About Ophir Optronics Solutions Ltd.

Ophir Optronics Solutions Ltd., a Part of MKS instruments, Inc. was founded in 1976, as an optical coating company that has grown and diversified into other areas. Ophir employs a highly-qualified staff of over 570 engineers, technicians and skilled workers. Our company products are sold worldwide through a distribution network that includes four fully certified calibration facilities and repair centers. The majority of Ophir's laser measuring instrumentation line is exported and marketed by sales representatives in more than 35 countries around the world, the largest markets being the USA, Europe and Japan.

About MKS instruments

MKS Instruments, Inc. is a global provider of instruments, subsystems and process control solutions that measure, control, power, monitor and analyze critical parameters of advanced manufacturing processes to improve process performance and productivity. MKS's products are derived from their core competencies in pressure measurement and control, materials delivery, gas composition analysis, control and information technology, power and reactive gas generation, vacuum technology, photonics, lasers, optics and motion control. MKS's primary served markets are manufacturers of capital equipment for thin film including semiconductor devices, process manufacturing, environmental, life sciences and scientific research.

Our Facilities

Sited in an impressive 10,400 sq.m. (112,500 sq.ft.) building in Jerusalem, Israel, Ophir's main manufacturing and R&D facility is fully equipped for both the production and testing of laser measuring instrumentation, optical components and coatings. In addition, Ophir's modern facilities have in-house capability for diamond turning, aspheric optics and electronic equipment assembly.

Ophir's wide-ranging activities include:

- Production of the most complete variety of laser measurement instrumentation in existence, both off-the shelf and Customized Solutions (OEM). Production of very high precision infrared and visible optical components: lenses, mirrors, metallic optics (spherical, aspherical and diffractive), windows, domes and prisms, suitable for military (FLIR) and industrial (CO_2) applications. Ophir, a qualified manufacturer for some of the world's leading suppliers of night vision equipment, is renowned for having developed some of the highest performing and most cost-effective optical systems in the world.
- Design and production of optical assemblies.
  Thin film optical coatings.
- Non-contact optical equipment for distance measurement and three-dimensional mapping of objects developed by Optimet, a company in which Ophir has a majority share. These devices are based on patented technology called Conoscopic Holography. Applications include dentistry microelectronics, robotics, quality control and mechanical shops.

Laser Development

The history of laser development has been characterized by ever-increasing laser powers and energies and increasingly concentrated laser beams. Medical, industrial and scientific applications of these high power and energy density lasers require reliable and accurate measurement of power and energy.
Meters for relatively high powers and energies generally operate by measuring the heat deposited onto an absorbing element.
The key to accurate and reliable measurement is the makeup of this absorbing surface. It must stand up to repeated use without degradation or change in calibration.
Laser sources are constantly growing in power, energy and beam concentration. Ophir has an ongoing program of development of durable absorbing surfaces that will continue to stand up to the most punishing laser sources as they grow in intensity and Ophir has some of the highest damage threshold absorbers in the industry.
Ophir - Spiricon - Photon brings the same leading edge innovation to laser beam profile measurement with its famous Pyrocam, its in house designed SP and Nanoscan cameras and BeamGage software.
Ophir's Laser Measurement Group products are used in three highly competitive and sophisticated fields: medical, industrial and research. Each of these areas is further divided into end users and OEMs.

Medical

Ophir is the largest producer of laser power and energy measurement equipment for the medical market, where Ophir's power measurement devices are incorporated into laser-based instrumentation. Our products are vital to medical laser manufacturers and to the hospitals and doctors who are end-user laser purchasers.
Medical lasers cover the entire spectrum of wavelengths from the 193 nm excimer laser to the 10.6 micron CO_2 laser where the main laser wavelengths are 193, 248, 532, 694, 755, 808, 1064, 2100, 2940 and 10600 nm. These lasers are used for general surgery, eye surgery, gynecology, ORL, dermatology and other applications. They have outputs which start at mW and mJ on the low end going up to tens of joules and hundreds of watts at the high end. The trend in medical lasers is to progress to more powerful systems, especially in the dermatology field, and to

introduce diode lasers and intense pulsed light (IPL) sources instead of the traditional gas or solid state lasers.
Ophir has developed special equipment that can for the first time measure the output of IPL sources.
Regulating bodies such as the FDA in the USA require the manufacturers to have at least one channel of power or energy monitoring in each laser. Ophir's high-quality OEM products provide an extraordinarily efficient answer to this requirement.

Industrial

Industrial laser customers include both laser manufacturers and laser users in job shops and factories. Ophir answers the needs of this market by providing measurement systems that have a high damage threshold and the ability to measure high repetition rates with high accuracy.
There are several main types of lasers for industrial and material processing applications: Fiber Lasers, Diode, Nd:YAG lasers and Solid-state/disk lasers in the range of 980-1070 nm with some systems in blue and green range. A significant market share still remains with CO_2 laser at 10.6 microns. They are characterized by their high power output, which ranges from 100W to 120kW, depending on the application. With its capabilities in power, energy and profile measurement, Ophir has developed many products for this market including an integrated Laser Beam Analyzer for industrial YAG lasers which measures beam profile, temporal profile, power and energy, all in one unit. A subset of the industrial market is the microelectronics industry, which uses excimer lasers for exposing the photoresist in the photolithography process. This process uses lasers with a short wavelength of 193 to 345 nm that operate at high repetition rate and high energy. The main factor influencing the component density possible on the microchip is the wavelength of the laser already used in the process, and therefore the trend is to progress to shorter wavelengths. Ophir has a range of unique products specified for the photolithography market, including off-the-shelf and Customized Solutions (OEM) products.

RoHS

Almost all Ophir and Spiricon Laser measurement products are RoHS compliant. The few products that are not RoHS are specified as such in the ordering information or in the specification tab.

ISO/IEC 17025:2017

The ISO/IEC 17025:2017 is given to calibration laboratories who have achieved the highest standards of quality, administration, and technical operations. Standing up to ISO/IEC 17025:2017 standard provides the opportunity for Ophir to serve as an international calibration laboratory.
This accreditation gives customers full confidence that Ophir works according to the highest standards, and among other things it provides for technical competence of staff, validity of methods, proper calibration and maintenance of equipment, and many other areas. Full documentation can be found on our website.

Ophir Power and Energy Meters – Versatility for Every Application

Ophir All-in-one instrument, sensor, power meter and computer interface system means that virtually any sensor can work “plug and play” with any power meter or computer interface. Ophir has the widest range of sensors on the market with the highest performance so almost any measurement needed can be accommodated. The measurement results can also be made accessible in many ways - on the power meter screen, stored on board, sent to a host computer with results presented in many ways and on several platforms.

Calibration Capability at Ophir

Calibration is perhaps the most important of our products. In order to ensure the best possible calibration of your instruments, Ophir takes a number of extra steps not taken by other vendors.

Laser absorption varies with wavelength, so it is not enough to calibrate at one wavelength. If the variation is small, then the sensors are calibrated at several laser wavelengths and each laser covers a range of wavelengths. If the absorption variation with wavelength is considerable, the sensor is provided with an absorption correction curve activated by the wavelength of use. Going one step further, Ophir checks the curve at a number of NIST and PTB traceable wavelengths and corrects it if necessary. To do this, we have a complete line of calibration lasers so that we can always calibrate at or near the customer's wavelength. These lasers include powers up to 6000W and both CW and pulsed lasers. We also have a number of sensors calibrated at NIST and PTB used as calibration standards. Below is a list of the calibration wavelengths used at Ophir in calibrating our standard catalog sensors.

In addition to calibration variation with wavelength, there are other possible sources of calibration error such as nonlinearity, variation with position on the surface and for pyroelectric sensors, pulse frequency. All of these factors are taken into consideration in the calibration and accounted for. For a complete analysis of Ophir calibration accuracy and error budget, please see our website at:
www.ophiropt.com/calibration-procedure/tutorial

Special Calibration

In addition to standard calibration wavelengths shown below, customers can have their Ophir sensor calibrated at additional wavelengths for more accuracy. Please consult your Ophir agent for special requests.

Wavelengths of Calibration per Sensor Type

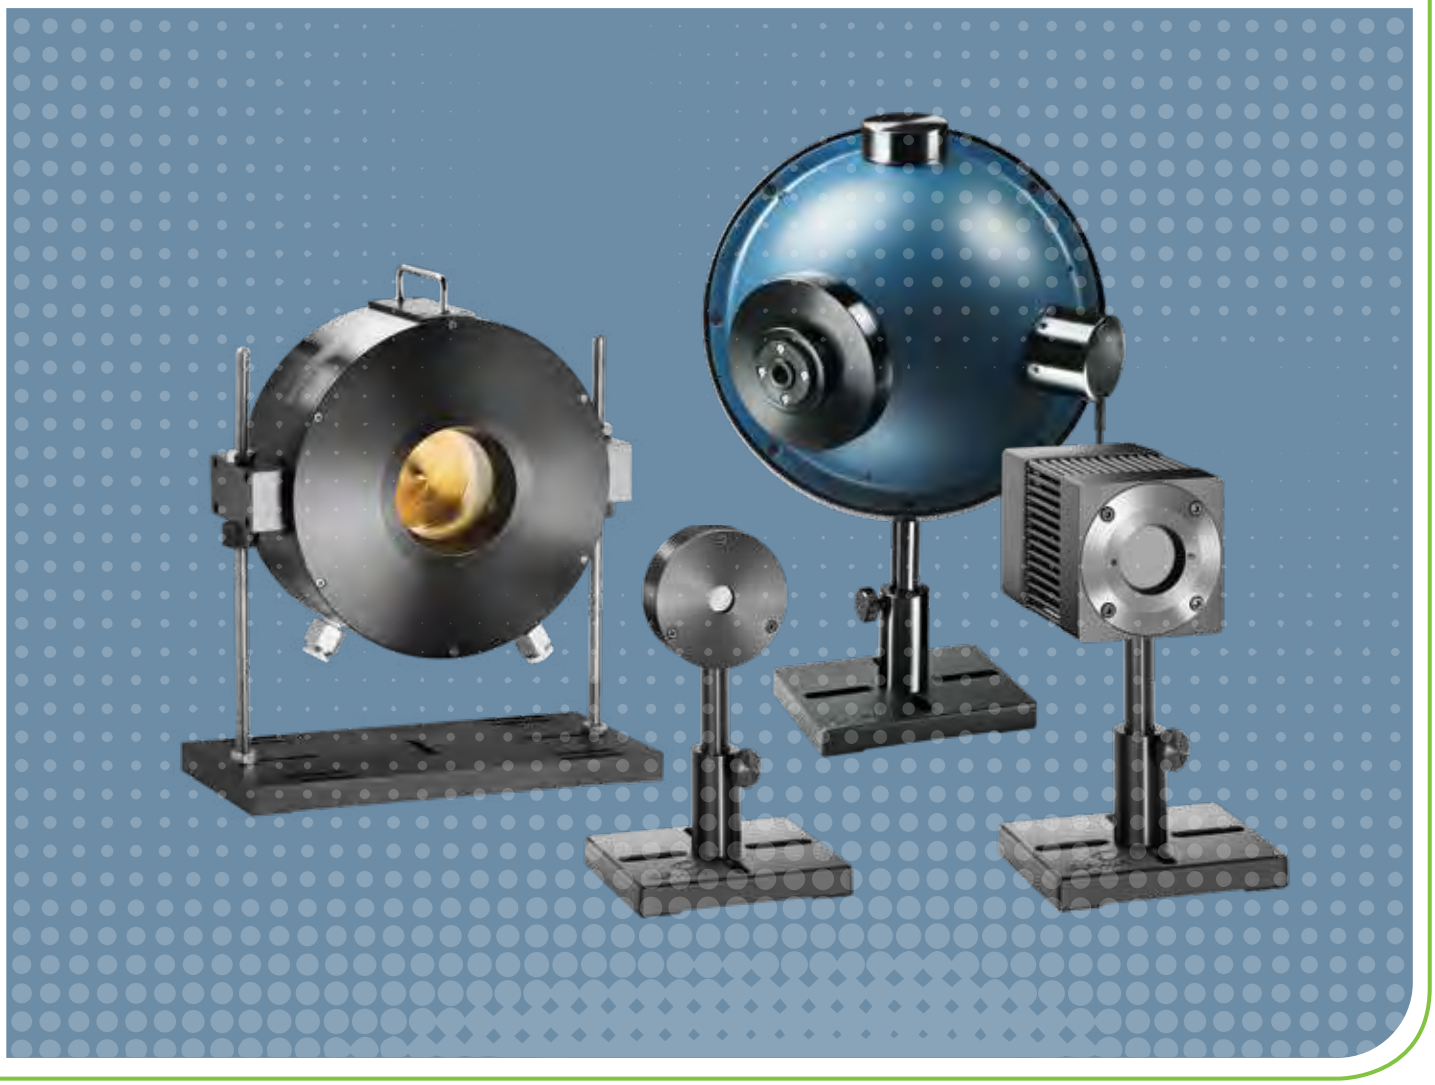
2022 SENSORS



Photodiode Power Sensors

Standard photodiode sensors – 10pW – 3W

Round photodiode sensors – 20pW – 3W

Special photodiode sensors – 50pW – 1W and 20mLux – 200kLux

Accessories for photodiode sensors

Accessories for PD300 series

Accessories for PD300R series, PD300-IRG, 3A-IS, IS-1-2W series and FPD series

Integrating spheres

Accessories for IS6

LED measurement – UV, VIS, NIR

LED Power Sensors 20pW - 3W

Sensor	Features	Aperture	Spectral Range	Power Range	Page
3A-IS	12mm aperture Integrating sphere for 350-1100nm, 3W	Ø12mm	350-1100nm	1µW-3W	40
PD300-UV	Photodiode with wide spectral range	10x10mm	200-1100nm	20pW-300mW	40
PD300R-UV	Same as PD300 with circular geometry for easy centering	Ø10mm	200-1100nm	20pW-300mW	40
3A	Very low powers	Ø9.5mm	190-20000nm	10µW-3W	40

LED Irradiance and Dosage Sensors 100nW/cm²-8W/cm²

Sensor	Features	Aperture	Spectral Range	Irradiance Range	Page
PD300RM-UV	Cosine corrected sensor for irradiance to 300mW/cm²	Ø8mm	200-850nm	100nW/cm²-300mW/cm²	42
PD300RM-8W	Cosine corrected sensor for irradiance to 8W/cm²	Ø8mm	350-850nm	1µW/cm²-8W/cm²	42
PD300RM-UVA	Cosine corrected sensor for irradiance to 15W/cm²	Ø2.75mm	350-450nm	1.5µW/cm²-15W/cm²	42

Thermal Power Sensors

Low noise lock in power sensors 300fW – 100mW

Sensor	Features	Aperture	Spectral Range	Power Range	Energy Range	Page
RM9	Radiometer for extremely low powers w/o chopper	Ø8mm	0.15-12µm	100nW-100mW	N.A.	44
RM9-THz	Radiometer for extremely low powers w/o chopper for THz	Ø8mm	0.1-30THz	100nW-100mW	N.A.	44
RM9-PD	Photodiode for extremely low powers w/o chopper	Ø8mm	0.2-1.1µm	300fW-300nW	N.A.	44
RM9 sensor and RMC1 Chopper	Complete set, RM9 with chopper	Ø8mm	0.15-12µm	100nW-100mW	N.A.	44
RM9-THz sensor and RMC1 Chopper	Complete set, RM9-THz with chopper	Ø8mm	0.1-30THz	100nW-100mW	N.A.	44
RM9-PD sensor and RMC1 Chopper	Complete set, RM9-PD with chopper measure to 300fW	Ø8mm	0.2-1.1µm	300fW-300nW	N.A.	44

High sensitivity thermal sensors – 8µW – 12W

Sensor	Features	Aperture	Spectral Range	Power Range	Energy Range	Page

FL250A-LP2-DIF-33	Fan cooled to 250W with diffuser for high power and energy density	Ø33mm	0.4-3µm	400mW-250W	400mJ-600J	61
FL250A-BB-50	Fan cooled to 250W, large aperture	Ø50mm	0.19-20µm	150mW-250W	80mJ-300J	62
FL250A-BB-50-PPS	Power, position & size to 250W, large aperture	Ø50mm	0.19-20µm	150mW-250W	80mJ-300J	64
FL400A-BB-50	Fan cooled to 500W	Ø50mm	0.19-20µm	300mW-500W	75mJ-600J	62
FL400A-LP2-50	Fan cooled to 400W, high power densities and long pulses	Ø50mm	0.35-2.2µm, 10.6µm	100mW-500W	250mJ-600J	62
FL600A-BB-65	Fan cooled to 600W	Ø65mm	0.19-11µm	5W-600W	600mJ-600J	63
FL600A-LP2-65	Fan cooled to 600W for long pulsed lasers	Ø65mm	0.35-2.2µm	5W-600W	600mJ-600J	63
FL1100A-BB-65	Fan cooled to 1100W	Ø65mm	0.19-11µm	5W-1100W	600mJ-600J	63
FL1100A-LP2-65	As above for high power densities and long pulses	Ø65mm	0.35-2.2µm	5W-1100W	600mJ-1000J	63

High power thermal sensors – 0.5W – 6000W

Sensor	Features	Aperture	Spectral Range	Power Range	Energy Range	Page
L250W	Thin profile, 20mm thick, water cooled to 250W	Ø50mm	0.19-20µm	1W-250W	120mJ-200J	66
L300W-LP2-50	Thin profile, 20mm thick, water cooled to 300W	Ø50mm	0.35-2.2µm, 10.6µm	0.5W-300W	200mJ-300J	66
1000W-BB-34	Water cooled to 1000W	Ø34mm	0.19-20µm	5W-1000W	400mJ-300J	67
1000W-BB-34-QUAD	Power & position, high powers up to 1000W	Ø34mm	0.19-20µm	5W-1000W	500mJ-300J	64
1000WP-BB-34	Water cooled to 1000W with non-contaminating water circuit	Ø34mm	0.19-20µm	5W-1000W	400mJ-300J	67
1000W-LP2-34	Water cooled to 1000W, high power densities and long pulses	Ø34mm	0.35-2.2µm	5W-1000W	400mJ-300J	67
L1500W-BB-50	Water cooled to 1500W	Ø50mm	0.19-20µm	15W-1500W	500mJ-200J	68
L1500W-LP2-50	As above, high power densities and long pulses	Ø50mm	0.35-2.2µm	15W-1500W	500mJ-200J	68
L2000W-BB-120	Water cooled to 2000W. Very large aperture 120mm	Ø120mm	0.19-20µm	1W-2000W	6J-6000J	69
L2000W-PF-120	As above, high damage threshold for short pulses	Ø120mm	0.3-2.2µm	1W-2000W	6J-6000J	69
L100(500)A-PF-120	For short exposures, measure energies to 6000J	Ø120mm	0.15-20µm	1W-500W	6J-6000J	69
5000W-BB-50	Water cooled to 5000W	Ø50mm	0.19-20µm	20W-5000W	N.A.	70
5000W-LP2-50	As above, high power densities and long pulses	Ø50mm	0.35-2.2µm	20W-5000W	N.A.	70
5000WP-LP2-50	Water cooled to 5000W for non-contaminating water flow	Ø50mm	0.35-2.2µm	20W-5000W	N.A.	70
6K-W-BB-200x200	Very large aperture 198x198mm to 6000W. Calorimetric measurement	198x198mm	0.19-20µm	200W-6000W	N.A.	71

Very high power water cooled thermal sensors 100W – 120kW

Sensor	Features	Aperture	Spectral Range	Power Range	Energy Range	Page
10K-W-BB-45	Water cooled to 11,000W, very high power densities	Ø45mm	0.8-2µm, 10.6µm	100W-11kW	N.A.	72
15K-W-BB-45	Water cooled to 15,000W, high power densities	Ø45mm	0.8-2µm, 10.6µm	100W-15kW	N.A.	73
16K-W-BB-55	Water cooled to 16,000W, over temperature alarm and interlock	Ø55mm	0.8-2µm, 10.6µm	100W-16kW	N.A.	73
30K-W-BB-74	Water cooled to 30,000W, high power densities	Ø74mm	0.8-2µm, 10.6µm	100W-30kW	N.A.	74
120K-W	Water cooled to 120,000W, Highest powers	Ø200mm	0.9-1.1µm	10kW-120kW	N.A.	74

Short exposure high power sensors

Sensor	Features	Aperture	Spectral Range	Power Range	Energy Range	Page
Helios Plus - Profinet	No water cooling meter for short exposures up to 12kW, Profinet	Ø50mm	450-550nm, 900-1100nm	50W-12kW	100J-5kJ	75
Helios Plus - EtherNet/IP	No water cooling meter for short exposures up to 12kW, EtherNet/IP	Ø50mm	450-550nm, 900-1100nm	50W-12kW	100J-5kJ	75
Helios Plus - EtherNet/IP-M	No water cooling meter for short exposures up to 12kW, EtherNet/IP, M12 connector for data, Mini 7/8" connector for power	Ø50mm	450-550nm, 900-1100n	50W-12kW	100J-5kJ	75
Helios Plus - EtherCAT	No water cooling meter for short exposures up to 12kW, EtherCAT	Ø50mm	450-550nm, 900-1100n	50W-12kW	100J-5kJ	75
Ariel	No water cooling meter for CW and short exposures up to 8kW, LCD, Bluetooth, USB.	Ø32mm	440-550nm, 900-1100nm, 2.94µm, 10.6µm	200mW-8kW	Up to 2.4kJ	77
L40(250)A-LP2-50	As above for high power densities and long pulses	Ø50mm	0.25-2.2µm, 2.94µm	300mW-250W	100mJ-10,000J	79
L40(500)A-LP2-DIF-35	CW to 35W, intermittent to 500W, high damage threshold	Ø35mm	0.44-2.2µm	300mW-500W	100mJ-2000J	79
L30C-LP2-26-SH	As above for high power densities and long pulses	Ø26mm	0.25-2.2µm	10W-100W	30mJ-2000J	79
Comet 1K	Portable low-cost power probe with low powers	Ø50mm	0.2-20µm	20W-1000W	N.A.	80
Comet 10K	Portable low-cost power probe with high powers	Ø100mm	0.98-1.07µm and 10.6µm	200W-10,000W	N.A.	80
Comet 10K-HD	Portable low-cost power probe with high damage threshold	Ø55mm	0.98-1.07µm and 10.6µm	200W-10,000W	N.A.	80

Beam dumps up to 11kW

Sensor	Features	Aperture	Spectral Range	Power Range	Energy Range	Page
BDFL500A-BB-50	Fan cooled beam dump up to 500W	Ø50mm	0.19-20µm	up to 500W	N.A.	81
BDFL1500A-BB-65	Fan cooled beam dump up to 1500W	Ø65mm	0.19-20µm	up to 1500W	N.A.	81
BD5000W-BB-50	Water cooled beam dump up to 5000W	Ø50mm	0.19-20µm	up to 5000W	N.A.	81
BD10K-W	Water cooled beam dump up to 11,000W	Ø45mm	0.8-20µm	up to 11kW	N.A.	81

Accessories for high power water cooled sensors

Accessory	Description	Page
QBH-L-Fiber Adapter	Mounting fibers with QBH termination to L1500W-LP2-50, L1500W-BB-50, 5000W-LP2-50 and 5000W-BB-50 sensors, for low numerical apertures	82
QBH-S-Fiber Adapter	Mounting fibers with QBH termination to L1500W-LP2-50, L1500W-BB-50, 5000W-LP2-50 and 5000W-BB-50 sensors, for high numerical apertures	82
1000W / L1500W Protective Housing	Housing with shutter to protect 1000W and L1500W sensors from contamination with debris	83
5000W/10K-W/15K-W Protective Housing with Shutter	Housing with shutter to protect 5000W, 10K-W and 15K-W sensors from contamination with debris	84
10K-W and 15K-W Scatter Shield	Shield to mount on front flange of 10K-W and 15K-W sensors. Reduces backscatter of radiation by 2/3	85
16K-W Scatter Shield	Shield to mount on front flange of 16K-W sensor. Reduces backscatter of radiation by 2/3	85
30K-W Scatter Shield	Shield to mount on front flange of 30K-W sensor. Reduces backscatter of radiation by 2/3	85
Heavy Duty Stand for 10K-W/15K-W	Heavy Duty Stand for 10K-W and 15K-W	85
Metric Water Fittings for water cooled sensors	Water connectors for metric size tubing instead of standard inch size	86
1000W/1500W/5000W/10K-W/15K-W Protective Cover	Housing with shutter to protect sensors from contamination with debris	86
10K-W / 15K-W Scatter Shield Cover	10K-W and 15K-W with Scatter Shield	86
16K-W Protective Cover	Protective cover with target pattern for 16K-W (one supplied with device)	86
16K-W Scatter Shield Cover	16K-W with Scatter Shield	86
30K-W Protective Cover	Protective cover with target pattern for 30K-W (one supplied with device)	86
30K-W Scatter Shield Cover	30K-W with Scatter Shield	86

BeamTrack - Power / Position / Size Sensors

Sensor	Features	Aperture	Spectral Range	Power Range	Energy Range	Page
3A-QUAD	Power & position, very low powers up to 3W	Ø9.5mm	0.19-20µm	100µW-3W	20µJ-2J	90
3A-P-QUAD	As above for short pulse laser	Ø12mm	0.15-8µm	160µW-3W	30µJ-2J	90
10A-PPS	Power, position & size to 10W	Ø16mm	0.19-20µm	20mW-10W	6mJ-2J	90
50(150)A-BB-26-QUAD	Power & position to 50W, 150W intermittent	Ø26mm	0.19-20µm	40mW-150W	20mJ-100J	91
50(150)A-BB-26-PPS	Power, position & size to 50W, 150W intermittent	Ø26mm	0.19-20µm	40mW-150W	20mJ-100J	91
F150A-BB-26-PPS	Power, position & size to 150W	Ø26mm	0.19-20µm	50mW-150W	20mJ-100J	91
FL250A-BB-50-PPS	Power, position & size to 250W, large aperture	Ø50mm	0.19-20µm	150mW-250W	80mJ-300J	92
1000W-BB-34-QUAD	Power & position, high powers up to 1000W	Ø34mm	0.19-20µm	5W-1000W	500mJ-300J	92

Accessories for Thermal Sensors

Fiberoptic adapters

Accessory	Description	Page
Thermal F.O. adapters	Adapters for mounting fibers to thermal sensors (ST, FC, SMA, SC)	93

Accessories for high power sensors

Accessories

Accessory	Description	Page
High Power QBH-Fiber Adapters for L1500W-LP2-50, L1500W-BB-50, 5000W-LP2-50 and 5000W-BB-50 Sensors	QBH-Fiber Adapters for mounting fibers with QBH termination to Ophir power sensors	94
Protective Housing for 1000W, L1500W, 5000W, 10k-W and 15k-W sensors	Protective housing with shutter providing protection from debris of material working process	94
Scatter Shield for 10K-W, 15K-W, 16K-W and 30K-W sensors	Shield to mount on front flange of the sensors. Reduces backscatter of radiation by 2/3	94
Protective covers for Scatter Shields for 10K-W, 15K-W, 16K-W and 30K-W	Protective Cover to mount on Scatter Shields protecting the Shield from debris of material working process	94
Protective Covers with Target	Protective cover with target pattern for 1000W/L1500W/5000W/10K-W/15K-W, 16K-W and 30K-W	94
Metric Water Connectors for water cooled sensors	Water connectors for metric size tubing instead of standard inch size	94
Heavy Duty Stand for 10K-W/15K-W	Heavy Duty Stand for 10K-W and 15K-W	94

General accessories

Accessories

Accessory	Description	Page
SH to BNC Adapter	Allows connection of sensor to current or voltage measuring device for measurement of raw sensor output	94

Replacement parts

Accessories

Accessory	Description	Page
N Polarity Power Supply/Charger 12V 2A N-2.1x5.5	Negative Polarity Power Supply/Charger for Centauri, Vega, Nova II, LaserStar, Nova, Pulsar, Quasar, EA-1, 120K-W, 6K-W and Fan Cooled Sensors	94
P Polarity Power Supply/Charger 12V 2A P-1.35x3.5	Positive Polarity Power Supply/Charger for StarLite, StarBright and RM9 Chopper	94

Photodiode and Pyroelectric Energy Sensors

Photodiode energy sensors – 10pJ – 15µJ

Sensor	Features	Aperture	Spectral Range	Energy Range	Maximum Frequency	Page
PD10-C	Very low energies down to nJ, Silicon photodiode	Ø10mm	0.19-1.1µm	1nJ-20µJ	20,000Hz	99
PD10-IR-C	Very low energies down to nJ, Germanium photodiode	Ø5mm	0.7-1.8µm	1nJ-600nJ	10,000Hz	99
PD10-pJ-C	Lowest energies down to pJ, Silicon photodiode	Ø10mm	0.2-1.1µm	10pJ-200nJ	20,000Hz	99
PD10-IR-pJ-C	Lowest energies down to pJ, Germanium photodiode	Ø5mm	0.7-1.8µm	30pJ-20nJ	10,000Hz	99

Pyroelectric energy sensors – 0.1µJ – 10J

Sensor	Features	Aperture	Spectral Range	Energy Range	Maximum Frequency	Page
PE9-C	Pyroelectric for very low energies	Ø8mm	0.15-12µm	0.2µJ-1mJ	25,000Hz	100
PE9-ES-C	Pyroelectric for lowest energies	Ø8mm	0.15-12µm	0.1µJ-200µJ	20,000Hz	100
PE10-C	Pyroelectric for low energies	Ø12mm	0.15-12µm	1µJ-10mJ	25,000Hz	101
PE10BF-C	As above, high damage threshold	Ø12mm	0.15-3µm, 10.6µm	7µJ-10mJ	250Hz	101
PE25-C	Medium aperture pyroelectric	Ø24mm	0.15-3µm	8µJ-10J	10,000Hz	102
PE25BF-C	As above, high damage threshold	Ø24mm	0.15-3µm, 10.6µm	60µJ-10J	250Hz	102
PE50-C	Large aperture pyroelectric	Ø46mm	0.15-3µm	10µJ-10J	10,000Hz	103
PE50BF-C	As above, high damage threshold	Ø46mm	0.15-3µm, 10.6µm	120µJ-10J	250Hz	103

High energy pyroelectric sensors – 10µJ – 40J

Sensor	Features	Aperture	Spectral Range	Energy Range	Maximum Frequency	Page
PE50-DIF-C	Pyroelectric with diffuser, high repetition rate. Complete calibration curve	Ø35mm	0.19-2.2µm, 2.94µm	20µJ-10J	10,000Hz	104
PE50U-DIFH-C	Pyroelectric with diffuser, very high damage threshold, 193nm calibration	Ø35mm	0.19-2.2µm, 2.94µm	100µJ-10J	10,000Hz	104
PE25BF-DIF-C	Pyroelectric with diffuser for high damage threshold. Complete calibration curve	Ø20mm	0.24-2.2µm	100µJ-10J	250Hz	104
PE50BF-DIF-C	Pyroelectric with diffuser for high damage threshold. Complete calibration curve	Ø35mm	0.19-2.2µm, 2.94µm	200µJ-10J	250Hz	105
PE50BF-DIFH-C	Similar to PE50BF-DIF-C but with higher damage threshold	Ø35mm	0.19-2.2µm, 2.94µm	200µJ-10J	250Hz	105
PE50BB-DIF-C	Pyroelectric with removable diffuser. Wide spectral range w/o diffuser	Ø46mm Ø33mm with diffuser	0.19-20µm, 0.4-2.5µm with diffuser	100µJ-40J	40Hz	105
PE50-DIF-ER-C	Pyroelectric with removable diffuser. Especially for Erbium laser	Ø46mm Ø33mm with diffuser	0.19-3µm, 0.4-3µm with diffuser	10µJ-30J	10,000Hz	107
PE100BF-DIF-C	Largest aperture pyroelectric with removable diffuser	Ø96mm Ø85mm with diffuser	0.15-3µm, 0.4-2.5µm with diffuser	400µJ-40J	200Hz	107
FPE80BF-DIF-C	Fan cooled pyroelectric for high ave powers to 200W	Ø53mm	0.19-2.2µm, 2.94µm	1mJ-40J	250Hz	108
PE80BF-DIF-C	Pyroelectric with diffuser for high power densities	Ø67mm	0.19-2.2µm, 2.94µm	4mJ-40J	250Hz	108

Energy Sensors Accessories

Accessories for pyroelectric sensors

Fiberoptic adapters

Accessory	Description	Page
Pyroelectric F.O. Adapters	Adapters for mounting fibers to pyroelectric sensors (ST, FC, SMA, SC)	109

Accessories

Accessory	Description	Page
Removable Heat Sink	Heat sink that is fastened to rear of PE-C sensors. Allows average power ~50-70% higher than without heat sink	109
Scope Adapter	Plugs in between the PE sensor and power meter. Provides BNC output to scope to see every pulse up to the maximum frequency of the sensor	109
Beam Splitter Assembly	Beam Splitter Assembly to measure pulsed laser sources too energetic for direct measurement. Use with the Beam Splitter can be calibrated by setting the laser to a lower energy that will not damage the sensor and swiveling between position A and B and then taking the ratio of A and B	109
Nova PE-C Adapter	The adapter plugs between the Nova D15 socket and the smart plug of the PE-C sensor to allow the Nova to operate with PE-C series sensors. See PE-C spec sheet for details	110
Damage Threshold Test Plates	Test plates with same absorber coating as the sensor. For testing that laser beam is not above damage threshold (1 such plate is included with sensor package). There are test plates of the following types: Metallic, BB, BF and THz	110
PE-C to PE Size Adapter	The newer PE-C series sensors have a Ø62mm diameter. The older PE series sensors have a Ø85mm diameter. This adapter allows using the PE-C type sensors in jigs and setups that were originally designed for PE sensors	110
N Polarity Power Supply/Charger AC/DC 12V 2A N-2.1x5.5	Negative Polarity Power Supply/Charger for FPE80BF-DIF-C sensor	110

Pulse Characterization Sensors

Fast photodiode detectors (FPD)

Sensor	Features	Active Area	Spectral Range	Rise Rime / Fall Time	Bandwidth	Page
FPS-1	For measuring temporal characteristics for UV radiation	Ø1.02mm	193-1100nm	1.5 nsec	233 MHz	113
FPD-UV-3000	As above with rise time of 3 nsec & M20x1 thread	Ø2.55mm	193-1100nm	3 nsec	>118 MHz	113
FPD-VIS-300	For measuring temporal characteristics for VIS radiation	Ø0.4mm	320-1100nm	<0.3 nsec	>1.2 GHz	113
FPD-IG-175	As above for 900-1700nm radiation & rise time of 175 psec	Ø0.1mm	900-1700nm	<0.175 nsec	>2 GHz	113
FPD-IG-125	As above for 900-1700nm radiation & rise time of 25 psec	Ø0.032mm	900-1700nm	<0.025 nsec	>15 GHz	113

Accessories for fast photodiode detector (FPD) series

Fiberoptics Adapters

Accessory	Description	Page
FPD F.O. adapters	Adapters for mounting fibers to FPD sensors (ST, FC, SMA, SC)	113

Accessories

Accessory	Description	Page
ND1 Attenuator	ND1 nom. X10 attenuator	113
ND2 Attenuator	ND2 nom. X50 attenuator	113
IS6 for FPD Adapter	Adapters for mounting FPD sensor series to IS6 integrating spheres	113
IS6 for FPS-1 Adapter	Adapters for mounting FPS-1 sensor to IS6 integrating spheres	113

Customized Solutions (OEM) Power and Energy Sensors

Standard customized solutions (OEM) thermal and photodiode sensors – 100pW – 600W

Sensor	Features	Aperture	Spectral Range	Power Range [a]	Size	Page
3A-UA	Low power, built in amplifier (RS232/analog)	Ø9.5mm	0.19-20µm	100µW-3W	50x50x38mm	119
PD300-UAS	Compact, photodiode, built in amplifier (RS232/analog)	10x10mm	0.2-1.1µm	100pW-50mW	38x38x32mm	119
20C-SH	Compact smart sensor	Ø12mm	0.19-20µm	10mW-20W	38x38x14mm	120
20C-UAS	Compact, built in amplifier (RS232/analog)	Ø12mm	0.19-20µm	10mW-20W	38x38x34mm	120
20C-UAU	Compact, external amplifier (USB)	Ø12mm	0.19-20µm	10mW-20W	38x38x14mm	120
20C-UAE	Compact, external amplifier (Ethernet)	Ø12mm	0.19-20µm	10mW-20W	38x38x14mm	120
L30C-SH	Medium aperture, smart sensor	Ø26mm	0.19-20µm	300mW-100W	60x60x38mm	121
L30C-LP2-26-SH	As above with LP2 absorber for high pulse energies	Ø26mm	0.25-2.2µm	300mW-100W	60x60x38mm	121
L30C-UAF	Medium aperture, built-in amplifier (RS232/analog)	Ø26mm	0.19-20µm	300mW-100W	60x60x38mm	121
L30C-UAU	Medium aperture, built-in amplifier (USB)	Ø26mm	0.19-20µm	300mW-100W	60x60x38mm	121
L30C-UAE	Medium aperture, built-in amplifier (Ethernet)	Ø26mm	0.19 -20µm	300mW-100W	60x60x38mm	121
100C-SH	Low profile, smart sensor	Ø18mm	0.19-20µm	60mW-100W	48x48x14.5mm	122
100C-UAF	Low profile, separate amplifier (RS232/analog)	Ø18mm	0.19-20µm	60mW-100W	48x48x14.5mm	122
100C-UAU	Low profile, separate amplifier (USB)	Ø18mm	0.19-20µm	60mW-100W	48x48x14.5mm	122
100C-UAE	Low profile, separate amplifier (Ethernet)	Ø18mm	0.19-20µm	60mW-100W	48x48x14.5mm	122

Sensor Finder Program

Finding the proper sensor(s) to meet your measurement needs has never been easier. With our sensor finder program just enter your laser parameters and the proper measuring sensors for your application will be displayed on the screen. The program calculates the power and energy density capabilities of each absorber, based on the laser wavelength, pulse length, repetition rate and other relevant parameters. It also compares all the other requirements such as maximum and minimum power, energy, beam size, etc.

In addition to finding the right sensor for your application, the Sensor Finder Program offers the following features:
- Report printing
- How close the recommended sensors are to the specified damage threshold
- Calculation of input power and energy density and average power
- Tips on further action if no solution is found

Order of Selection

The sensors are selected in terms of cost effectiveness and ease of use, i.e. photodiode sensors and thermopiles are selected first and then pyroelectric sensors. If you want to measure only power, pyro sensors will not be selected even if they could operate within all other given laser parameters.

Aperture

Since it is not practical to allow the beam to fill the entire aperture, the sensors are selected so that the sensor aperture is always at least 2mm or 10% larger than the beam. If the beam is rectangular its corners can touch the aperture.

Using the Sensor Finder Program

The Sensor Finder Program is available for use online at:
www.ophiropt.com/sensor-finder

It can also be downloaded for use on your own PC at:
www.ophiropt.com/sensor-finder-download

Sensor Finder Input Screen

1. When the program is started, the above screen appears: In Step 1, Select the laser type [CW or pulsed], the beam type [flat top or Gaussian and if flat top, circular or rectangular] and whether you wish to measure both power and energy or just laser power.

2. In Step 2, Enter the required laser parameters: beam diameter, wavelength, max/min power or max/min energy, rep rate and pulse width. If minimum power is not entered, then the program assumes the minimum is ½ the maximum.
   If desired, enter these optional criteria: exposure time – the maximum time the sensor measures at a time. If you only plan to measure the laser power for short periods at a time, Ophir offers more compact sensors for intermittent use.
   Sensor size – only sensors smaller than the specified dimensions will be selected.

3. In Step 3 click “Find Sensor”.

4. The sensors that meet specified criteria will be listed in the output screen shown below. The sensor type and how close to the damage threshold are listed for each result. The input parameters are listed on top.

5. In order to find compatible displays, click “Meter Finder”. In order to find compatible PC interfaces click “PC Interfaces”.

6. To save the results, click “Save”. To print the results, click “Print”.

Sensor Finder Output Screen

Damage Threshold

Some sensors are closer to the laser damage threshold than others. Since the damage threshold can vary somewhat from case to case and also is cumulative, the Sensor Finder Program mentions how close a particular sensor is to the damage threshold. The displayed percent of damage threshold is the highest of either the power or the energy threshold. It is recommended to select a sensor that is less than 50% of the damage threshold.

Power/Energy Meters

In order to find power/energy meters or PC interfaces that are compatible with various sensors, click "Meter Finder" or "PC Interfaces". Note that some of the newer sensors, such as the Pyro-C line sensors are only compatible with the newer meters and PC interfaces.

Types of Power/Energy Sensors

Power and Single Shot Energy Sensors

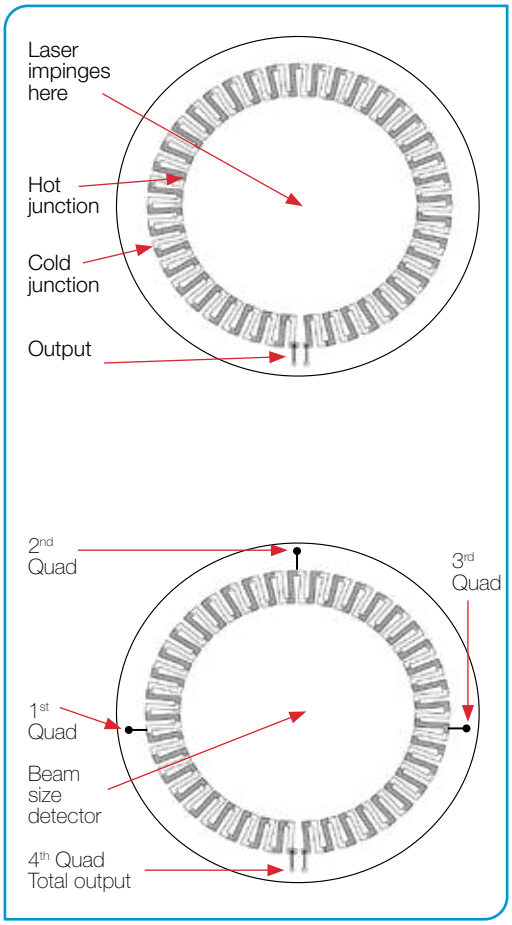
Ophir provides two types of power sensors: Photodiode sensors and Thermal sensors. Photodiode sensors are used for low powers from picowatts up to hundreds of milliwatts and as high as 3W. Thermal sensors are for use from fractions of a milliwatt up to thousands of watts. Thermal sensors can also measure single shot energy at pulse rates not exceeding one pulse every ~5s.

Repetitive Pulse Energy Sensors

For higher pulse rates, Ophir has Pyroelectric energy sensors able to measure pulse rates up to tens of kHz. These are described in the energy sensor section, section 1.2.

Thermal Sensors

The thermopile sensor has a series of bimetallic junctions. A temperature difference between any two junctions causes a voltage to be formed between the two junctions. Since the junctions are in series and the «hot» junctions are always on the inner, hotter side, and the «cold» junctions are on the outer, cooler side, radial heat flow on the disc causes a voltage proportional to the power input. Laser power impinges on the center of the thermopile sensor disc (on the reverse side of the thermopile), flows radially and is cooled on the periphery. The array of thermocouples measures the temperature gradient, which is proportional to the incident or absorbed power. In principle, the reading is not dependent on the ambient temperature since only the temperature difference affects the voltage generated and the voltage difference depends only on the heat flow, not on the ambient temperature. Since all the heat absorbed flows through the thermocouples (as long as the laser beam is inside the inner circle of hot junctions), the response of the detector is almost independent of beam size and position. If the beam is close to the edge of the inner circle, some thermocouples become hotter than others but since the sum of all of them is measured, the reading remains the same. Generally, Ophir specifies ±2% uniformity of reading over the surface or better.



BeamTrack Power / Position / Size sensors

The BeamTrack Thermal sensors can measure beam position and beam size as well as power. This innovative device provides an additional wealth of information on your laser beam – centering, beam position and wander, beam size as well as power and single shot energy. The BeamTrack sensor is illustrated schematically here and works as follows: the signal coming from the sensor is now divided into 4 quadrants so by measuring and comparing the output from the 4 sections we can determine the position of the center of the beam to a high degree of accuracy. In addition to the 4 quadrants, there is now a special proprietary beam size detector. After processing outputs from these various detectors, the user is presented with the beam position as well as beam size. Note that the beam size is calibrated only for a Gaussian beam of >3mm but for other beams it will give relative size information and will indicate if the beam is changing size. For more information on the BeamTrack sensors, please see section 1.1.3.

Using Power Sensors to Measure Single Shot Energy

Although Ophir Thermal power sensors are used primarily to measure power, they can measure single shot energy as well where they integrate the power over time flowing through the disc and thus measure energy. Since the typical time it takes for the disc to heat up and cool down is several seconds, these Thermal sensors can only measure one pulse every several seconds at most. Thus they are suitable for what is called “single shot” measurement. Although the response time of the sensor discs is slow, there is no limit to how short the pulses measured are since the measurement is of the heat flowing through the disc after the pulse.

Single shot energy can also be used to measure high power laser power. The sensor is exposed to a pulse of the laser power on the order of 0.3– 2s and the energy measured is converted to a power reading. In this way, a relatively small non water cooled sensor can measure powers up to over 10,000W. See “Short Exposure High Power Sensors” section on page 81-86.

Pyroelectric Sensors

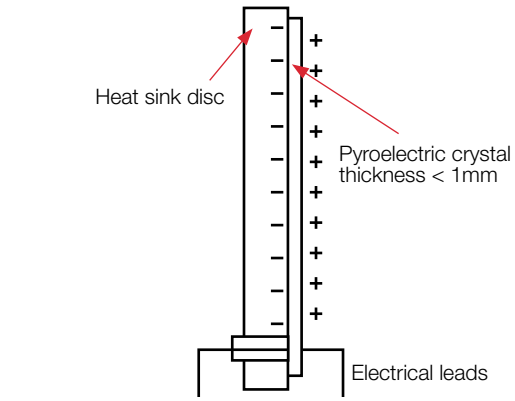
Pyroelectric type sensors are useful for measuring the energy of repetitively pulsed lasers at up to 25,000Hz and are sensitive to low energies.
They are less durable than Thermal types and therefore should not be used whenever it is not necessary to measure the energy of each pulse and average power measurement is sufficient.
Pyroelectric sensors use a Pyroelectric crystal that generates an electric charge proportional to the heat absorbed. Since the two surfaces of the crystal are metalized, the total charge generated is collected and therefore the response is not dependent on beam size or position. This charge then charges a capacitor in parallel with the crystal and the voltage difference thus generated is proportional to the pulse energy. After the energy is read by the electronic circuit, the charge on the crystal is discharged to be ready for the next pulse.

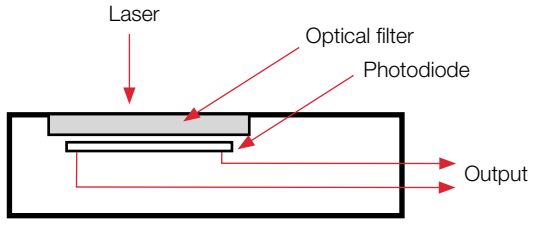
Photodiode Sensors for Lower Powers

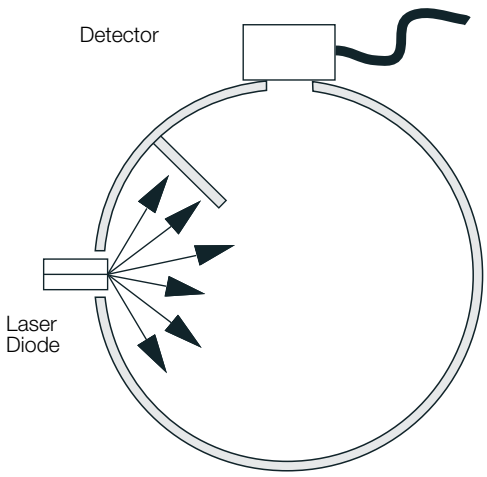
In addition to the Thermal sensors described above, Photodiode sensors are used for low powers from picowatts up to hundreds of milliwatts and as high as 3W.
A Photodiode sensor is a semiconductor device that produces a current proportional to light intensity and has a high degree of linearity over a large range of light power levels - from fractions of a nanowatt to about 2mW. Above that light level, corresponding to a current of about 1mA, the electron density in the Photodiode becomes too great and its efficiency is reduced causing saturation and a lower reading. Most Ophir PD sensors have a built-in filter that reduces the light level on the detector and allows measurement up to 3W without saturation.

Integrating Spheres

Integrating Spheres are meant to measure divergent light sources such as LEDs. The light is introduced to the sphere through the input port, and reflected many times by the highly reflecting diffuse surface of the inner wall of the sphere until it uniformly illuminates the inner surface of the sphere. A detector samples a given small fraction of this light and thus can be used to measure the total power input into the sphere. Ophir integrating spheres have a highly reflecting diffuse white coating for high efficiency and readings that are independent of beam size, position and divergence. This integrating sphere configuration is ideal for a divergent beam such as from a laser diode. Ophir also offers integrating spheres configured for measuring collimated laser beams. Ophir has spheres of various sizes for covering UV, visible, NIR lasers up to 30 Watts. There is a North Pole auxiliary port suitable for picking off a small amount of light via an SMA fiber for wavelength measurement or any further analysis without affecting the overall system calibration. To maintain accuracy and guarantee performance, annual integrating sphere detector calibration is recommended.





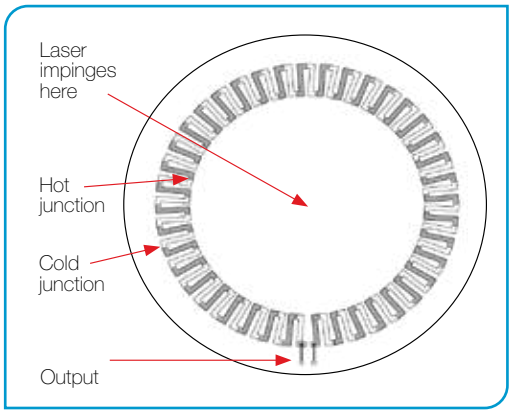


2022 POWER SENSORS 1.1

SENSORS

Thermal Sensors

As described in the general introduction, the thermopile sensor has a series of bimetallic junctions. A temperature difference between any two junctions causes a voltage to be formed between the two junctions. Since the junctions are in series and the «hot» junctions are always on the inner, hotter side, and the «cold» junctions are on the outer, cooler side, radial heat flow on the disc causes a voltage proportional to the power input. Laser power impinges on the center of the thermopile sensor disc (on the reverse side of the thermopile), flows radially and is cooled on the periphery. The array of thermocouples measures the temperature gradient, which is proportional to the incident or absorbed power. In principle, the reading is not dependent on the ambient temperature since only the temperature difference affects the voltage generated and the voltage difference depends only on the heat flow, not on the ambient temperature.



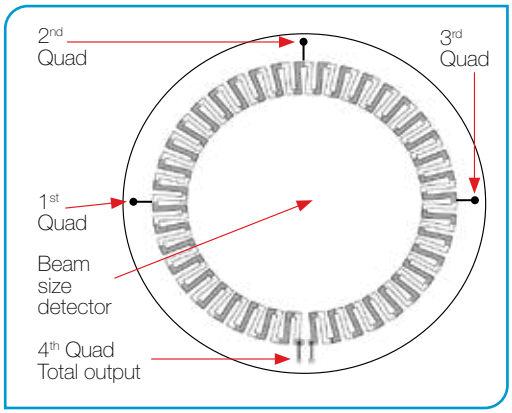
Since all the heat absorbed flows through the thermocouples (as long as the laser beam is inside the inner circle of hot junctions), the response of the detector is almost independent of beam size and position. If the beam is close to the edge of the inner circle, some thermocouples become hotter than others but since the sum of all of them is measured, the reading remains the same. Generally, Ophir specifies ±2% uniformity of reading over the surface or better.

Using Power Sensors to Measure Single Shot Energy

Although Ophir Thermal power sensors are used primarily to measure power, they can measure single shot energy as well, where they integrate the power flowing through the disc over time and thus measure energy. Since the typical time it takes for the disc to heat up and cool down is several seconds, these Thermal sensors can only measure one pulse every several seconds at most. Thus they are suitable for what is called “single shot” measurement. Although the response time of the sensor discs is slow, there is no limit to how short the pulses measured are since the measurement is of the heat flowing through the disc after the pulse.

BeamTrack Power / Position / Size sensors

The BeamTrack Thermal sensors can measure beam position and beam size as well as power. This innovative device provides an additional wealth of information on your laser beam – centering, beam position and wander, beam size as well as power and single shot energy. The BeamTrack sensor is illustrated schematically here and works as follows: the signal coming from the sensor is now divided into 4 quadrants so by measuring and comparing the output from the 4 sections we can determine the position of the center of the beam to a high degree of accuracy. In addition to the 4 quadrants, there is now a special proprietary beam size detector. After processing outputs from these various detectors, the user is presented with the beam position as well as beam size. Note that the beam size is calibrated only for a Gaussian beam of >3mm but for other beams it will give relative size information and will indicate if the beam is changing size. For more information on the BeamTrack sensors, please see section 1.1.3.



Types of Thermopile Discs

There is no single absorber which meets the needs of all applications. Ophir has developed several types for different applications, such as long pulses (0.1-10ms), short pulses (<1µs) and continuous radiation. Absorbers optimized for long pulses and CW are characterized by thin, refractory materials, since the heat can flow through the coating and into the disc during the pulse. On the other hand, heat cannot flow during short pulses, and all the energy is deposited in a thin (typically 0.1µm) layer near the surface. This causes vaporization of the surface which ruins the absorber. Instead, a volume absorber that is partially transparent and absorbs over a distance of 50µm-3mm is used. This spreads the heat over a larger volume allowing much higher energies.

Ophir thermopiles can measure from tens of microwatts to Kilowatts. Nevertheless, the Thermal range of operation of the discs is limited. If the difference between the hot and cold junction temperature exceeds tens of degrees, the constant heating/cooling of the junctions can cause premature failure in the junctions. In order to accommodate different power ranges, discs of different thicknesses and sizes are used, thick ones for high powers and thin ones for low powers.

The response time of the discs is dependent on their size and shape: larger diameters and thicker discs are slower than thin small diameter ones. The response time is in general dependent on the mass of material which has to heat up in the thin absorber region of the disc vs. the speed the heat flows out of the same region. The response time is approximately proportional to the aperture, i.e. a 50mm aperture disc is three times as slow as an 18mm aperture disc.

Thermal Surface Absorbing Sensors

A surface absorber typically consists of an optically absorbing refractory material deposited on a heat conducting substrate of copper or aluminum. When a long pulse of several hundred µs or a continuous laser beam falls on such a surface absorber, the light is absorbed in a very thin layer of the surface – typically 0.1 – 1µm thickness (see illustration A). Although the light is absorbed in a thin layer and there converted into heat, the pulse is long enough so that while energy is being deposited into the surface layer, heat is also flowing out into the heat conducting substrate and therefore the surface does not heat up excessively. Ophir standard surface absorbers can stand up to 10 Joules/cm^2 for 2ms pulses and up to 28kW/cm^2 for low power continuous lasers.

Surface Absorbers for High Power Lasers and Long Pulses

The traditional surface absorbers have a much lower damage threshold at > 1000W, where they can damage at 2-3 kW/cm^2. Ophir has developed coatings that improve the damage threshold for high power lasers. These coatings are denser and have higher heat conductivity than previous coatings. This LP2 coating also has a much higher damage threshold for long pulses reaching power damage thresholds of up to 10kW/cm^2 and 300J/cm^2 for 10ms pulses. Surface absorbers are suitable for pulses longer than ~100µs.

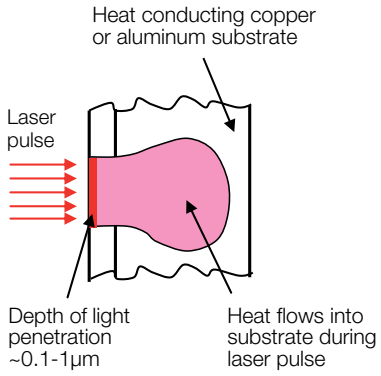
Surface vs. Volume Absorbers

When measuring a laser with short pulses of tens of µs or less, the heat is deposited in a short time and cannot flow during the pulse (see illustration B below). Therefore a surface absorber which absorbs the energy in a thin surface layer is not suitable. All the energy is deposited in a thin layer and that layer is vaporized. In this case, volume absorbers are used. These have traditionally consisted of a neutral density glass thermally bonded to a heat-conducting metallic substrate. The ND glass absorbs the light over a depth of 1-3 mm instead of fractions of a micrometer. Consequently, even with short pulses where there is no heat flow, the light and heat are deposited into a considerable depth of material and therefore the power/energy meter with a volume absorber is able to withstand much higher energy densities – up to 10 Joules/cm^2 (see illustration C). These ND glasses form the basis of the Ophir P type absorbers. In addition to the P absorbers, Ophir has PF and SV absorbers that can stand up to higher average powers and power densities as well as EX absorbers for the UV.

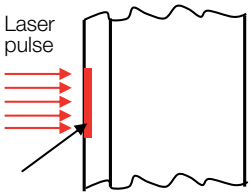
Long laser pulse (>100µs) or continuous

Short laser pulse <10µs

(A) Surface absorber

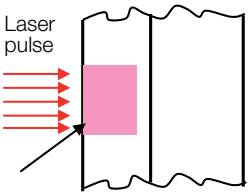


(B) Surface absorber



Depth of light penetration ~0.1-1µm. Light and heat concentrated same thin layer. Heat does not have a chance to flow during the short laser pulse duration.

(C) Volume absorber



Light is absorbed gradually over thick partially transmitting layer. Heat is therefore generated over large volume even during short pulse with no heat flow.

Surface absorbers work best when measuring power or energy for long laser pulses (A). Volume absorbers can measure pulses with much higher energies than surface absorbers (B), (C) can measure.

Calibration

At Ophir's ISO/IEC 17025 accredited laboratory each thermopile sensor is calibrated in a two-stage process against a NIST calibration standard. In the first stage, the responsivity of the sensor is measured and stored and in the second stage, the calibration is tested using several lasers to ensure the accuracy of the first stage. The total measurement uncertainty, expressing the accuracy of the senor under regular operating conditions and the calibration uncertainty, which defines the uncertainty of the final calibration stage (comparing against a NIST master using lasers) are given in the specifications of each sensor.

Introduction to High Power Water Cooled Sensors

Ophir has many years of experience in supplying measurement systems for high power industrial lasers and has the highest power measuring equipment available on the market – up to 120 kilowatts. Ophir meters also have the highest damage threshold available – up to 10kW/cm² at 10kW. Ophir supplies water cooled sensors from 250W up to 120kW and air cooled sensors up to 500W.

All sensors supplied by Ophir have been tested at up to full power and their linearity verified over the entire power range. This is done by deflecting a fraction of the power with a beam splitter into a lower power sensor whose linearity has previously been verified by NIST or PTB. In some cases, it is done by measuring the reading over the power range against a higher power sensor that has been previously measured. The accuracy, linearity and damage specifications have been carefully verified over many years of development and use by the largest existing user base. In addition to power meters for high powers, Ophir also has beam profilers, beam dumps and protective enclosures for industrial lasers.

Calibration Method and Estimated Accuracy for Ophir High Power Sensors

Ophir high-power sensors (models 5000W, 10K-W, IPM-10KW, 15K-W, 16K-W, Comet 10K, 30K-W, and 120K-W) are ordinarily calibrated using moderate-power lasers, not exceeding 6000W (though in certain cases, sensors can be calibrated at up to 15,000W). In other words, we calibrate high-power sensors using laser powers that are in many cases much lower than the power rating of the sensors being calibrated. This raises the question of calibration accuracy. The following brief explanation will clarify how we know that these highest power sensors are indeed accurate to ±5% over their entire measurement range as specified.

Basing high-power calibration accuracy on lower power calibration measurements is valid, subject to the condition that the sensors are linear all across the full power range.

The calibration measurements themselves (using the moderate-power lasers) are all based on NIST-calibrated master references. At the lower powers, the reference sensors are based on Photodiode detectors; Photodiode detectors are well known to be highly linear. At the higher powers, Thermal sensors are used as the reference. A series of detailed tests have confirmed that indeed these sensors are highly linear, all the way up to the highest powers for which they are rated.

Since the Thermal sensors have been shown to be linear over the entire range of powers, it follows that if the calibration is correct at low powers, it will remain correct at high powers as well.

Some additional points:

- An additional issue is zero offset; although the output may be linear at low powers, there may be a zero offset that, due to the relatively low output at low powers, will cause an error in calibration. For example, if calibration is performed at 200W and the output of the sensor is 10µV/W (a typical value) and there is a zero offset of only 1µV, this will cause a calibration error of 10%. Ophir's calibration method includes measuring the difference between the reading with power applied and without power applied, thus eliminating error due to zero offset. This measurement is taken several times to insure accuracy.

- The above measurement method assures that the calibration inaccuracy due to measurement errors is less than 1%, comparable to the expected errors in our lower powered sensors. In order to verify this, all of our high power sensors have been measured by comparison to various calibration standards. These measurements have shown Ophir sensors to be well within the claimed limits of linearity.

- The Comet 10K series measures the heat rise of the absorbing puck when irradiated by the laser for 10s. In order to calibrate the Comet 10K, we simply irradiate with a lower power laser for longer e.g. 150W for 60s. Thus the heating effect is similar to that of a higher power laser. Tests of the Comet calibrated by this method vs. NIST traceable high power sensors have shown that it is accurate and reproducible.

For more information on calibration please consult our website at **www.ophiropt.com/calibration-procedure/tutorial**

Note regarding water cooling:

Most Ophir high power sensors are water cooled. Customers often have questions about our water cooled sensors such as the correct flow rate and pressure under various conditions and the quality of the water required. For further information on water cooled sensors, please see our tutorial on the subject at **http://www.ophiropt.com/laser--measurement/knowledge-center/article/10000**

Photodiode Sensors

A Photodiode sensor is a semiconductor device that produces a current proportional to light intensity and has a high degree of linearity over a large range of light power levels - from fractions of a nW to about 2mW. Above that light level, corresponding to a current of about 1mA, the electron density in the Photodiode becomes too great and its efficiency is reduced causing saturation and a lower reading. Most Ophir PD sensors have a built-in filter that reduces the light level on the detector and allows measurement up to 30mW without saturation. Most sensors have an additional removable filter allowing measurement to 300mW or 3W depending on the model.

Principle of Operation

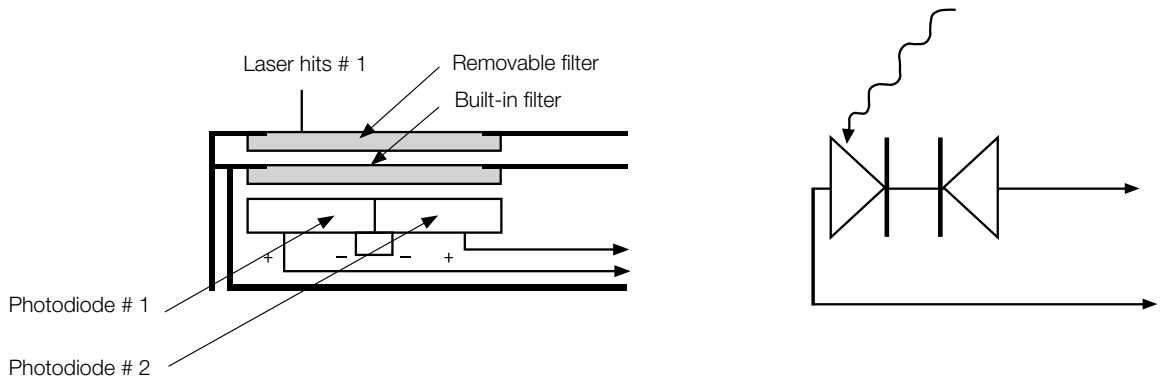
When a photon source, such as a laser, is directed at a Photodiode detector, a current proportional to the light intensity and dependent on the wavelength is created. Since many low power lasers have powers on the order of 5 to 30mW, and most Photodiode detectors saturate at about 2mW, the PD300 sensor has been constructed with a built-in filter so the basic sensor can measure up to 30mW without saturation. With the removable extra filter, the PD300 sensors series can measure up to 300mW or 3W depending on the model. The Ophir power meter unit amplifies this signal and indicates the power level received by the sensor. Due to the superior circuitry of the Ophir power meters, the noise level is very low and the PD300 series sensors with Ophir power meter have a large dynamic range from picowatts to watts. The PD300 is shown schematically below. The PD300 and PD300-1W have the exclusive patented dual detectors connected back to back which eliminate any signal illuminating both detectors equally (background light).

Calibration and Accuracy

The sensitivity of various photodiode sensors varies from one sensor to another as well as with wavelength. At Ophir's ISO/IEC 17025 accredited laboratory each photodiode sensor is calibrated in a two-stage process against a NIST photodiode calibration standard. In the first stage the photodiode is calibrated using a monochromator over its entire spectral range, and in the second stage the calibration is tested using several lasers to ensure the accuracy of the first stage. As an example, total measurement uncertainty of ±2% (expressing the accuracy of the senor under regular operating conditions) is achieved for PD300-UV at 420-980nm. The Calibration Uncertainty, which defines the uncertainty of the final calibration stage (comparing against a NIST master using lasers) is given in the following table:

	UV & VIS Photodiode Sensors	IR Photodiode Sensors	Radiometric Sensors (PD300RM)
Calibration Uncertainty	200 to 300nm 3.2% 300 to 430nm 1.65% 430 to 1000nm 1.1% 1035 to 1065nm 4.3%	700 to 1430nm 2.4% 1430 to 1600nm 2.6%	250 to 300nm 4.5% 300 to 400nm 3.6% 400 to 1000nm 3.4%

Photodiode detectors are linear by nature, and as long as they are not operated close to saturation, measurement errors due to non-linearity can be ignored.
For more information on calibration accuracy please see our website at:
www.ophiropt.com/calibration-procedure/tutorial
All Ophir power and energy sensors come with a mounting stand.



1.1.1 Photodiode Power Sensors

1.1.1.1 Standard Photodiode Sensors

50pW to 3W

Features

- Very large dynamic range
- Swivel mount for hard to measure places
- Comes with filter in / filter out options
- Patented automatic background subtraction
- Fiber optic adapters available

PD300 with filter off

PD300 with filter installed

PD300-TP Mounted on stand

Model	PD300			PD300-1W			PD300-3W			PD300-TP		
Use	**General**			**Powers to 1W**			**Powers to 3W**			**Thin profile for tight fit**

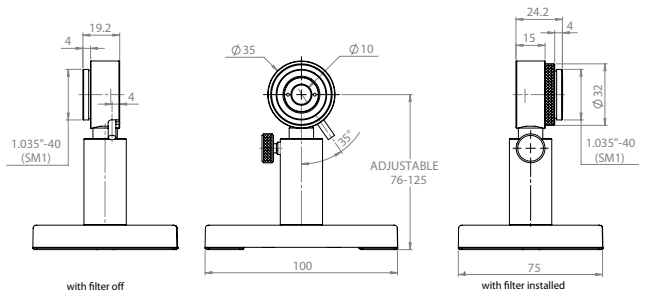
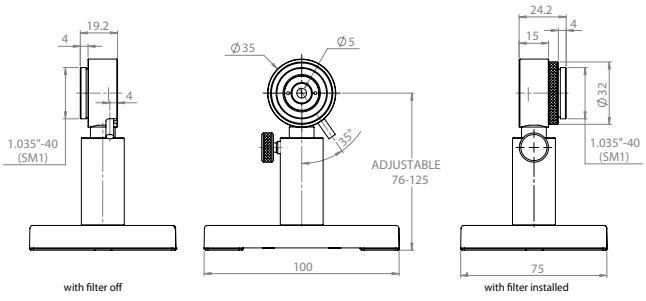
PD300R / PD300R-3W / PD300R-UV



PD300R-IR



3µW to 1W

Features

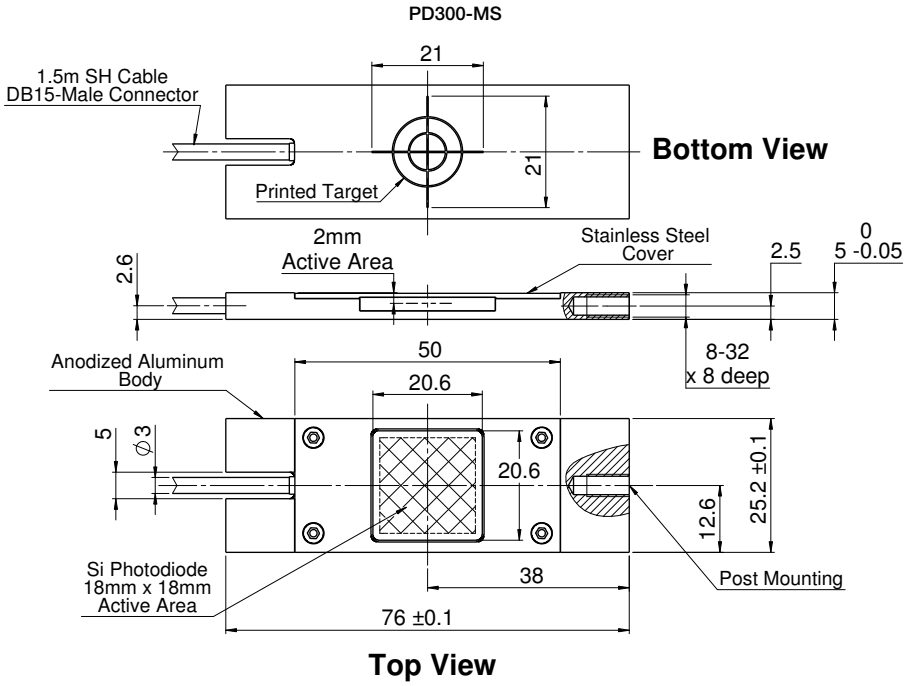
- PD300-MS for measurement of optical intensity after the microscope objective.
- Low angular dependence for high N.A. objectives.
- Can be used with air, water or oil immersion objectives.

PD300-MS

Model	**PD300-MS**	
Use	**Measurement of light intensity at microscope slide plane**	
Detector Type	Silicon with filter	
Aperture	18x18mm	
Spectral Range nm	350-1100	
Power Range	3µW to 1W (see wavelength dependency below)	
Power Scales	100µW to 1W and dBm	
Resolution µW	0.1	
Calibration Uncertainty nm	±1.1% 430-1000 [b]	
Maximum Power vs. Wavelength	Wavelength, nm	Power Range
	350 - 650	6µW to 1W
	650 - 800	3µW to 800mW
	800 - 1000	3µW to 600mW
	>1000	6µW to 700mW
Accuracy (including errors due to temp. variations)		
% error vs Wavelength nm [a]	±7 350 - 400	
	±5 400 - 1100	
Linearity	1%	
Additional Error with Converging Beam	3% for N.A. 0.9	
Damage Threshold W/cm²	20	
Noise Level	300nW at 350nm, 150nW at 960nm	
Response Time with Meter s	0.2	
Compliance	CE, UKCA, China RoHS	
Version		
Part Number	**7Z02482**	

Note: (a) For beam centered on sensor ±2 mm
(b) For calibration uncertainty of wavelengths outside of this range see table on page 24

PD300-MS



Features

- PD300-BB for broadband light sources - radiometry (PD300-BB-50mW option up to 50mW)
- PD300-CIE for human visual perception Lux measurements
- BC20 for measuring scanned beams such as bar code light sources

PD300-BB / PD300-BB-50mW

PD300-CIE

BC20

Model	PD300-BB	PD300-BB-50mW		PD300-CIE	BC20
Use	**Radiometry-broad spectrum**	**Same as PD300-BB with removable attenuator for use to 50mW**		**Eye adjusted measurement in Lux**	**Scanned beams e.g. bar code with continuous wavelength curve**
Detector Type	Silicon with special filter	Silicon with special filter		Silicon with special filter	Silicon with peak and hold circuit
Aperture	10x10mm	10x10mm		Active area 2.4 x 2.8mm	10x10mm
Spectral Range nm	430 - 1000 (see graph)	430 - 1000 (see graph)		400 - 700 (see graph)	400 - 1100 (see graph) [b]

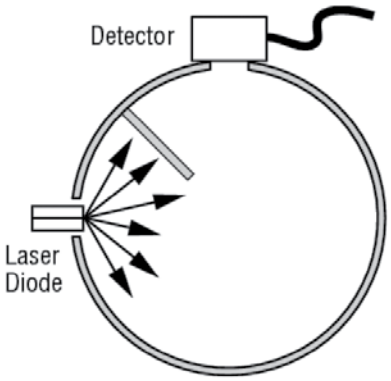
Introduction

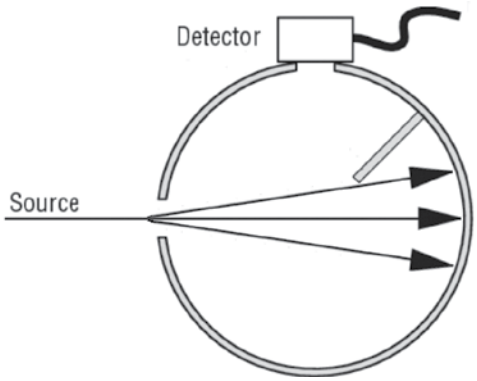
Ophir Integrating Sphere sensors are used for measuring divergent light sources such as LEDs, VCSELs and other lasers. Integrating sphere detectors are also used for measuring large beams that do not fit in a PD300 photodiode sensor. The light is introduced to the sphere through the input port, it is reflected many times by the highly reflecting diffuse coating on the inner wall of the sphere until it uniformly illuminates the inner surface of the sphere. A detector samples a small fraction of this light and thus can be used to measure the total power input into the sphere.
Ophir integrating spheres have a highly reflecting diffuse white coating for high efficiency and readings that are independent of beam size, position and divergence.

Diverging and Collimated Beams Measurement Considerations

Ophir Integrating Spheres can be used either with diverging or collimated beams as shown below. In order for an integrating sphere sensor to operate properly, the beam should never directly hit the detector and the detector should only see rays reflected from the wall. The diagram below shows how the sphere can be used with either a collimated or diverging beams. The unused port is closed with a reflective plug.



This integrating sphere configuration is ideal for a diverging beam



This integrating sphere configuration is ideal for a collimated beam

Ophir offers small spheres with 1” to 1.6” diameter and 5.3” spheres. Photodiode detectors provide calibrated power measurement of up to 30W between 200nm and 1800nm. Many accessories are available for Ophir Integrating Spheres such as fiber adapters and fast photodiode detectors for pulse shape monitoring. In order to maintain accuracy and guarantee performance, annual integrating sphere detector calibration is recommended.
Note that the system calibration is no longer valid if any component is changed from the original calibrated configuration.

Related Product

Ophir also offers an integrating sphere sensor that has an FPD pulse characterization detector built in.

See our **IS1.5-VIS-FPD-800, 1.5” High Speed Response, Multi-functional Integrating Sphere** on page 35.

IS1.5-VIS-FPD-800
(see p. 35)

1.1.1.6.1 Small Dimensions 1”-1.6”

500nW to 3W

Features

- Integrating sphere for divergent beams (LEDs, VCSELs, etc.)
- Up to Ø12mm aperture
- Fiber or free space input

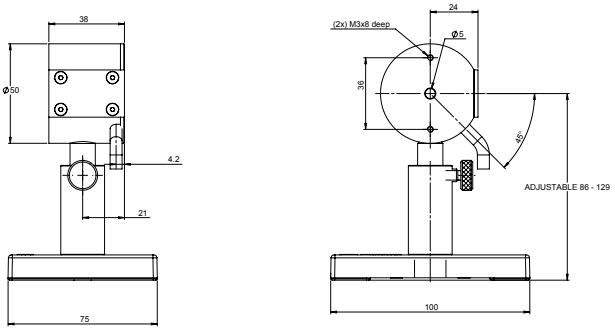
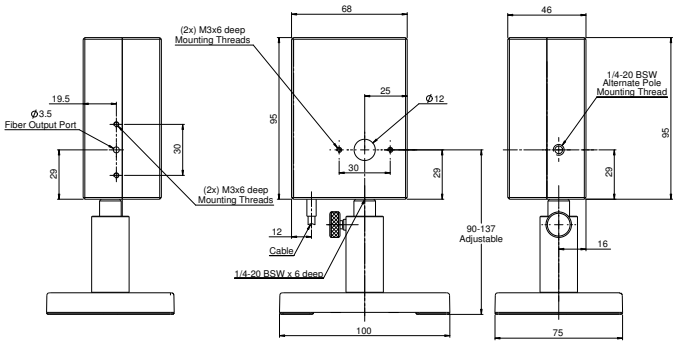
Version		V1	
Part Number	**7Z02484**	**7Z02404**	**7Z02403**

Notes: (a) One fiber output port available with output = 2E-4 of input power/mm² of fiber area
(b) For calibration uncertainty of wavelengths outside of this range see table on page 24

IS-1-2W



3A-IS / 3A-IS-IRG



1.1.1.6.2 VIS 1.5” High Speed Response, Multi-functional Integrating Sphere

400nW – 4W

IS1.5-VIS-FPD-800

Features

- Fast photodiode for pulse shape characterization of VCSELs
- Built in SMA fiber adapter for connection to a spectrometer
- Large, 20mm input port enabling long working distance
- Accepts beams with divergence angles up to ±60°
- Small integrating sphere with short time constant

Model	**IS1.5-VIS-FPD-800**
Use	**Multi-functional Integrating Sphere**

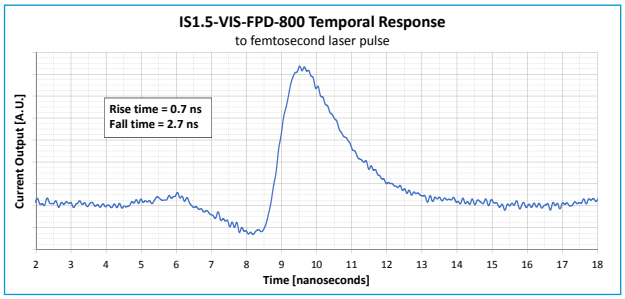
Specifications	
Input Port Aperture mm	Ø20
Maximum Beam Divergence [a], [b] deg°	±60
Damage Threshold on Integrating Sphere Surface W/cm²	200 (average power)
Integrating Sphere Time Constant nsec	0.7 typ.
Fiber Optic Port	SMA connector, maximum NA 0.44
Outputs	Smart Head for power measurement, BNC (50Ω) for temporal pulse shape detection SMA for optical fiber
Cooling	Convection
Operating Temperature Range °C	+15 to +40
Storage Temperature Range °C	-20 to +60
Humidity	The product must not be exposed to high humidity. Range 20% ~ 70% RH non-condensing

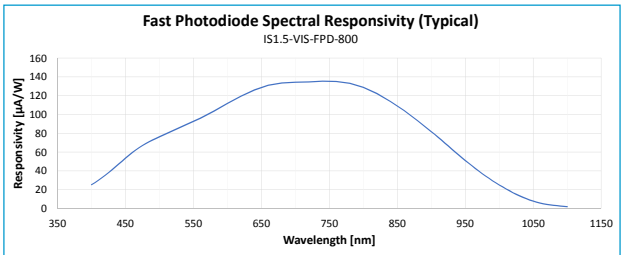
Detector 1	
Type	Si photodiode, calibrated
Function	Average power
Spectral Range µm	0.4 – 1.1
Power Range	400nW – 4W
Power Scales	4W to 40µW
Power Accuracy [b]	±3% 430nm – 1000nm, ±4% < 430nm, ±7% >1000nm
Linearity with Power ±%	2
Power Noise Level nW	20 typ.
Saturation Pulse Energy mJ	2 typ.
Calibration Uncertainty nm	±1.1% 430-1000 [c]
Output	Smart Head, D15

Detector 2	
Type	Fast Si photodiode
Function	Temporal pulse shape detection
Spectral Range µm	0.4 – 1.1
Rise Time nsec	0.8
Fall Time nsec	2.8
Bias Voltage Input VDC	12
Peak CW Responsivity @ 740nm µA/W [d]	135 typ.
CW Responsivity @ 940nm µA/W [d]	55 typ.
Saturation Current Output mA	2.7 (for 10 ns pulse)
Dark Current nA	0.3 typ., 1 max
Noise Current fA/√Hz	18 typ.
Output	Analog current, BNC

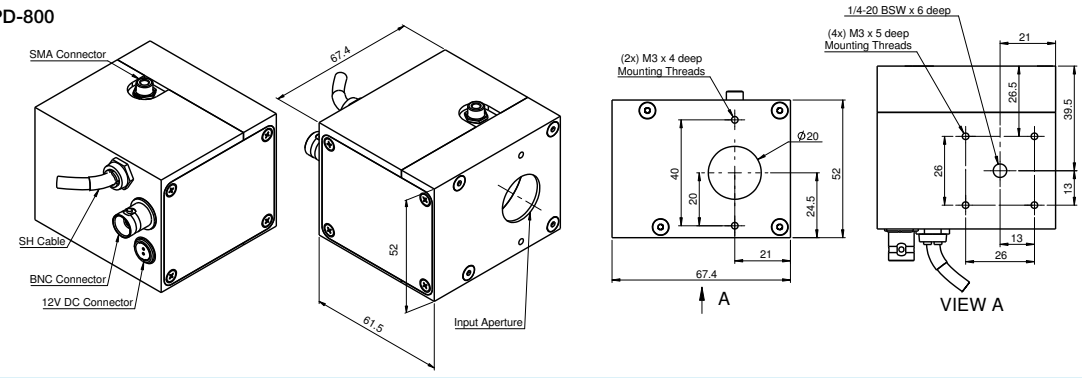
General	
Weight g	530
Compliance	CE, UKCA, China RoHS
Part number	**7Z02491**

Notes:
(a) For central 2 mm diameter of entrance aperture
(b) Power Accuracy and Sensitivity to Beam Size and Angle specifications apply to beam divergence up to ±45° and central 5.6 mm diameter of entrance aperture, for larger divergence and/or area of entrance aperture these specifications increase by 2%
(c) For calibration uncertainty of wavelengths outside of this range see table on page 24
(d) Responsivity data provided with sensor





IS1.5-VIS-FPD-800



1.1.1.6.3 NIR 1.5” High Speed Response, Multi-functional Integrating Sphere

600nW – 3W

IS1.5-IRG-FPD-800

Features

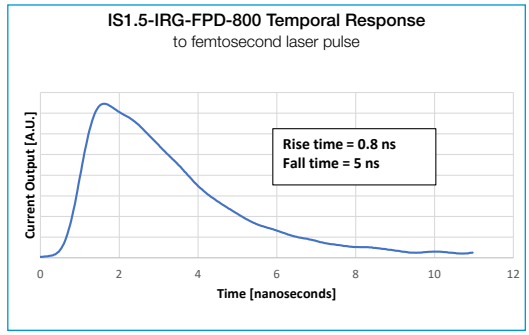
- Fast photodiode for pulse shape characterization of VCSELs
- Built in SMA fiber adapter for connection to a spectrometer
- Large, 20mm input port enabling long working distance
- Accepts beams with divergence angles up to ±50°
- Small integrating sphere with short time constant

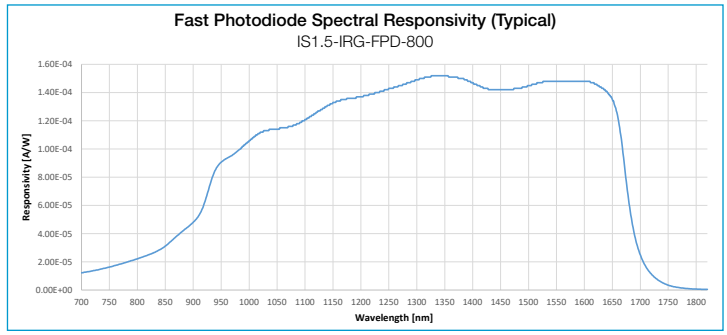
Model	**IS1.5-IRG-FPD-800**
Use	**Multi-functional Integrating Sphere**

Specifications	
Input Port Aperture mm	Ø20
Maximum Beam Divergence deg°	±50
Damage Threshold on Integrating Sphere Surface W/cm²	200 (average power)
Integrating Sphere Time Constant nsec	<0.7
Fiber Optic Port	SMA connector, maximum NA 0.44
Outputs	Smart Head for power measurement, BNC (50Ω) for temporal pulse shape detection SMA for optical fiber
Cooling	Convection
Operating Temperature Range °C	+15 to +40
Storage Temperature Range °C	-20 to +60
Humidity	The product must not be exposed to high humidity. Range 20% ~ 70% RH non-condensing
Sensitivity to Beam Size and Angle	±2%
Detector 1	
Type	InGaAs photodiode, calibrated
Function	Average power
Spectral Range µm	0.94 – 1.64
Power Range	600nW – 3W
Pulse Width	Not limited
Pulse Repetition Rate [a]	Not limited
Power Scales	3W to 3µW
Power Accuracy	±3% 940nm – 1100nm, ±4% 1100nm - 1640nm
Linearity with Power ±%	2
Power Noise Level nW	30
Output	Smart Head, D15

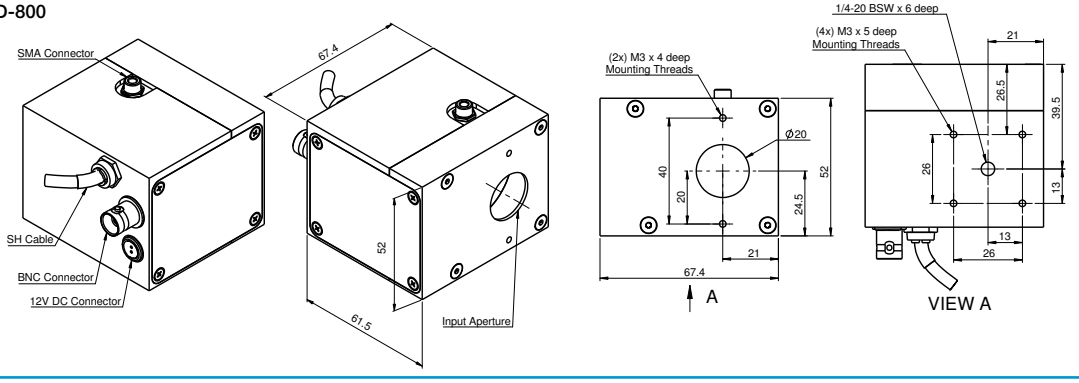
Detector 2	
Type	Fast InGaAs photodiode
Function	Temporal pulse shape detection
Spectral Range µm	0.94 – 1.64
Rise Time (10% to 90%) nsec	0.8
Fall Time (90% to 10%) nsec	5
Bias Voltage Input V	9
Typical CW Responsivity mA/W [b]	0.14 @ 1100 - 1500nm
Dark Current nA	1
Noise Current fA/√Hz	15.5
Output	Analog current
General	
Weight g	530
Compliance	CE, UKCA, China RoHS
Part number	**7Z02493**

Notes: (a) Below 200Hz use low frequency mode in meter
(b) Responsivity data provided with sensor





IS1.5-IRG-FPD-800



1.1.1.6.4 Large Dimensions 5.3”

Features

- 4 port Integrating spheres for collimated and divergent beams (LEDs, VCSELs, etc.)
- Up to 170° acceptance angle
- Ø63.5mm (2.5”) aperture
- Fiber or free space input
- Can be ordered with or without detectors

Model	**IS6**		
Use	**For use with customer detector or as light source**		
Detector	None – see below for detector versions		
Spectral Range µm	0.2 – 2.2		
Source Geometry [a] (see introduction)	**Divergent**		**Collimated**
Input Port Aperture mm	Ø63.5 [b]		Ø25
Maximum Beam Divergence deg°	±60 [d]		±15
Sensitivity to Beam Divergence ±%	3 [c]		1
Power Range	Depends on detector – see below		
Damage Threshold kW/cm²	1 on integrating sphere surface		
Cooling	Convection		
Weight kg	1.4		
Type	**P/N**	**Version**	**Compliance**
IS6-D For divergent beams (input from 2.5” side)	7Z02487	V1	RoHS, China RoHS
IS6-C For collimated beams (input from 1” side)	7Z02474		RoHS, China RoHS
Supplied Port Accessories (see page 39)	**IS6-D:** 2.5” to 1” reducer w/cover + 1” port plug + 2 ea.1” port covers **IS6-C:** 2.5” port plug + 3 ea. 1” port covers		

Notes: (a) In each configuration, the opposing port is closed with a port plug. See diagram in introduction page 33.
(b) The sphere is supplied with the 2.5” to 1” reducer.
(c) For beams up to 30deg divergence, variation with beam size is ±1%.
(d) For central 5mm of aperture, for 10mm aperture maximum beam divergence is ±56°.

IS6 with Detectors for Collimated Beams - calibrated - VIS, UV & IR types

-Recommended for beam divergence <15°
-Comes with calibrated wavelength curve

Related Product

For an integrating sphere sensor that has an FPD pulse characterization detector built in, see our **IS1.5-VIS-FPD-800, 1.5" High Speed Response, Multi-functional Integrating Sphere** on page 35.

IS1.5-VIS-FPD-800
(see p. 35)

FPD Detector Mounted on IS6-D-IR-170

Ophir FPD fast photodiode detectors (see page 113) interface with all IS6 integrating spheres, facilitating temporal characterization of laser pulses in parallel with other measurements.

1.1.1.6.5 Accessories for IS6

All accessories attach to 1” ports unless otherwise noted.

Accessory	Description	Part number
Port plugs	Port plugs close ports with white sphere material, eliminating the port from the sphere geometry	
IS-1” Port plug	White reflectance material, PTFE, Ø25.4mm plug	7Z08280A
IS-2.5” Port plug	White reflectance material, PTFE, Ø63.5mm plug, for 2.5” port	7Z08283A
Port Covers	Port Covers close ports with a black matte surface. They prevent extraneous light from entering the sphere without changing the sphere configuration. These covers can also be used as blanks for making specialized port adapters	
IS-1” Port cover	Matte black coated Ø25.4mm cover	7Z08282A
IS-2.5” Port cover	Matte black coated Ø63.5mm cover, for 2.5” port	7Z08281A
Adapters and Reducers	The adapters are black coated and the reducers white coated	
1” SMA fiber adapter	SMA fiber input/output	7Z08285
1” FC fiber adapter	FC fiber input/output	7Z08286
FPD (except FPS-1) to IS6 adapter	For mounting FPD sensor series to North Pole port of IS6 series	7Z08350
1” to SM1 adapter	Female SM1 thread , used for attaching FPS-1 detector to IS6	7Z08289
1” to C-mount adapter	Female C-mount thread	7Z08290
1” to C-mount port reducer	Male C-mount thread with 11mm aperture	7Z08288
2.5” to 1” port reducer	Convert the 2.5” port into a 1” port PTFE	7Z08305A
Set of aperture masks	Ø5, Ø7, Ø10mm apertures, for use with 2.5” to 1” port reducer P/N 7Z08305A [a] [c]	7Z08307
Flange attachment	Dovetail flange for use with 2.5” to 1” port reducer P/N 7Z08305A [b] [c]	7Z08306

Notes: (a) This accessory is held on to port reducer 7Z08305A magnetically.
(b) This accessory is mounted to port reducer 7Z08305A with the included screws.
(c) IS6 P/N’s 7Z02471, 7Z02473, 7Z02475, 7Z02477 incorporate an earlier version of the 2.5” to 1” port reducer that is not compatible with this accessory. That port reducer can be replaced with the current version, P/N 7Z08305A, in order to use the new accessories.

Introduction

UV, VIS and IR LEDs are replacing traditional light sources and thus enabling new applications. Ophir offers a number of choices for LED measurement. There are a number of sources for measuring the power of divergent LED beams as presented in section 1.1.1.6. There are also radiometer sensors for measuring the irradiance of large area illumination in units of Watts/cm^2 as presented in section 1.1.1.7.2

1.1.1.7.1 LED Power Sensors

20pW to 3W

Features

- 20pW to 3W
- 200nm to 1100nm
- Photodiode detectors – spectrally calibrated for LEDs and lasers
- Thermal sensors – power measurement is insensitive to wavelength
- Fiber or free space input
- Compatible with all Ophir meters, acquisition devices and StarLab PC software

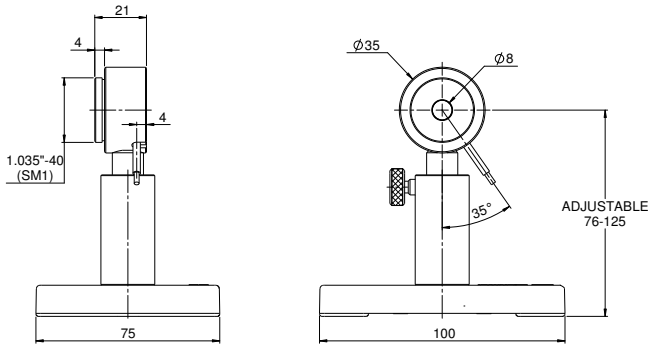
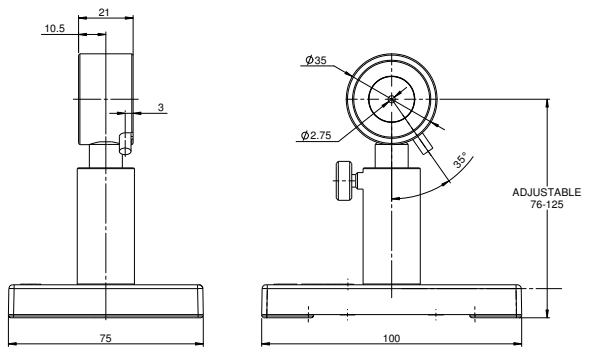
Part number	**7Z02479**	**7Z02480**	**7Z02492**

Notes:
(a) Accuracy given for lasers. Accuracy for LEDs depends on peak wavelength and bandwidth. Contact Ophir for more details.
(b) Applicable to lasers and LEDs, includes deviation from flatness.
(c) Accuracy includes uncertainty of NIST calibrated reference.
(d) Do not exceed 30 seconds of continuous exposure at > 5W/cm².
(e) For calibration uncertainty of wavelengths outside of this range see table on page 24.
(f) Up to 70 degrees.

PD300RM-UV / PD300RM-8W

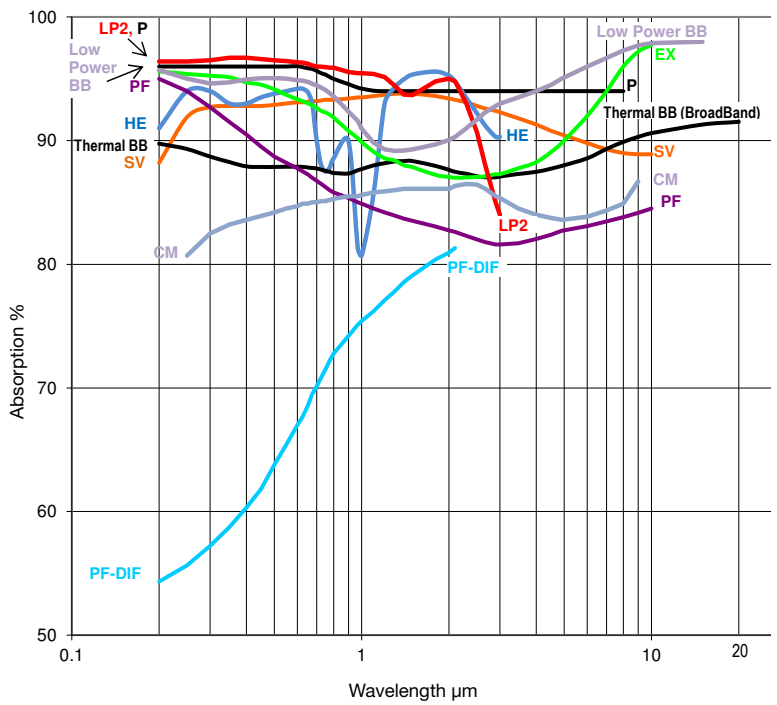


PD300RM-UVA

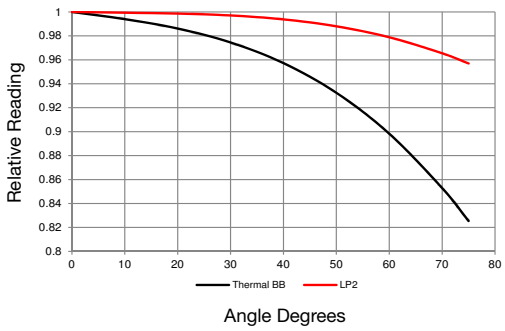


Absorption, Angle Dependence and Damage Graphs for Thermal Sensors

Absorption vs. Wavelength

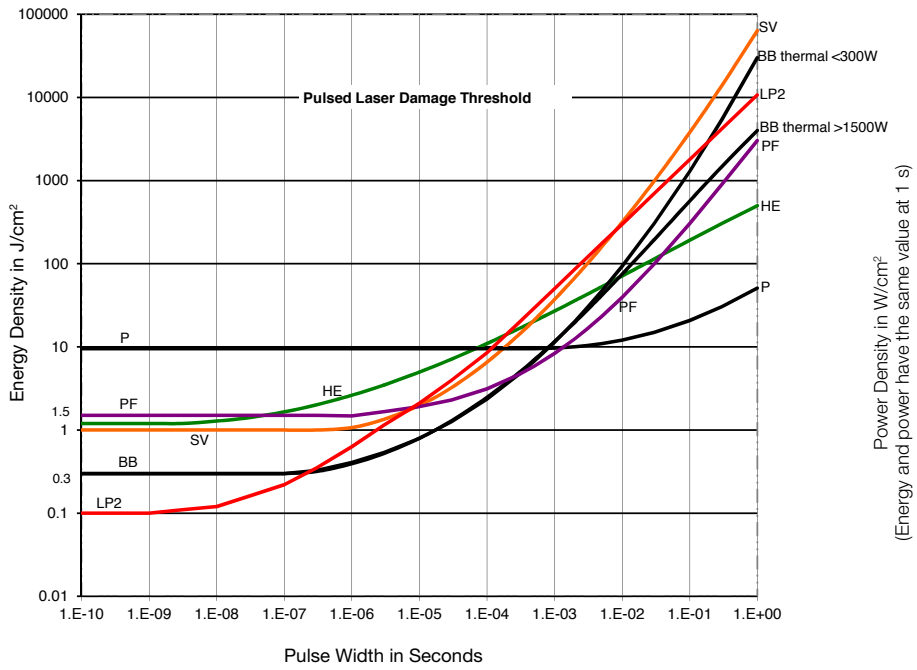


Response vs. Incidence Angle



Damage Threshold vs. Pulse Width

Note: The CW power damage threshold in W/cm² is found on the right hand side of the table at the 1s pulse width value



1.1.2.1 Low Noise Lock In Power Sensors

300fW to 100mW

Features

- Chopper and lock in amplifier for lowest noise and drift
- Wavelength range from UV to deep IR including Terahertz
- RM9 pyro is not sensitive to background radiation

The RM9 series Radiometers use a pyroelectric or photodiode sensor in conjunction with chopped CW or quasi CW radiation, using a digitally synthesized lock-in amplifier to reduce external noise to a minimum. The signal is passed through the 18Hz chopper and the chopped signal is detected by the sensor. All signals not at this 18Hz frequency are suppressed. The output of the sensor is displayed on a standard Ophir meter or PC interface. The chopper may be placed at any convenient location but preferably close to the signal source so as to eliminate interference from all unchopped radiation. The chopper is to be oriented with the indicated side toward the sensor.

Specifications

Model	RM9	RM9-THz	RM9-PD
Use	**Low level signals**	**Low level Terahertz**	**Very low level signals**
Detector Type	Pyroelectric	Pyro with THz absorber	Si Photodiode
Spectral Range	0.15 - 12µm [a]	0.1 – 30THz [g]	0.2 - 1.1µm [b]
Aperture mm	Ø8mm	Ø8mm	Ø10mm
Surface Reflectivity % approx.	50	40 - 70	50
Power Range [c]	100nW – 100mW	100nW – 100mW	300fW – 300nW
Power Scales	100mW to 3µW	100mW to 3µW	300nW to 3pW
Power Noise Level [d]	~30nW	~20nW	30fW
Minimum Frequency for Pulsed Sources	200Hz	200Hz	200Hz
Thermal Drift (20min) [e]	~30nW	~15nW	N.A.
Power Accuracy	±5% [a]	±10% [g]	±5% [b]
Damage Threshold W/cm^2	5	5	5
Response Time with Meter (0-95%) s	3.5s	3.5s	3.6s
Linearity with Power	±2%	±2%	±2.5%
Connections:			
1. 1.5 meter cable hard wired to interface module.			
2. BNC connector on module for connection to chopper (2 meter BNC to BNC cable included). Perform zeroing with BNC cable removed.			
3. 0.5 meter cable from module terminated in DB15 connector.			
Cooling	convection	convection	convection
Weight kg	0.37	0.37	0.37
Compliance	CE, UKCA, China RoHS	CE, UKCA, China RoHS	CE, UKCA, China RoHS
Version			
Part Number for RM9 Series with RMC1 Chopper [f]	**7Y70669**	**7Y70678**	**7Y70672**
Part Number for RM9 Series Sensors	**7Z02952**	**7Z02956**	**7Z02953**

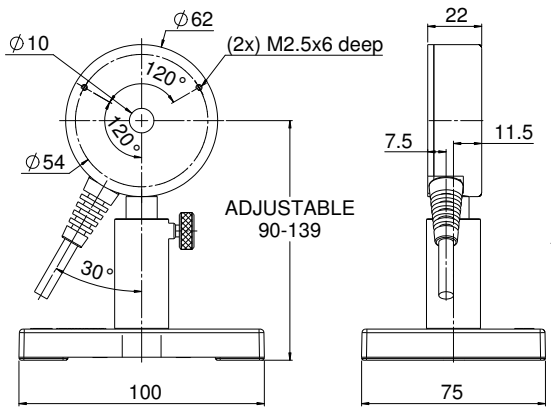
Notes: (a) At calibrated wavelengths 500 – 1100nm. At other wavelengths, there is an additional error as follows: <500nm add ±8%, 1100 – 3000nm add ±5%, 10.6µm add ±15%
Notes: (b) At calibrated wavelengths 200 – 1100nm. For <700nm add ±2% additional error
Notes: (c) For LaserStar, Pulsar, USBI, Quasar and Nova/Orion, upper limit is 1mW for RM9/RM9-THz and 90nW for RM9-PD. For these models, accuracy may also be less than values given above
Notes: (d) Averaged over 10s
Notes: (e) In a typical laboratory environment
Notes: (f) The RMC1 or another chopper unit that can be set to 18Hz is required for operation of the RM9 series sensors
Notes: (g) The sensor is calibrated for 0.7, 1.5, 2.5, 4 and 10THz. Response at other frequencies can be interpolated from the graph on page 45. Stated accuracy is for frequencies or interpolated frequencies in the range 0.7 – 5THz. For 5 – 10THz, the calibration uncertainty is 15% and for frequencies outside that range, approximate readings can be calculated from the graph but no specified accuracy is given.

* For drawings and graphs please see page 45

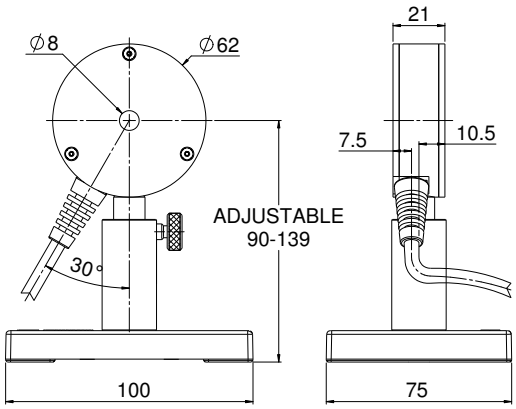
Model	RMC1 Chopper
Use	**Chopper for RM9 Series**
Aperture	Ø22mm
Chopping Frequency [a]	18Hz
Power Consumption	85mA
Connections:	
1. BNC to interface module	
2. 12V wall cube power supply (included)	
3. Mini USB connector (factory use only)	

Notes: (a) not adjustable by user.

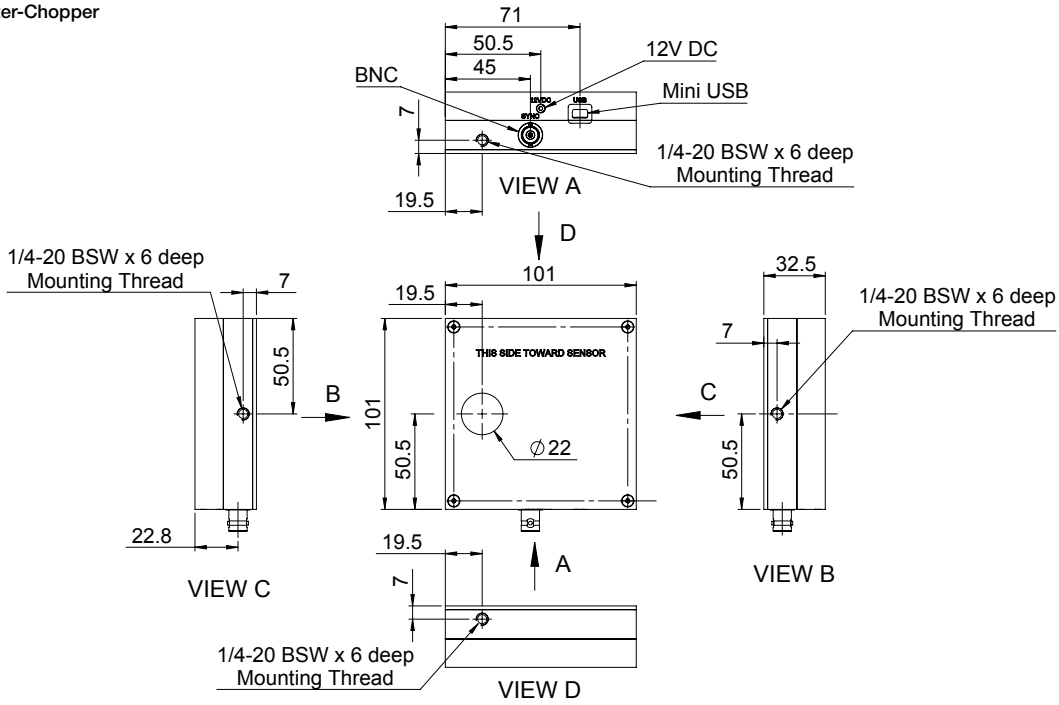
RM9-PD Sensor



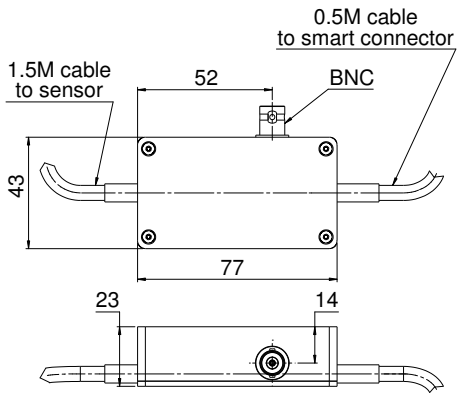
RM9 / RM9-THz Sensors

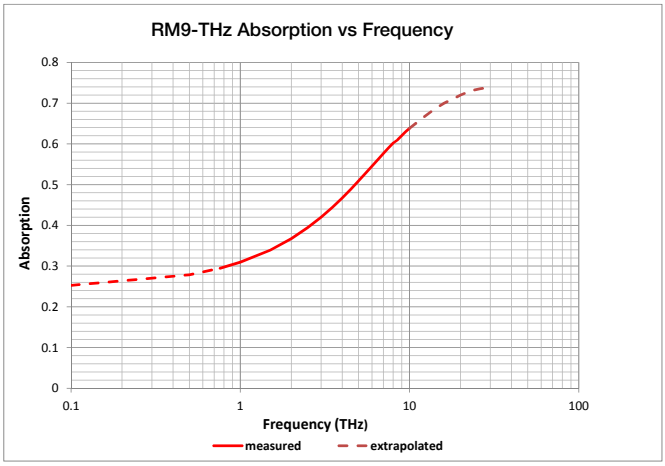


Radiometer-Chopper



Interface Module





10µW to 3W

Features

- Very low noise and drift for measurement of very low powers and energies
- PF absorber has high damage threshold for CW and pulses
- Up to 3W

2A-BB-9

3A / 3A-P / 3A-PF-12

Version			V1	
Part number: Standard Sensor	**7Z02767**	**7Z02621**	**7Z02622**	**7Z02720**
BeamTrack Sensor: Beam Position & Size (p. 51)		**7Z07934**	**7Z07935**	

Note: (a) Depending on room airflow and temperature variations. Lowest measurable powers are achieved by thermally quiet room conditions, using removable snout (for 3A, 3A-P, 3A-PF-12 sensors), averaging and offset subtraction.

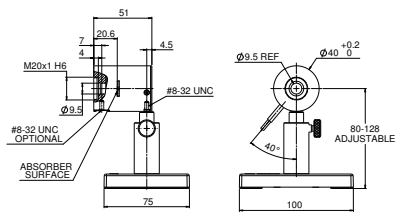
Note: (b) **For P and PF** types and shorter wavelengths derate maximum energy density as follows:

Wavelength	P type Derate to value	PF type Derate to value
1064nm	Not derated	Not derated
532nm	Not derated	Not derated
355nm	40% of stated value	70% of stated value
266nm	5% of stated value	15% of stated value
193nm	10% of stated value	5% of stated value

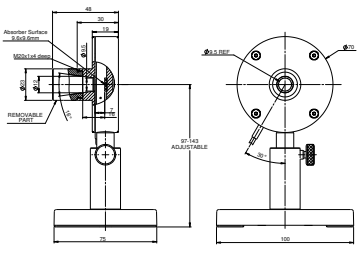
Note: (c) Calibrated from 193nm to 2.2µm and at 10.6µm. There is an additional error of ±1% from 450nm to 650nm.

Note: (d) The 3A and 2A-BB-9 sensors have a relatively large spectral variation in absorption and has a calibrated spectral curve at all wavelengths in its spectral range to the above specified accuracy. Nova, Orion and LaserStar meters do not support this feature and when used with those meters, the accuracy will be ±3% as above for 532nm, 905nm, 1064nm and 10.6µm but there will be an additional error of up to 3% at other wavelengths in the spectral range 190 – 3000nm.

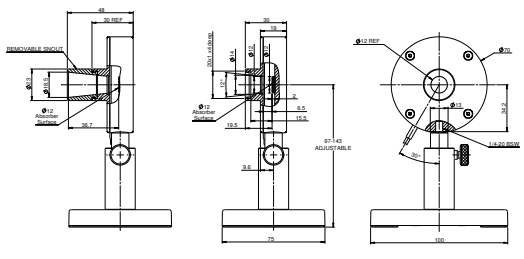
2A-BB-9



3A



3A-P / 3A-PF-12



8µW to 3W

Features

- Very low noise and drift to measure very low powers and energies
- Broadband and P absorbers for CW and short pulses
- Up to 3W
- Version for Terahertz

3A-P-THz

3A-FS

3A-P-FS-12

Model	3A-P-THz	3A-FS	3A-P-FS-12
Use	**Calibrated for Terahertz radiation**	**With removable window**	**For divergent beams, window blocks infrared**
Absorber Type	P type	Broadband + F.S. window	P type + F.S. window
Spectral Range µm	0.1THz - 30THz [c]	0.19 - 20 [b]	0.22 - 2.1
Aperture mm	Ø12mm	Ø9.5mm	Ø12mm
Maximum Beam Divergence	NA	NA	±40 degrees
Power Mode			
Power Range [f]	15µW - 3W	8µW - 3W	15µW - 3W
Power Scales	3W to 300µW	3W to 300µW	3W to 300µW
Power Noise Level	4µW [d]	2µW	6µW
Thermal Drift (30min) [a]	5 - 30µW	2 - 10µW	20 - 40µW
Maximum Average Power Density kW/cm²	0.05	1	0.05
Response Time with Meter (0-95%) typ. s	2.5	1.8	2.5
Calibration Uncertainty ±%	1.9	1.9	1.9

Version			
Part number	**7Z02742**	**7Z02628**	**7Z02687**

Note: (a) Depending on room airflow and temperature variations

Note: (b) Remove window for measurement beyond 2.2µm

Note: (c) 2 sigma standard lab traceable calibration for 0.6THz – 10THz. For 0.3 - 0.5THz add 4% to error. Outside this region the sensor will measure but is not calibrated.

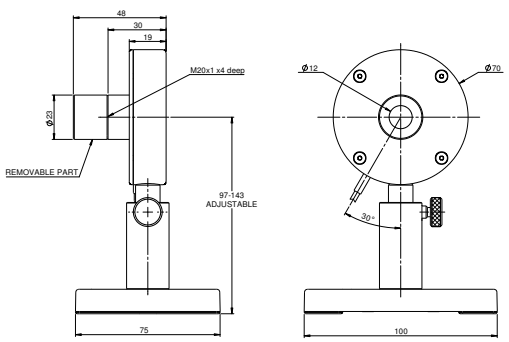
Note: (d) Back reflections from meter can sometimes cause interference effects with source. Unit should be tilted ~10° in this case

Note: (e) For P type and shorter wavelengths derate maximum energy density as follows:

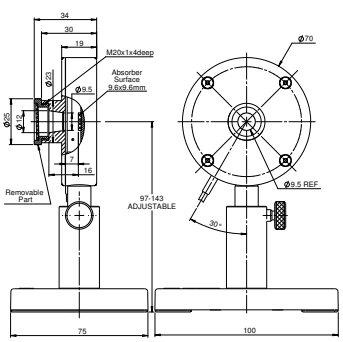
Wavelength	Derate to value
1064nm	Not derated
532nm	Not derated
355nm	40% of stated value
266nm	5% of stated value
193nm	10% of stated value

Note: (f) Lowest measurable powers are achieved by thermally quiet room conditions, using removable snout, averaging and offset subtraction

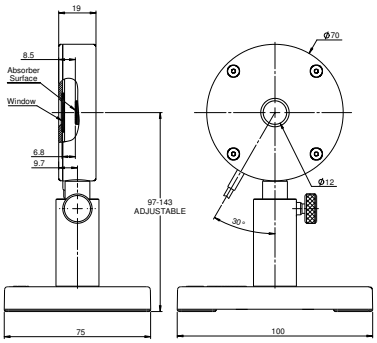
3A-P-THz



3A-FS



3A-P-FS-12



2mW to 12W

Features

- Very low noise and drift to measure very low powers and energies
- Broadband and P absorbers for CW and short pulses
- Up to 12W
- Spectrally flat

12A / 12A-P

Notes: (a) The BeamTrack features are supported by Centauri, StarBright, StarLite, Nova II and Vega meters, Juno, Juno+, Juno-RS and EA-1 interfaces and StarLab application. Position and Size measurements work only in Power mode (but not in single shot Energy mode).

Notes: (b) Depending on room airflow and temperature variations.

Notes: (c) For position within inner 30% of aperture. Position measuring center corresponds to geometrical center within <1mm. Position center can be software reset to geometric center or other desired position with Centauri, StarBright or StarLab.

Notes: (d) Assumes laser beam with circular Gaussian (TEM_{00}) distribution. For other modes, size measurement is relative.

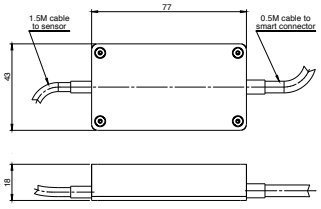
Notes: (e) Accuracy spec will be maintained for beams ≥1.8 mm not deviating from center by more than 15% of beam diameter.

Notes: (f) For P type and shorter wavelengths derate maximum energy density as follows:

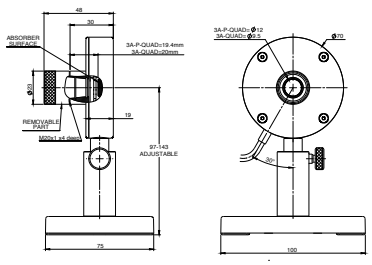
Wavelength	Derate to value
1064nm	not derated
532nm	not derated
355nm	40% of stated value
266nm	10% of stated value
193nm	10% of stated value

Notes: (g) The 3A-QUAD has a relatively large spectral variation in absorption and has a calibrated spectral curve at all wavelengths in its spectral range to the above specified accuracy. Nova, Orion and LaserStar meters do not support this feature and when used with those meters, the accuracy will be ±3% as above for 532nm, 905nm, 1064nm and 10.6µm but there will be an additional error of up to 3% at other wavelengths in the spectral range 190 – 3000nm.

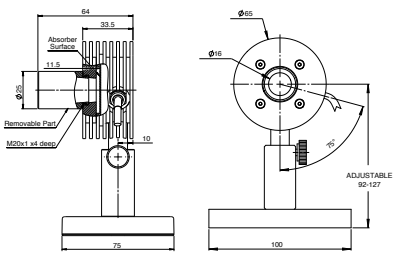
Interface Module on cable



3A-QUAD / 3A-P-QUAD



10A-PPS



1.1.2.3.2 Beam Trap

Up to 50W

BT50A-15

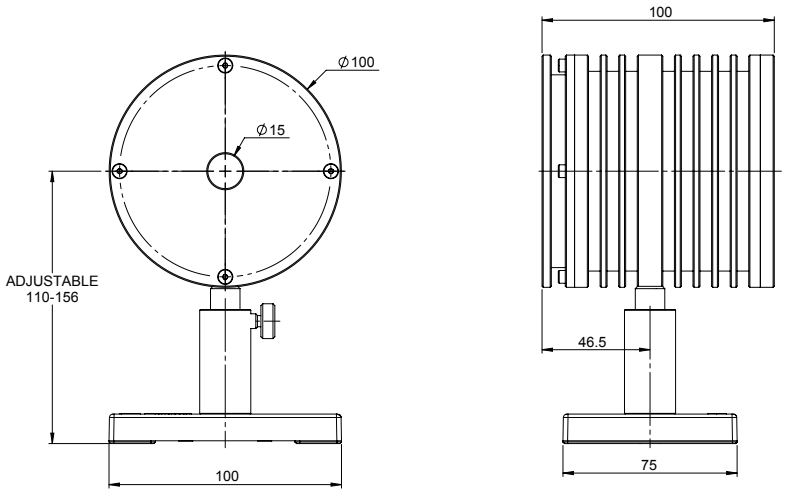
Features

- Does not measure power, traps beam only
- Power capacity up to 50W
- Backscattered power 0.05%
- Pulsed damage threshold 4J/cm^2
- Average power density up to 16kW/cm^2
- Ø15mm aperture

The BT50A-15 absorbs a laser beam that is inserted into the entrance aperture parallel to the unit's optic axis. The beam trap is designed that only a very small fraction of the light is backscattered. The BT50A-15 does not measure power. It is a beam trap only.
When operated at full power, the BT50A-15 can heat up to over 100degC. Note that the absorbing element of the beam trap is graphite which may not be suitable for some environments.

Model	**BT50A-15**	
Use	**Beam trap for CW and pulsed lasers up to 50W average power**	
Absorber Type	Broadband graphite absorber	
Spectral Range µm	0.19 - 20	
Backscatter	0.05% or less, typical	
Aperture mm	Ø15mm	
Maximum Acceptance Angle	±10 degrees	
Maximum Incident Power	50W	
Maximum Average Power Density	16kW/cm^2	
Maximum Energy Density	<100ns pulses 2ms pulses	4J/cm^2 100J/cm^2
Cooling	convection	
Dimensions	See drawing below	
Weight kg	0.9	
Compliance	CE, UKCA, China RoHS	
Version		
Part number	**7Z17204**	

BT50A-15



30mW to 150W

Features

- Convection air cooled
- CW to 30W or 50W, intermittent to 150W
- Ø17.5mm and Ø35mm apertures
- Measure powers up to 4000W by short exposures to laser

Notes: (a) Above 1.1µm there is an additional calibration uncertainty of up to 2%.

Notes: (b) Long pulses (0.5 – 4s) can be used to measure power of high power lasers by measuring the energy of a short exposure. The StarBright, Juno, Juno+ and Centauri meters have a Pulsed Power mode where the user may specify the pulse width and get a reading directly in units of power for this short exposure energy measurement. See also page 85

Notes: (c) Powers up to 4000W can be measured. Recommended exposure times and 1/e² Gaussian beam diameters for very long pulses. Total energy for a series of measurements should not exceed 15kJ. Recommended time between shots 12s.

Laser Power W	Recommended Exposure s	Number of shots before cooling down	Min 1/e² beam dia mm

Part number	**7Z07937**	**7Z07900**	**7Z07901**

Notes: (a) The BeamTrack features are supported by Centauri, StarBright, StarLite, Nova II and Vega meters, Juno, Juno+, Juno-RS and EA-1 interfaces and StarLab application. Position and Size measurements work only in Power mode (but not in single shot Energy mode).

Notes: (b) For powers up to 30W it is recommended to work with the fan off and then the noise level is ~3 times lower. It is also recommended to measure energy with the fan off.

Notes: (c) Position accuracy for the central 10mm of the aperture as limited by beam position resolution. Position can be tracked with ±1mm accuracy over the entire aperture. Accuracy is reduced by a factor of 3 at minimum power. Position measuring center corresponds to geometrical center within <1mm. Position center can be software reset to geometric center or other desired position with Centauri, StarBright or StarLab.

Notes: (d) Assumes laser beam with Gaussian (TEM_{00}) distribution. For other modes, size measurement is relative.

Notes: (e) Accuracy spec will be maintained for beams from 3.5 to 17mm not deviating from center more than 15% of beam diameter. For beams below 8mm in size and powers above 75W error in size can reach ±10%.

Part number	**7Z02793**	**7Z02794**	**7Z02795**	**7Z02797**

Notes: (a) Above 1.1µm there is an additional calibration uncertainty of up to 2% except at the additional calibration point of 2.94µm where the additional uncertainty is 1%.
Notes: (b) Long pulses (0.5 – 4s) can be used to measure power of high power lasers by measuring the energy of a short exposure. The StarBright, Juno, Juno+ and Centauri meters have a Pulsed Power mode where the user may specify the pulse width and get a reading directly in units of power for this short exposure energy measurement. See also page 85
Notes: (c) Calibrated for 900 – 1100nm
Notes: (d) At large angles of incidence, the position the beam hits the absorber should be offset into the direction of incidence by 5-10mm for correct reading and at 20deg incidence the reading will be 5% lower and at 30deg incidence 10% lower

Notes: (e) Recommended exposure times and 1/e² Gaussian beam diameters for very long pulses. Total energy for a series of measurements should not exceed 20kJ (*8kJ). Cooling down time before another 20kJ (*8kJ) series, 10min. Recommended time between shots 12s.

* for L40(500)A-LP2-DIF-35

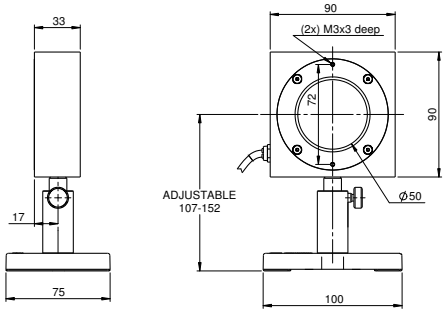
L40(250)A-BB-50 / L40(250)A-LP2-50 / L40(200)A-EX-50



1.1.2.5 Medium Power Large Aperture Thermal Sensors - Apertures to 65mm

300mW to 300W

Features

- Thin profile, very large aperture
- CW to 50W, intermittent to 300W
- Ø50mm to Ø65mm apertures

For L50(250)A-BB-50:

- Pulse energies up to 4,000 Joules
- Measure high power lasers by 0.5-4s exposures

L50(250)A-BB-50

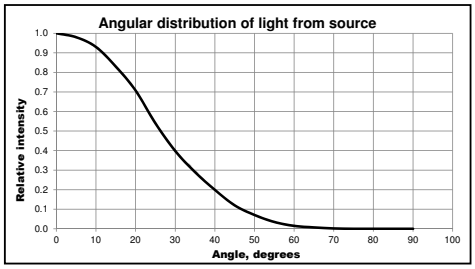
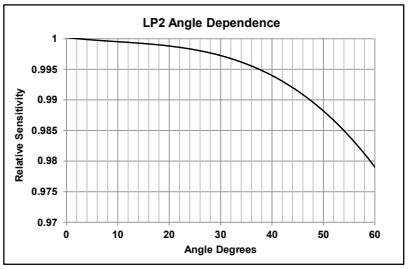
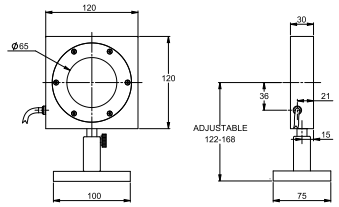
Part number	**7Z02780**	**7Z02771**	**7Z02782**
	Notes: (a) Sensor has a window for gel coupled IPL sources where IPL source is coupled to window with gel or water for measurement. Can also measure air coupled IPLs	Notes: (b) If the source is longer than the aperture, it can overfill and the output can be calculated proportionately	Notes: (d) Accurate measurement of air coupled sources due to low angular dependence of LP2 coating. See graph below. Notes: (e) Above 1.1µm there is an additional calibration uncertainty of up to 2%.

Notes: (c) The assumed angular distribution of the IPL light is given below. The angle dependence of the LP2 coating is shown below.

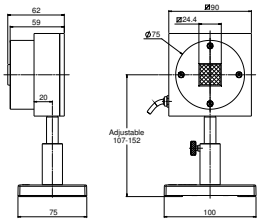




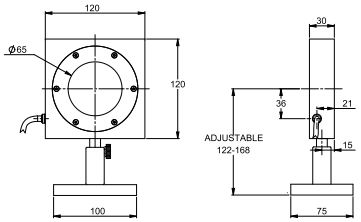
L50(300)A-IPL



L40(150)A-IPL



L50(300)A-LP2-65



1.1.2.6 Medium - High Power Fan Cooled Thermal Sensors

10mW to 150W

Features

- General purpose and high damage threshold
- Fan cooled
- Powers to 150W
- Ø17.5mm to Ø35mm apertures
- F50A-BB-18 very stable reading and wide dynamic range

F50A-BB-18

F100A-PF-DIF-33

F150A-BB-26

Version		
Part number	**7Z07902**	**7Z07936**

Notes: (a) The BeamTrack features are supported by Centauri, StarBright, StarLite, Nova II and Vega meters, Juno, Juno+, Juno-RS and EA-1 interfaces and StarLab application. Position and Size measurements work only in Power mode (but not in single shot Energy mode).

Notes: (b) For powers up to 30W it is recommended to work with the fan off and then the noise level is ~3 times lower. It is also recommended to measure energy with the fan off.

Notes: (c) Position accuracy for the central 20mm of the aperture as limited by beam position resolution. Position can be tracked with ±1mm accuracy over central 32mm of the aperture. Accuracy is reduced by a factor of 3 at minimum power. Position measuring center corresponds to geometrical center within <1mm. Position center can be software reset to geometric center or other desired position with Centauri, StarBright or StarLab.

Notes: (d) Assumes laser beam with Gaussian (TEM_{00}) distribution. For other modes, size measurement is relative.

Notes: (e) Accuracy spec will be maintained for beams from 6 to 35mm not deviating from center more than 15% of beam diameter.

Notes: (f) Calibrated for ~0.8µm, 1.064µm and 10.6µm

Notes: (g) Water temperature range 18-30°C, Water temperature rate of change <1°C/min. Pressure drop across sensor 0.03MPa.

Notes: (h) Position accuracy for the central 10 mm of the aperture as limited by beam position resolution. Position measuring center corresponds to geometrical center within <1mm. Position center can be software reset to geometric center or other desired position with Centauri, StarBright or StarLab.

1.1.2.7.1 Introduction

Introduction to High Power Water Cooled Sensors

Ophir has many years experience supplying measurement systems for high power industrial lasers and has the highest power measuring equipment available on the market – up to 120 kilowatts. Ophir meters also have the highest damage threshold available – up to 10kW/cm² at full power. Ophir supplies water cooled sensors from 250W up to 120kW and air cooled sensors up to 1100W.
All sensors supplied by Ophir have been tested at up to full power and their linearity verified over the entire power range. This is done deflecting a fraction of the power with a beam splitter into a lower power sensor whose linearity has previously been verified by NIST or PTB. In some cases, it is done by measuring the reading over the power range against a higher power sensor that has been previously measured.
The accuracy, linearity and damage specifications have been carefully verified over many years of development and use by the largest existing user base.
In addition to power meters for high powers, Ophir also has beam profilers, beam dumps and protective enclosures for industrial lasers.

Calibration Method and Estimated Accuracy for Ophir High Power Sensors

Ophir high-power sensors (models 5000W, 10K-W, IPM-10KW, 15K-W, Comet 10K, 30K-W, and 120K-W) are ordinarily calibrated using moderate-power lasers, not exceeding 6000W (though in certain cases, sensors can be calibrated at up to 15,000W). In other words, we calibrate high-power sensors using laser powers that are in many cases much lower than the power rating of the sensors being calibrated. This raises the question of calibration accuracy. The following brief explanation will clarify how we know that these highest power sensors are indeed accurate to ±5% over their entire measurement range as specified.

Basing high-power calibration accuracy on lower power calibration measurements is valid, subject to the condition that the sensors are linear all across the full power range.

The calibration measurements themselves (using the moderate-power lasers) are all based on NIST-calibrated master references.
At the lower powers, the reference sensors are based on photodiode detectors; photodiode detectors are well known to be highly linear. At the higher powers, thermal sensors are used as the reference. A series of detailed tests have confirmed that indeed these sensors are highly linear, all the way up to the highest powers for which they are rated.

Since the thermal sensors have been shown to be linear over the entire range of powers, it follows that if the calibration is correct at low powers, it will remain correct at high powers as well.

Some additional points:

- An additional issue is zero offset; although the output may be linear at low powers, there may be a zero offset that, due to the relatively low output at low powers, will cause an error in calibration. For example, if calibration is performed at 200W and the output of the sensor is 10µV/W (a typical value) and there is a zero offset of only 1µV, this will cause a calibration error of 10%. Ophir's calibration method includes measuring the difference between the reading with power applied and without power applied, thus eliminating error due to zero offset. This measurement is taken several times to insure accuracy.

- The above measurement method assures that the calibration inaccuracy due to measurement errors is less than 1%, comparable to the expected errors in our lower powered sensors. In order to verify this, all of our high power sensors have been measured by comparison to various calibration standards. These measurements have shown Ophir sensors to be well within the claimed limits of linearity.

- The Comet 10K series measures the heat rise of the absorbing puck when irradiated by the laser for 10s. In order to calibrate the Comet 10K, we simply irradiate with a lower power laser for longer e.g. 150W for 60s. Thus the heating effect is similar to that of a higher power laser. Tests of the Comet calibrated by this method vs. NIST traceable high power sensors have shown that it is accurate and reproducible.

For more information on calibration please consult our website at **www.ophiropt.com/calibration-procedure/tutorial**

Note regarding water cooling:
Most Ophir high power sensors are water cooled. Customers often have questions about our water cooled sensors such as the correct flow rate and pressure under various conditions and the quality of the water required. For further information on water cooled sensors, please see our tutorial on the subject at **http://www.ophiropt.com/laser--measurement/knowledge-center/article/10000**

1.1.2.7.2 High Power Water Cooled Thermal Sensors

0.5W to 300W

Features

- High powers
- Water cooled
- Up to 300W
- Ø50mm aperture

L250W

L300W-LP2-50

Model	L250W	L300W-LP2-50
Use	**General purpose**	**High power densities and long pulses**
Absorber Type	Broadband	LP2
Spectral Range µm	0.19 - 20	0.35-2.2, 10.6 [a]
Absorption	~88%	>96% from 0.35 to 1.1µm, 75% for 10.6µm
Aperture mm	Ø50mm	Ø50mm
Power Mode		
Power Range	1W - 250W	0.5W - 300W

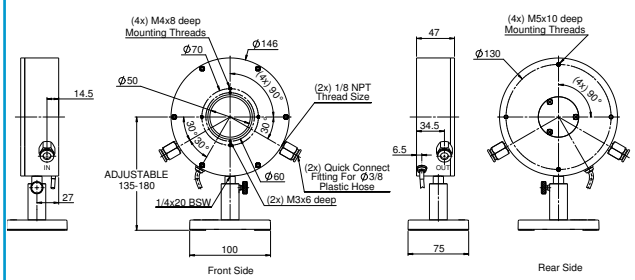
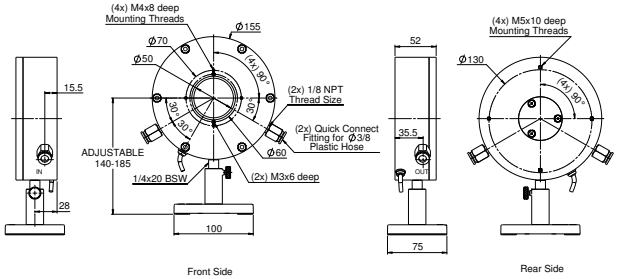
Version	V1	
Part number	**7Z02754**	**7Z02773 / 7Z02788**
Notes: (a)	Calibrated for ~0.8µm, 1.064µm and 10.6µm	For spectral range 0.35 to 1.1µm
Notes: (b)	Water temperature range 18-30°C. Water temperature rate of change <1°C/min. Pressure drop across sensor 0.06MPa. The recommended flow rate can be lowered proportionately at lower than full power but should not be below the minimum. When used at full power with substantially below the recommended flow rate, the damage threshold may be as much as 20% lower. The response time will be optimum with the recommended flow rate.	
Notes: (c)	The 5000WP-LP2-50 has nylon rear housing and nothing but nylon and copper in contact with the water flow. This prevents contamination of the water flow with aluminum and prevents the possibility of corrosion.	

5000W-BB-50 / 5000W-LP2-50



5000WP-LP2-50



1.1.2.7.3 Calorimetric Power Meter

200W to 6000W

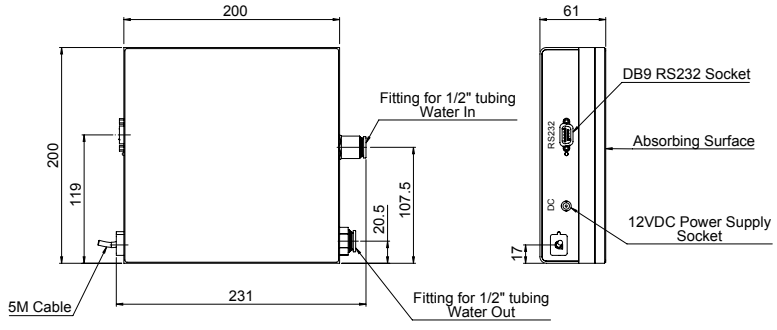
Features

- Very large aperture 200mm x 200mm
- Water cooled
- Up to 6000W
- Smart sensor or RS232 interface

6K-W-BB-200 x 200

Model	**6K-W-BB-200x200**
Use	**Largest size beams to 6kW**
Measurement Method	Calorimetric, measure water temperature rise and flow rate
Absorber Type	Broadband
Spectral Range µm [a]	0.19 - 20
Aperture mm	198 x198mm
Power Mode	
Power Range	200W – 6000W
Power Scales	6kW / 1kW
Power Noise Level	5W
Maximum Average Power Density kW/cm²	1.5 at 1000W 0.4 at 6000W
Response Time with Meter (0-95%) typ. s	50
Calibration Uncertainty ±%	1.9
Power Accuracy ±%	4 [a] [b]
Linearity with Power ±%	2 [b]
Maximum Energy Density J/cm²	
<100ns	0.3
1µs	0.4
0.5ms	5
2ms	10
10ms	30
1s	4000
Cooling	Water
Recommended Flow Rates	6 liter/min [b]
Outputs	1. 5 meter cable terminated in DB15 Smart Connector measuring power only. 2. RS232 with supplied WaterFlowMeter PC Application measuring power, water temp. and water flow rate. In RS232 mode, the sensor is powered by the supplied 12V wall cube.
Fiber Adapters	N.A.
Dimensions	See drawing
Weight kg	3.6
Compliance	CE, UKCA, China RoHS
Version	
Part number	**7Z02764**
Notes: (a)	Calibrated for ~0.8µm and 1.08µm at flow rate of 6 liters/min. Calibration for 10.6µm available
Notes: (b)	Min flow rate at maximum power 6 liter/min. Flow rate may be proportionately less at lower power. Flow rate dependence of reading is ±2% for flow rates between 4 and 8 liters/min. Water temperature range 15-25°C. Water temperature rate of change <1°C/min, at max power, proportionately less at lower power. Pressure drop across sensor 0.05MPa. Water should be filtered with a <50µm filter.

6K-W-BB-200 x 200



1.1.2.7.4 Very High Power Water Cooled Thermal Sensors

100W to 11kW

Features

- Very high powers
- Water cooled
- Up to 11kW
- Up to Ø45mm apertures

10K-W-BB-45

10K-W-BB-45
With optional scatter shield

Model	**10K-W-BB-45**
Use	**High power up to 11kW**
Absorber Type	Beam deflector + broadband absorber
Spectral Range µm [a]	0.8 - 2, 10.6
Aperture mm	Ø45mm
Power Range	100W – 11kW
Power Scales	11kW / 6kW / 600W
Power Noise Level	1W
Backscattered Power [b, e]	~3.5% without Scatter Shield, ~1% with Scatter Shield
Maximum Average Power Density kW/cm²	See note [c] and table [1] below
Response Time with Meter (0-95%) typ. s	2.7
Calibration Uncertainty ±%	1.9
Power Accuracy ±%	5 [a]
Linearity with Power ±%	2
Cooling	water [d]
Minimum Water Flow Rate	8 liter/min at full power [d]
Water Connectors [e]	Quick connector for 3/8" OD nylon tubing
Cable Length	5 meters
Optional Scatter Shield Accessory [e]	10K-W / 15K-W Scatter Shield (P/N 7Z08295)
Weight kg	4.5
Compliance	CE, UKCA, China RoHS
Version	V4
Part number	**7Z07102**
IPM-10KW Ruggedized Industrial Version	**7Z07106** see page 74A

Notes: (a) Calibrated at 1.07µm and 10.6µm.
For other wavelengths in the range 0.8 – 2µm add up to ±2% to the calibration error.

Notes: (b) When scatter shield is installed, use the NIRS setting to compensate for slightly higher reading. When not installed, use the NIR setting.

Notes: (c) For circular beam centered within ¼ of beam diameter. IMPROPERLY CENTERED BEAM CAN CAUSE DAMAGE TO SENSOR.
Maximum tilt angle ±5 degrees. For rectangular beam please consult Ophir representative.

Notes: (d) Water temperature range 18-30ºC. Water temperature rate of change <1ºC/min. Pressure drop across sensor 0.1MPa. The recommended flow rate can be lowered proportionately at lower than full power but should not be below 3 liter/min. The response time will be optimum with the recommended flow rate. For solutions for prolonged usage with untreated water (tap water, non DI water), please contact Ophir.

Notes: (e) Heavy duty stand is available as optional extra. For further information and other options see **Accessories for High Power Sensors** on pages 76-80.

Table: (1)

Beam diameter	Max power density	Max energy density		
		1ms pulse width	3ms pulse width	10ms pulse width
<15mm	10kW/cm²	30J/cm²	60J/cm²	150J/cm²

1.1.2.7.4 Very High Power Water Cooled Thermal Sensors

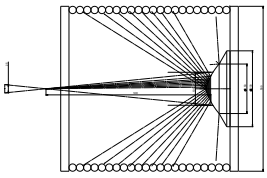
100W to 120kW

Features

- Highest powers
- Water cooled
- Up to 120kW
- Ø200mm aperture

30K-W-BB-74



Laser Beam Path

120K-W

Model	30K-W-BB-74	120K-W
Use	**High power up to 30kW**	**Measuring Highest powers to 120kW**
Measurement Type	Beam deflector + broadband absorber	Water cooled beam absorber chamber with deflecting cone. Separate power measuring unit monitoring input and output cooling water flow and temperature
Spectral Range µm	0.8 - 2, 10.6	0.9 –1.1 [a]
Aperture mm	Ø74mm	Ø200
Power Range for Calibrated Reading	100W – 30kW	10kW – 120kW
Power Noise Level	1W	±20W with stable water temperature
Backscattered Power	~4.3% without Scatter Shield, ~1.3% with Scatter Shield [b, c]	Less than 1%
Maximum Average Power Density kW/cm²	10kW/cm² anywhere in the beam	Designed for near Gaussian beam. The 1/e² beam diameter should have a divergence of 0 to 6 degrees and should be Ø100mm in diameter at the reflecting cone (see sketch above where the beam may also be collimated and not divergent as long as beam diameter requirement is met).
Beam Centering Requirements IMPROPERLY CENTERED BEAM CAN CAUSE DAMAGE TO SENSOR	For circular beam centered within ¼ of beam diameter. Maximum tilt angle ±5 degrees. For rectangular beam please consult Ophir representative.	Beam to be centered on deflecting cone ±5mm and parallel ±2degrees
Response Time 0-95% typ	7s	40s at flow rate 60 liter/min and 60s at flow rate 20 liter/min
Calibration Uncertainty ±%	1.9	1.9
Power Accuracy ±%	5 [a]	5 [a]
Linearity with Power ±%	2	2
Cooling Requirements	25 liter/min at full power, proportionally less at lower power. Min flow rate 6 liter/min. Water temperature range 15-30ºC. Water temperature rate of change <1ºC/min [d]	Water flow rate, 60 liters/min at max power. Inlet temperature 15-20degC. Inlet water temperature rate of change <0.3degC/min at full power, proportionately less at lower power [b, c]
Water Pressure Drop across Beam Absorber	Pressure drop across sensor ~0.2MPa. Pressure drop across 8 meters of ½" tubing with 9.5mm ID is ~0.3MPa	0.4MPa at 60 liter/min flow rate
Water Connections	Quick connector for ½" OD nylon tubing [c]	Up to 4 meters in each direction of 1" OD 13/16" ID flexible nylon tubing
Outputs	10 meter cable terminated in DB15 smart connector	1. Cable terminated in DB9 plug with RS232 ASCII output reading power, flow rate and temperature on PC (using WaterFlowMeter PC App). Cable lengths 10 meters (recommended for access to full data). 2. Cable terminated in DB15 Ophir smart plug reading power.
Optional Scatter Shield Accessory [c]	30K-W Scatter Shield (P/N 7Z08293)	NA
Dimensions	See drawing below	See drawing below
Weight kg	19	Beam Absorber 50kg. Power measuring unit 10kg
Compliance	CE, UKCA, China RoHS	CE, UKCA, China RoHS
Version	V2	
Part number	**7Z02757**	**7Z02691**
Notes: (a)	Calibrated at 1.07µm. For other wavelengths in the range 0.8 – 2µm add up to ± 2% to the calibration error	Calibrated for 1.07 µm
Notes: (b)	When scatter shield is installed, use the 107S laser setting to compensate for the slightly higher reading. When not installed, use the 107 setting	Minimum flow rate should not be below 20 liter/min. It is recommended that the user install a safety interlock flow switch on the return water line (after beam dump) to immediately shut down the laser if flow rate drops
Notes: (c)	For further information and options see **Accessories for High Power Sensors** on pages 76-80	For solutions for prolonged usage with untreated water (tap water, non DI water), please contact Ophir
Notes: (d)	For solutions for prolonged usage with untreated water (tap water, non DI water), please contact Ophir

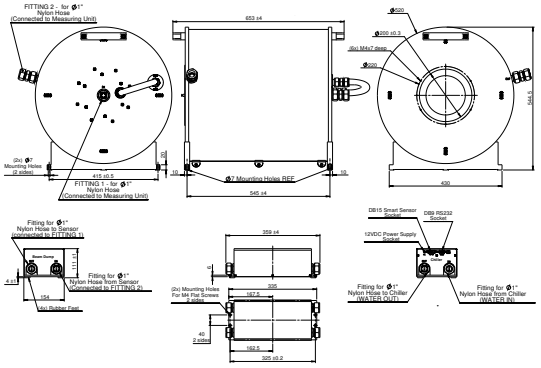
120K-W



1.1.2.8 IPM Industrial High Power Sensor

Introduction

Based on the tried-and-true 10K-W sensor, the new IPM modular industrial sensor for measuring the average power of high-power lasers up to 11kW is ideal for tough industrial use. Ruggedized by design, it has all the features needed for reliable, fail-safe operation in a tough operational environment. Its modular design provides the flexibility needed to address customers' specific needs.
The IPM-10KW has heavy duty connectors and an interlock output. For more protection, the user can order the IPM-Shutter10 which provides an automated shutter with a field replaceable anti reflective coated window (see next section). Integration into modern automation systems is available with the IPM-COM communication module (EtherNet and Profinet).

1.1.2.8.1 IPM-10KW – Industrial Sensor

- ISO17025 NIST & PTB traceable calibration
- Measure up to 11kW
- Modular architecture
- Heavy duty design with industrial interface and connectors
- Interlock to protect from overpower or cooling water failure
- Real time visibility, traceability and logging for predictive maintenance

IPM-10KW

Model	**IPM-10KW**
Use	**Laser power measurement in industrial environment up to 11kW**
Control	RS232
Absorber Type	Beam deflector + broadband absorber
Spectral Range µm [a]	0.9-1.1µm, 10.6µm
Aperture mm	Ø45mm
Power Mode	
Power Range	100W – 11kW
Power Scales	11kW / 6kW / 600W
Power Noise Level	5W
Backscattered Power	~3.5% [b]
Maximum Average Power Density kW/cm²	See note [c] and table [1] below
Response Time with Meter (0-95%) typ. s	2.7
Response Time with Meter (0-99%) typ. s	10
Power Accuracy ±%	5 [a]
Repeatability ±%	0.4
Linearity with Power ±% (0-100% range)	2
Linearity with Power ±% (0-90% range)	1.5
Energy Mode	
Energy Range	60J – 10kJ
Energy Scales	10kJ / 5kJ / 500J
Energy Accuracy	Additional 2% error to power accuracy
Minimum Energy J	60
Maximum Energy Density J/cm²	See table [1] below
Cooling	Water [d]
Minimum Water Flow Rate	8 liter/min at full power [d]
Water Connectors	Quick connector for 12mm OD nylon tubing (see page 80)
Weight kg	5
Connectors [e] 	Interlock, M8 male, 3-pin RS232, M12 female 5-pin Flow meter – M8 female, 6-pin Power/IPM-COM, M12 male, 5-pin

Cables [e]	**Part**	**P/N**
	RS232 cable, M12 male 5-pin to D9 female, 1.8m (supplied with sensor)	**7Z10532**
	Power cable, M12 female 5-pin to flying leads, 1.5m (supplied with sensor)	**7E01519**
	Interlock cable, M8 female 3-pin to flying leads, 1.5m (not supplied)	**7E01513**
	Water Flow Meter cable, M8 male 6-pin to flying leads, 1.5m (not supplied)	**7E01536**

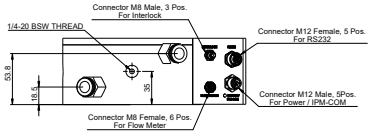
Related Products [a] [b]	**Name**	**Description**	**P/N**
	IPM-SHUTTER10	Combined protective shutter with built in scatter shield	**7Z08409**
	IPM-SHUTTER10 Window replacement kit	Replacement anti reflective coated window	**7Z08411**
	IPM-COM-Profinet	Profinet communications adapter with AIDA connectors	**7Z08404**
	IPM-COM-EtherNet/IP-M	EtherNet/IP communications adapter with M connectors	**7Z08405**

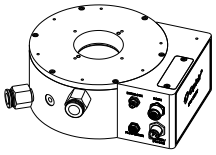
Compliance	CE, UKCA, China RoHS
Part number	**7Z07106**

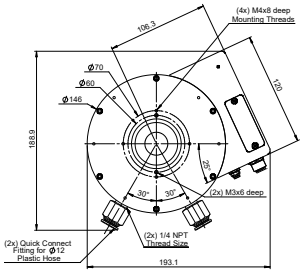
Notes: (a) Calibrated at 1.07µm and 10.6µm. When working at 10.6µm (CO2), if using the SHUTTER10 unit, the window should be removed.
Notes: (b) The shutter unit IPM-SHUTTER10 has a built-in scatter shield. If this is installed, the backscatter is reduced to ~1%.
Notes: (c) For circular beam centered within 25% of beam diameter. IMPROPERLY CENTERED BEAM CAN CAUSE DAMAGE TO SENSOR. Maximum tilt angle ±5 degrees. For rectangular beam please consult Ophir representative.
Notes: (d) Water temperature range 18-30ºC. Water temperature rate of change <1ºC/min. Pressure drop across sensor 0.1MPa. The recommended flow rate can be lowered proportionately at lower than full power but should not be below 3 liter/min. The response time will be optimal with the recommended flow rate. For solutions for prolonged usage with untreated water (tap water, non DI water), please, contact Ophir.
Notes: (e) See IPM User Manual for details of connectors and cables

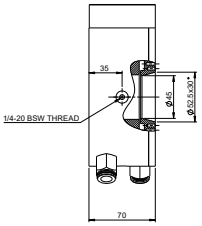
Table (1)	Beam diameter	Max power density	Max energy density – by pulse width			
			1ms PW	**3ms PW**	**10ms PW**	**100ms PW**
	<15mm	10kW/cm²	30J/cm²	60J/cm²	150J/cm²	1350 J/cm²
	15 – 20mm	7kW/cm²	20J/cm²	40J/cm²	100J/cm²	900 J/cm²
	20 – 40mm	5kW/cm²	15J/cm²	30J/cm²	70J/cm²	600 J/cm²
	40 – 45mm	4kW/cm²	12J/cm²	25J/cm²	60J/cm²	500 J/cm²

IPM-10KW







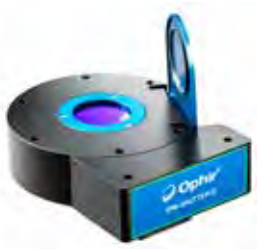


1.1.2.8.2 IPM-SHUTTER10 Shutter Assembly for IPM-10KW

For usage in a dirty industrial environment, the IPM-10KW can be fitted with an automated dust tight shutter assembly to protect the unit from dust and debris. The shutter unit has a built-in scatter shield and includes a field replaceable antireflection coated protective window.

- Built-in scatter shield
- Antireflective coated window [a]
- Motorized dust-resistant shutter
- IP62 rated

IPM-Shutter10



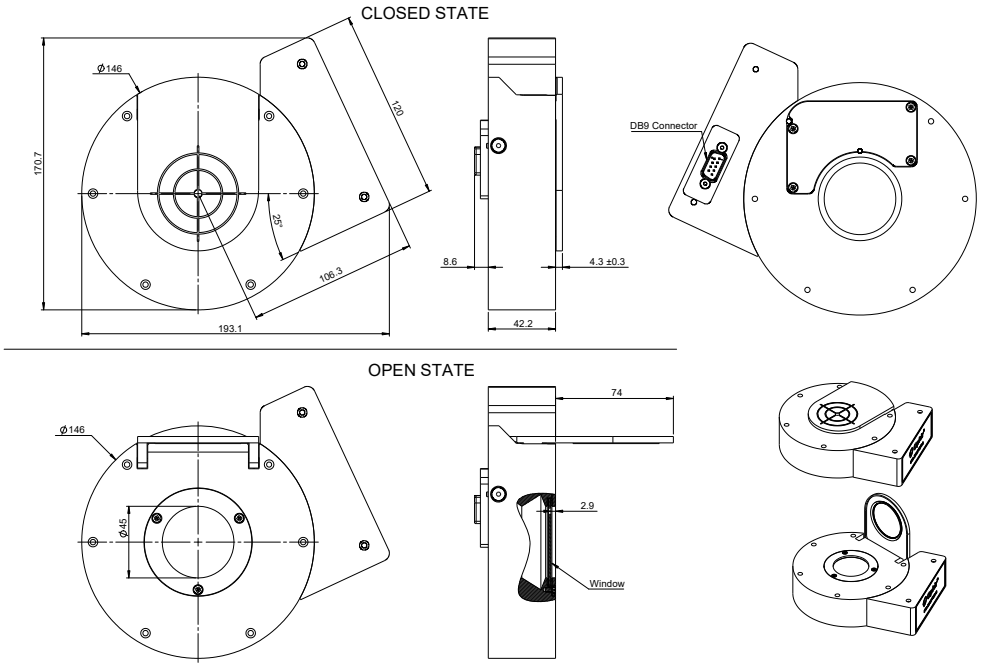
IPM-10KW with IPM-Shutter10

With shutter open

Model	**IPM-SHUTTER10**		
Use	**Provides IP62 in industrial environment**		
Control	Via host IPM-10KW unit		
Aperture mm	Ø45mm		
Backscattered Power [b]	~1%		
Weight kg	2		
Connectors	Connection to IPM-10KW unit – D9		
Part Numbers and Optional Accessories	**Name**	**Description**	**P/N**
	IPM-SHUTTER10	Combined protective shutter. Includes built in scatter shield	**7Z08409**
	IPM-SHUTTER10 Window replacement kit	Replacement anti reflective coated window	**7Z08411**
Related Products	**Name**	**Description**	**P/N**
	IPM-10KW	IPM industrial laser power sensor	**7Z07106**
	IPM-COM-Profinet	Profinet communications adapter with AIDA connectors	**7Z08404**
	IPM-COM-EtherNet/IP-M	EtherNet/IP communications adapter with M connectors	**7Z08405**

Notes: (a) When working at 10.6um (CO2), the window should be removed.
Notes: (b) Using built in scatter shield, use the NIRS or CO2S setting to compensate for slightly higher reading.

IPM-SHUTTER10



1.1.2.8 IPM Industrial High Power Sensor

1.1.2.8.3 IPM-COM – IPM adapter for industrial protocols

Modern automation systems integrate equipment from multiple vendors into a common Ethernet infrastructure. The IPM-COM is an industrial communication module enabling the integration of the IPM industrial sensor into Profinet or EtherNet/IP automation systems. For additional protocols please approach your local Ophir sales representative.

- Connects to the IPM sensor to provide industrial communication protocols
- Supports communication and power daisy chaining
- Supports Profinet, EtherNet/IP
- Industrial ruggedized housing and connectors
- Mounting plate and holes for wall mounting
- Two connector options: M12 & Mini 7/8", or AIDA

IPM-COM-Profinet

IPM-COM-EtherNet/IP-M

Model	IPM-COM				
Use	**Support industrial communication protocols for IPM sensor**				
Connectors	2x Industrial Ethernet connectors, 2x 24V power connectors, 1x M12 interconnection with the IPM sensor				
Cables	Cable to IPM sensor, M12 male to M12 female, 5-pin, 1.5m (P/N 7E01540, supplied)				
Weight kg	2

1.1.2.10.1 Fiber Adapter for Ophir High Power Sensors

Adapters for high power fiber connectors are available for Ophir sensors L1500W and 5000W for use in industrial environments.

The fiber adapters allow mounting of QBH fiber terminators to Ophir sensors. When using an adapter, the fiber output is centered on the sensor surface and is isolated from surrounding dust and contaminants. Choice of the correct adapter model depends on the power and divergence angle of the laser being measured, see specs below.

QBH-L-Fiber Adapter Mounted on 5000W sensor

Description	**QBH fiber adapter for high power sensors models**	
Use	**Adapter for direct measurement of QBH fiber output**	
Sensors Supported	L1500W-LP2-50, L1500W-BB-50, 5000W-LP2-50 and 5000W-BB-50 [a]	
Added Error	1% for BB type coatings	
Housing Temperature at Max Power	55°C [b]	
Cooling	Water, maximum temperature 30ºC	
Fiber Adapter Water Flow Requirements	2 liter/min, minimum [c]	
Water Connectors	(2x) Quick Connect Fitting For Ø3/8 Plastic Hose [d]	
Model	QBH-L-Fiber Adapter	QBH-S-Fiber Adapter
Maximum Beam Divergence Half Angle [e]	120 mrad (180 mrad)	180 mrad (270 mrad)
Minimum Beam Divergence Half Angle	See note [f]	See note [f]
Dimensions	See drawing below	See drawing below
Part number	**7Z08348**	**7Z08349**

Note: (a) Please note that older versions of the above sensors do not have the requisite 4 threads on Ø70mm circle on their front flange and cannot be used with the QBH adapter.
Note: (b) When using BB type coatings temperature may reach 80°C at midpoint of adapter.
Note: (c) The water flow requirements of the fiber adapter are much lower than that of the water-cooled sensor (see the sensor data sheet for details). Therefore, the fiber adapter can be connected in series with the sensor water supply but then the water flow rate of both will have to meet the sensor minimum water flow rates.
Note: (d) For Metric water connectors see page 80.
Note: (e) Divergence angle given defines radius of beam containing 86% of power, the divergence of 98% of the power is given in brackets.
Note: (f)

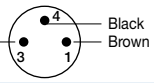
1.1.2.10.2 Protective Housing for 1000W and L1500W Series Sensors

For use with 1000W and L1500W sensors in industrial environments where sensors may be contaminated by debris from material working process. The protective housing and shutter prevent contamination of the sensor, particularly the absorbing surface, by this debris. The housing has a solenoid actuated shutter that can be opened when needed for measuring and be closed otherwise. The protective housing is fastened to the front flange of the sensor [a].

Protective Housing for 1000W / L1500W
Mounted on Sensor (shutter open)
Rear view (cables)

Protective Housing for 1000W / L1500W
Mounted on Sensor (shutter closed)
Front view (water connectors)

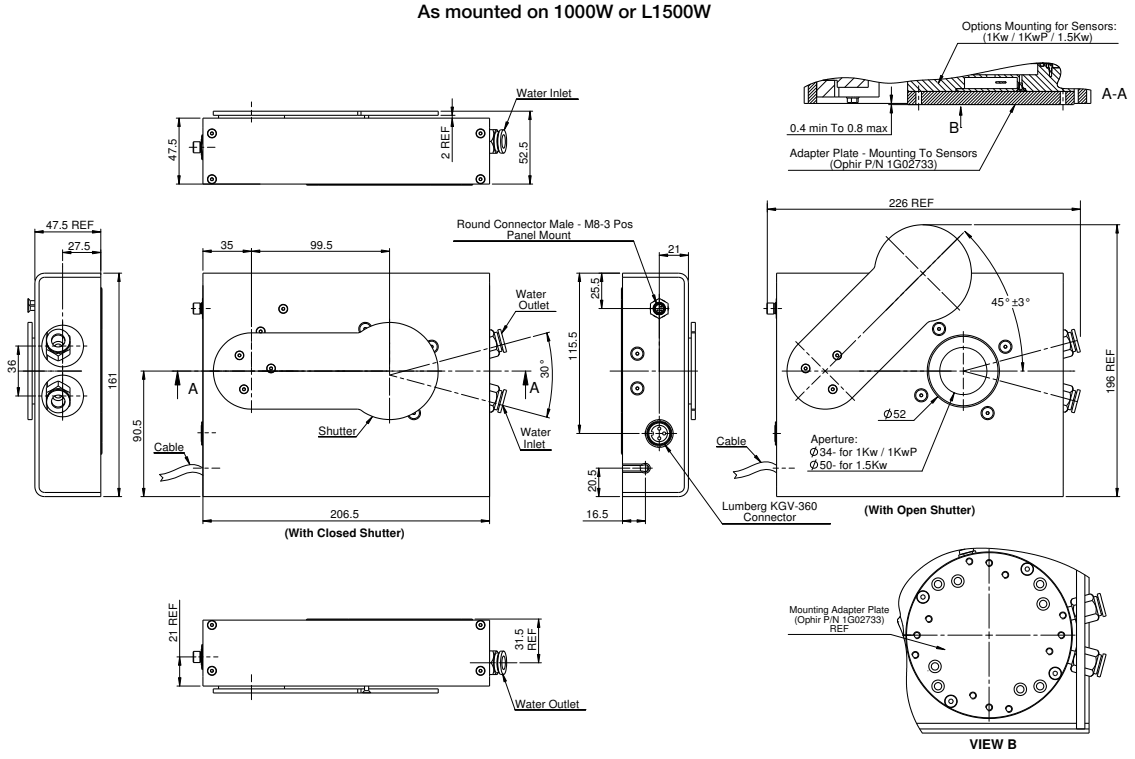
Model	**1000W / L1500W Protective Housing** [b]
Use	**Protection from debris of material working process**
Sensors Supported	For 1000W and L1500W. Needs threaded front flange [a]
Aperture	Exposes full aperture of sensors
Solenoid Actuating Power	24VDC 1A, Shutter is normally Closed
Electrical Connection	Lumberg SV30 male connector with 2m cable (P/N 7Z10377) as supplied. Black wire (pin3) is ground, Red wire (pin1) is +24VDC, no wire connected (pin 2)
Interlock	Interlock switch is open if shutter is closed. This can be used to protect the shutter from accidental exposure to the laser
Electrical Connection for Interlock	M8-3 Pin male connector (pin 1,4 connected to switch contacts). 1.5m cable (P/N 7E01513A) included, brown and black wires are the switch contacts. Pin 3 - no wire connected
Dimensions	See drawings below
Housing Material	Sheet aluminum
Part number	**7Z08334**



Note: (a) When fitting the housing to previous versions of the above sensors not having the requisite threads on their front flange, it will be necessary to exchange the front flange of the sensor with a new one having the requisite mounting threads. For details, consult Ophir representative.

Note: (b) The 1000W / L1500W protective housing is provided with an adapter plate (P/N 1G02733) so the sensor bottom surface will protrude below the side walls of the housing thus enabling easy mounting to the work surface (see view B in drawing below).

Protective Housing for 1000W and L1500W
As mounted on 1000W or L1500W

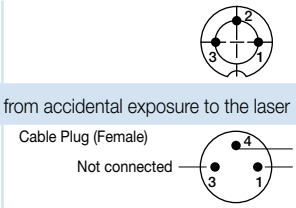


1.1.2.10.3 Protective Housing for 5000W, 10K-W and 15K-W Series Sensors

For use with 5000W, 10K-W and 15K-W sensors in industrial environments where sensors may be contaminated by debris from material working process.
The protective housing and shutter prevent contamination of the sensor, particularly the absorbing surface, by this debris. The housing has a solenoid actuated shutter that can be opened when needed for measuring and be closed otherwise.
The protective housing is fastened to the front flange of the sensor [(a)].

Protective Housing for 5000W / 10K-W / 15K-W
Mounted on Sensor (shutter open)
Rear view (cables and water connector)

Model	**5000W / 10K-W / 15K-W Protective Housing**
Use	**Protection from debris of material working process**
Sensors Supported	For 5000W, 10K-W and 15K-W. Needs threaded front flange [(a)]
Aperture	Exposes full aperture of sensors
Solenoid Actuating Power	24VDC 1A, Shutter is normally Closed
Electrical Connection	Lumberg SV30 male connector with 2m cable (P/N 7Z10377) as supplied. Black wire (pin3) is ground, Red wire (pin1) is +24VDC, no wire connected (pin 2)
Interlock	Interlock switch is open if shutter is closed. This can be used to protect the shutter from accidental exposure to the laser
Electrical Connection for Interlock	M8-3 Pin male connector (pin 1,4 connected to switch contacts). 1.5m cable (P/N 7E01513A) included, brown and black wires are the switch contacts. Pin 3 - no wire connected
Dimensions	See drawing below
Housing Material	Sheet aluminum
Version	V1
Part number	**7Z08344**



Notes: (a) When fitting the housing to previous versions of the above sensors not having the requisite threads on their front flange, it will be necessary to exchange the front flange of the sensor with a new one having the requisite mounting threads. For details, consult Ophir representative.

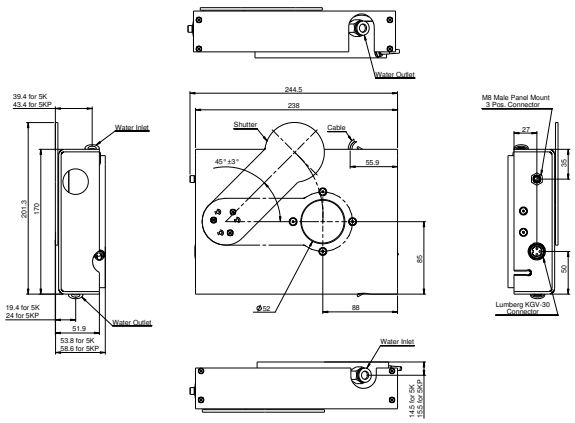
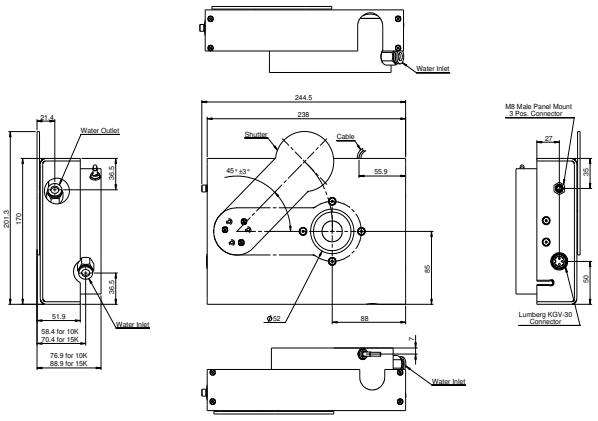
As mounted on 5000W



As mounted on 10K-W / 15K-W



1.1.2.10.4 Scatter Shield

Scatter Shield for mounting on front flange of 10K-W / 15K-W, 16K-W and 30K-W to reduce backscattered power.

3 to 4% of the light impinging on the 10K-W, 15K-W, 16K-W and 30K-W is backscattered in a diffuse manner. This can cause heating of surrounding surfaces. Scatter Shields are available to greatly reduce this affect. When installed on the front flange of the sensors, they will reduce the backscatter by about 70%.
The shield works in two ways:
1. By absorbing much of the backscattered light.
2. By reflecting some of it back into the sensor where that light is reabsorbed.

Since some of the light is reabsorbed, the power reading is 1-1.5% higher than without the shield, so an additional laser setting is given for use when the shield is mounted to adjust for this difference.

The scatter shield comes with a protective cover with target pattern for alignment that also can be purchased separately, (see page 80).

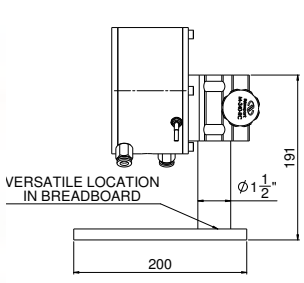
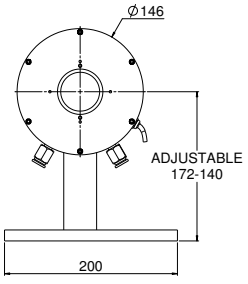
1.1.2.10.5 Heavy Duty Stand for 10K-W and 15K-W

For sustained use in an upright position, it may be advisable to purchase the heavy duty stand for the 10K-W and 15K-W due to their large size and weight. The heavy duty stand bolts onto existing threads on the rear of the 10K-W and 15K-W.

Model	Heavy Duty Stand for 10K-W and 15K-W
Part number	7Z08330

Heavy Duty Stand for 10K-W and 15K-W (Shown with a 15K-W sensor)





1.1.2.10 Accessories for High Power Water Cooled Sensors

1.1.2.10.6 Metric Water Connectors for Water Cooled Sensors

The standard water connection supplied with Ophir water cooled sensors are quick connect fittings for 3/8" and 1/2" plastic tubing. Metric water connectors are also available as follows:

7Z08352 1/4" - 12mm

7Z08353 1/8" - 10mm

Connector (set of 2 ea.)	For use with	Part Number
1/4" NPT to 12mm O.D. tubing	16K-W & 30K-W	**7Z08352**
1/8" NPT to 10mm O.D. tubing	All other water cooled sensors & QBH Adapters	**7Z08353**

1.1.2.10.7 Protective Covers with Target Pattern for High Power Sensors and for Scatter Shields

All the protective covers are made of black anodized aluminum, and have a cross pattern for alignment.
Sensors: The 5000W, 10K-W, 15K-W sensors are supplied with the 10K-W Protective Cover. This protective cover also fits the 1000W and L1500W sensors, but is not supplied with these sensors. The protective cover can be ordered separately for these sensors. The 16K-W sensor is supplied with the 16K-W Protective Cover. The 30K-W sensor is supplied with the 30K-W Protective Cover.

Scatter Shields: 10K-W / 15K-W Scatter Shield (P/N 7Z08295), 16K-W scatter shield (P/N 7Z08355) and 30K-W Scatter Shield (P/N 7Z08293) are supplied with their respective protective covers (P/N 7Z08345 for 10K-W / 15K-W, P/N 7Z08356 for 16K-W and P/N 7Z08346 for 30K-W). For more information on scatter shields see page 79.

All protective covers can also be ordered separately (see table below).

Protective Cover	For use with	Part Number
10K-W Protective Cover	15K-W, 10K-W, 5000W, L1500W, 1000W without scatter shield	**1G01332**

1.1.2.11.1 Helios Plus

50W to 12,000W

Helios Plus - Profinet / Helios Plus - EtherNet/IP / Helios Plus - EtherCAT

Helios Plus - EtherNet/IP-M

Features

- No water cooling, up to 12,000W
- Profinet / EtherNet/IP / EtherCAT and RS232 interfaces
- Remote actuated protective cover
- Dual wavelength range

The Helios Plus measures high power industrial lasers of up to 12kW by measuring the energy of a short time exposure to this power. The laser is set to a pulse of from 0.3 to several seconds. The Helios Plus measures the energy and exposure time of this sample of the power, and from this calculates the power. By keeping the pulse energy under 5 kJ, there is no need for water cooling and the sensor can be kept to a compact size. It works in two wavelength ranges: 900-1100nm (Near IR) and 450-550nm (Blue-Green). The sensor is housed in a dust-resistant industrial body to keep the Helios Plus in clean working order even under harsh factory conditions. Its protective cover can be opened and closed remotely to protect the sensor when not in use. Its protective window is antireflection coated to reduce back reflection from high power beams. The Helios Plus offers three industrial communication protocols: Profinet, EtherNet/IP and EtherCAT, with an additional RS232 interface. The Helios Plus comes with a simple PC application for easier integration into the customer's system. It is equipped with two power and two data ports for easy integration into existing line or ring topologies as well as an RS232 connection.

Model	Description	Communication	Data connectors	Power connectors	P/N
Helios Plus - Profinet	Profinet, AIDA compatible connectors for power and data	Profinet, RS232	2x AIDA compatible RJ45 connectors, 1x RS232 - DB9 connector	2x AIDA compatible connectors	**7Z07100**
Helios Plus - EtherNet/IP	EtherNet/IP, AIDA compatible connectors for power and data	EtherNet/IP, RS232	2x AIDA compatible RJ45 connectors, 1x RS232 - DB9 connector	2x AIDA compatible connectors	**7Z07101**
Helios Plus - EtherNet/IP-M	EtherNet/IP, M12 connector for data, Mini 7/8" connector for power	EtherNet/IP, RS232	2x M12 D - coded connectors, 1x RS232 - DB9 connector	2x Mini 7/8" connectors (male / female)	**7Z07104**
Helios Plus - EtherCAT	EtherCAT, AIDA compatible connectors for power and data	EtherCAT, RS232	2x AIDA compatible RJ45 connectors, 1x RS232 - DB9 connector	2x AIDA compatible connectors	**7Z07105**

Use	**High power industrial laser measurement**
Absorber Type	LP2, absorption ~94%
Power Range	50W - 12kW
Energy Range	100J - 5kJ
Exposure Time (see table below)	0.3- 4s [a]
Wavelength	450 - 550nm, 900 - 1100nm
Aperture	ø50mm
Max Beam Diameter	35mm
Maximum Energy Density	4kJ/cm^2
Calibration Uncertainty	±1.9%
Accuracy [b]	±3% (900 - 1100nm) ±3.5% (450 - 550nm)
Linearity with Energy	±1.5% [c]
Reproducibility	±1%
Response Time	3s
Waiting Time for Next Measurement	12s
Maximum Exposure Before Cooling Down is Necessary	Maximum operating temperature of 60ºC will be reached after exposure to 30kJ (e.g. 6 shots at 5000W, 1s). Cooling down time before another 5kJ shot, 3min.
Power Supply	24 VDC ±5%, max 2A (for daisy-chaining)
Power Consumption	4.8W
Dimensions	Model: Profinet, EtherNet/IP, EtherCAT - (L x W x H) mm - 200 x 100 x 84 (closed); 200 x 123 x 144 (open) Model: EtherNet/IP-M - (L x W x H) mm - 200 x 122 x 84 (closed); 200 x 145 x 144 (open)
Position of Mounting Holes	6.6 mm holes spaced at 90x190 mm
Weight	Model: Profinet, EtherNet/IP, EtherCAT - 2.5kg, EtherNet/IP-M - 2.7 kg
Indicators	7 indicator LEDs
Operating Temperature	10 - 60ºC
Humidity	10 - 80%

Recommended exposure times and 1/e^2 Gaussian beam diameters	Laser Power W	Recommended Exposure s	Min 1/e^2 beam dia. mm	Laser Power W	Recommended Exposure s	Min 1/e^2 beam dia. mm
	50	2	9	2000	1	12

Cover	Motor driven cover opens sideways
Accessories Supplied with Helios Plus	Model: Profinet, EtherNet/IP, EtherCAT - 1. Power Supply Cable (P/N 7Z10458A), 2. Data Cable – Profinet & EtherCAT (7E01298), EtherNet/IP (P/N 7E01299) Model: EtherNet/IP-M - No accessories included
Optional Accessories	Model: Profinet, EtherNet/IP, EtherCAT - 1. D9F to D9M Shielded 10m RS232 Cable (P/N 7E01209), 2. Helios Plus Window Replacement Kit (P/N 7Z08369) Model: EtherNet/IP-M - 1. D9F to D9M Shielded 10m RS232 Cable (P/N 7E01209), 2. Helios Plus Window Replacement Kit (P/N 7Z08369), 3. Power Supply Cable, 7/8" to flying leads termination 2m (P/N 7E01535), 4. Data Cable, EtherNet/IP M12 to RJ45 plug IP67 3m Cable (P/N 7E11211)
Compliance	CE, UKCA, China RoHS
Version	
Part number	**See P/Ns in model table above**

Notes: (a) Repetitive pulses can also be measured as long as the total exposure time is within this range.
(b) The power is calculated by measuring the energy and exposure time. The laser pulse is assumed to be rectangular for this calculation.
(c) For pulse widths in the range 0.3 – 4s.

* For sensors drawings please see page 82

1.1.2.11.2 Ariel

200mW to 8000W

Ariel with window attached

Features

- Measures up to 8000W
- Compact and self-contained with built in display, battery, and Bluetooth communication
- No Water Cooling
- Dust proof, splash proof
- Includes a detachable diffuser for high power density beams
- Wavelengths: 440 - 550nm, 900 – 1100nm, 2.94µm, 10.6µm
- High thermal capacity of 14KJ for uninterrupted consecutive measurements
- Only 3 seconds to display measurement
- Long battery life: more than 15 hours
- Two measurement modes: short exposure ‘power-from-pulse’ and continuous
- Supported by PC and Android applications

In ‘power-from-pulse’ mode, the Ariel measures high power industrial lasers of up to 8kW by measuring the energy of a short exposure to this power. The laser is set to deliver a pulse of from 0.05 to several seconds. The Ariel then measures the energy and duration of the laser pulse and calculates the power.
In continuous mode, the Ariel measures up to 500W for as long as 20s, or up to 30W continuously. The Ariel is ideal for usage in tight spaces such as additive manufacturing chambers as well as for production process quality control and R&D.

Model	**Ariel**			
Use	**High power laser measurement by short exposure**			
Absorber Type	LP2			
Power Range	200mW - 8,000W			
Exposure Time (see table below)	Pulsed Mode: 0.05 - 2s. [a] CW mode: 10s to continuous depending on power level			
Wavelength	Window: 440 - 550nm, 900 - 1100nm [b] Diffuser:440 - 550nm, 940 - 1100nm [b] Without window or diffuser: 2.94µm [c], 10.6µm [c]			
Aperture	Ø32mm. Maximum beam diameter for Gaussian beam 22mm. With diffuser Maximum beam diameter for Gaussian beam 10mm.			
Calibration Uncertainty	±1.9%			
Power Accuracy	900 - 1100nm, 2.94µm, 10.6µm: ±3%; 440 - 550nm: ±3.5% [a] [b]			
Minimum Power for Pulse Width Measurement	440 - 800nm, >20W; 800 - 1100nm, >10W; >1100nm, not available [c]			
Maximum Beam Incidence Angle	Without diffuser: ±30 degrees for <12mm Gaussian beam, With diffuser: ±25 degrees for <10mm Gaussian beam [d]			
Backscattered Power	LP2 absorber: <2200nm: 4%; 2940nm: 10%; 10.6µm: 25% With window: 5% With Diffuser: 25%			
Reproducibility	±1%			
Power Range vs. Irradiation Time	200mW - 30W: CW; 500W: up to 20s; 1,000W - 8,000W: 0.05 - 1s.			
Linearity	±1.5%			
Time to Reading	3s after end of exposure			
Waiting Time for Next Measurement	12s			
Maximum Energy for Single Pulse	2.4kJ [e]			
Maximum Exposure Before Cooling Down is Necessary	Maximum operating temperature of 60ºC will be reached after exposure to 14kJ (e.g. 10 shots at 2,000W, 0.7s) [e]. Cooling down time before another 14kJ series of shots is ~10 minutes [f].			
Over Temperature Warning	Flashing display			
Cooling	Convection [f]			
Battery	Rechargeable, 1100mAh, lifetime >15 hours			
Interface	128x64 pixel LCD Display, Bluetooth 5.1 (compatible with Bluetooth 4 and above), USB-C			
Dimensions (L x W x H)	70 x 70 x 80 mm (see drawing)			
Weight	0.8kg			
Operating Temperature	10 - 40ºC			
Permissible Relative Humidity (non-condensing)	10 - 80%			
Ingress Protection	IP62			
Compatible Client Applications	StarLab (PC, USB), StarViewer (Android, Bluetooth)			
Recommended Exposure Times and 1/e² Gaussian Beam Diameters	Laser Power W	Recommended Exposure s	Min 1/e² beam dia. mm	Min 1/e² beam dia. mm diffuser (max dia. is 10mm) mm
Continuous Power Measurement	30	Continuous [f]	1	0.3
	500	20 [f]	4	2
Power Measurement from Short Exposure	500	2	4	1
	1000	1	6	1
	2000	0.7	10	1.5
	4000	0.5	16	3.5
	8000	0.3	22	N.A.
Compliance	CE, UKCA, China RoHS			
Version				
Part number	**7Z02798**			

Notes: (a) The power is calculated by measuring the pulse energy and exposure time. A rectangular pulse is assumed for this calculation.
(b) May be used at 550 - 900nm with decreased accuracy and higher reflection (up to 10%).
(c) Use without window or diffuser. The sensor does not measure pulse width above 1100nm. For pulsed power measurement at >1100nm, a short pulse with known duration should be applied. A pulse energy measurement is performed and divided by the known pulse width to obtain the power. When working without window and without diffuser, the sensor is not sealed against dust or water.
(d) With diffuser, reading will be up to 10% lower than vertical beam and beam should be offset from center in opposite direction to beam incidence by ~10mm.
(e) At room temperature.
(f) Faster cooling can be achieved by attaching the Ariel to a heat sink using the mounting threads at the bottom.

1.1.2.11.3 Pulsed Power Mode

300mW to 10,000W

L40(250)A-LP2-50

L40(500)A-LP2-DIF-35

L30C-LP2-26-SH

Features

- No water cooling
- Measure up to 10kW
- Cost Effective
- Diffuser for concentrated beams

If the full features of the Helios Plus or Ariel including protective cover, Profinet interface and pulse width measurement are not needed, similar performance can be obtained with the L40(250)A-LP2-50 and L40(500)A-LP2-DIF-35. The L40(250)A-LP2-50 has the same sensor as the Helios Plus. It can measure powers from short exposure from 500W up to 10,000W. The user measures the energy of the pulse and knowing the pulse width calculates the power (e.g. 5000J in a 0.5s pulse = 10,000W). If using the Centauri and StarBright meters or Juno/Juno+/ Juno-RS PC interfaces this can be calculated directly by inputting the laser pulse width into the Pulsed Power screen of the Meter/Interface or the equivalent StarLab screen and exposing the sensor to the power for the requisite pulse width. The meter will then directly give the power reading from the pulse energy measured. For lower powers, the L30C-LP2-26-SH will give similar performance for energies up to 2000J. For further information see pages 57 & 121.

Model	L40(250)A-LP2-50			L40(500)A-LP2-DIF-35			L30C-LP2-26-SH

Weight kg	0.6			0.6			0.3		
Operating Temperature	15-60ºC			15-60ºC			15-60ºC		
Connections	DB15 Smart Plug			DB15 Smart Plug			DB15 Smart Plug		
Compliance	CE, UKCA, China RoHS			CE, UKCA, China RoHS			CE, UKCA, China RoHS		
Part Number	**7Z02794** (see page 57)			**7Z02797** (see page 57)			**7Z02775** (see page 121)		

Notes: (a) Above 1100nm there is an additional 1% uncertainty
(b) Repetitive pulses can also be measured as long as the total exposure time is within this range
(c) The power is calculated by measuring the energy and exposure time. The laser pulse is assumed to be rectangular for this calculation
(d) For pulse widths in the range 0.3 – 4s
(e) Calibrated for 900 – 1100nm
(f) At large angles of incidence, the position the beam hits the absorber should be offset into the direction of incidence by 5-10mm for correct reading and at 20deg incidence the reading will be 5% lower and at 30deg incidence 10% lower

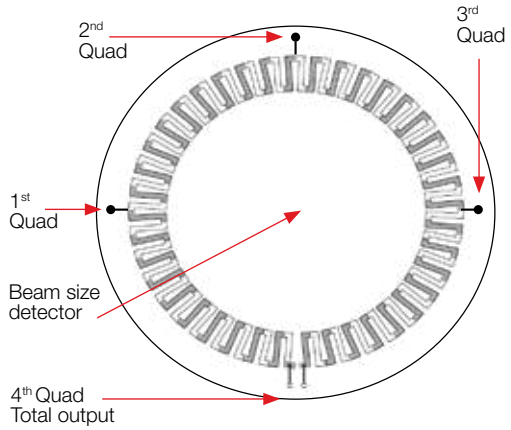
1.1.3 BeamTrack Power / Position / Size Sensors

1.1.3.1 Introduction

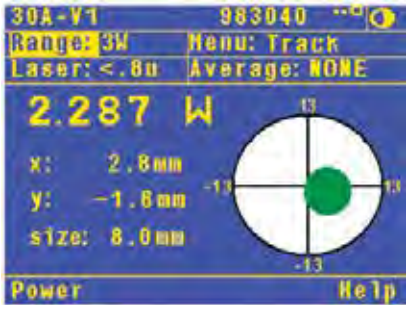
Ophir offers the BeamTrack line of thermal sensors that can measure beam position and beam size while measuring power. This innovative device will provide an additional wealth of information on your laser beam – centering, beam position, beam wander, beam size as well as power and single shot energy. The BeamTrack sensor is illustrated schematically here and works as follows: the signal coming from the sensor is divided into 4 quadrants so by measuring and comparing the output from the 4 sections we can determine the position of the center of the beam to a high degree of accuracy. In addition to the 4 quadrants, there is now a special patented beam size detector. After processing outputs from these various detectors, the user is presented with the beam position as well as beam size. Note that the beam size is calibrated only for Gaussian beams but for other beams it will give relative size information and will indicate if the beam is changing size.



Operation of BeamTrack Sensors

BeamTrack sensors look similar to Ophir thermal sensors of the same type except that there is a small electronics module on the cable from the sensor to the smart plug. When BeamTrack sensors are plugged into compatible displays or PC interfaces (Centauri, StarBright, StarLite, Nova II, Vega, Juno, Juno+, Juno-RS and EA-1), along with the power measurement, there is a visual display of the beam position and beam size. The beam position can be accurately tracked and logged for beam wander measurements.

The beam size is calibrated only for Gaussian beams but other beams may be measured and the sensor will give a repeatable measurement of the relative beam size for tracking changes in the size of the beam over time.



Model	Sensor Type	Max Power [W]	Position	Size
3A-QUAD	TH	3	√	
3A-P-QUAD	TH	3	√	
10A-PPS	TH	10	√	√

1000W-BB-34-QUAD	TH	1000	√	

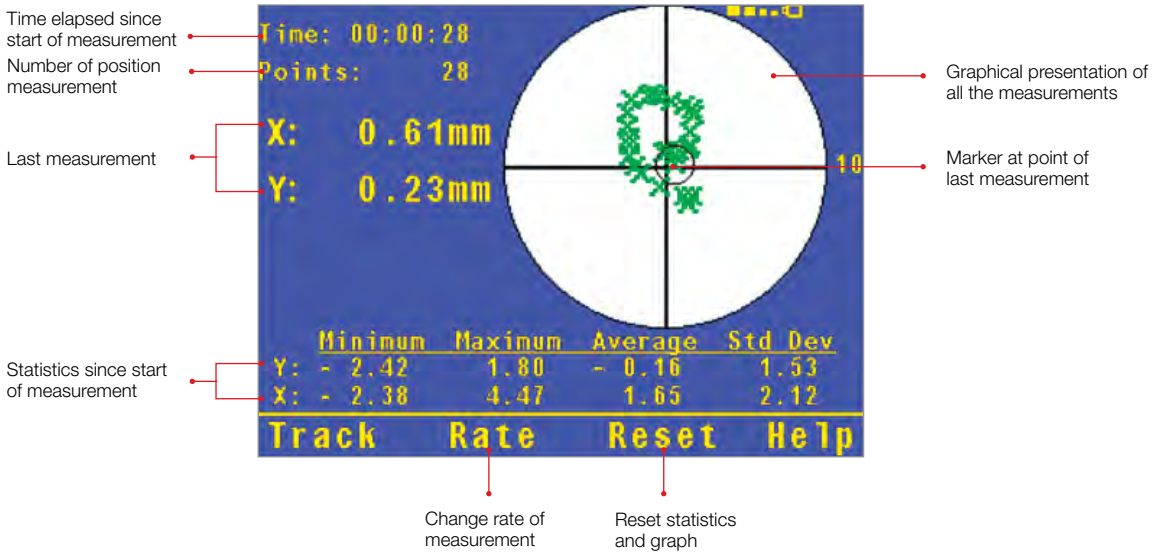
PD = Photodiode, TH = Thermal

1.1.3.2 BeamTrack Device Software Support

- BeamTrack sensors are fully supported by the Centauri, StarBright, StarLite, Vega, Nova II, Juno, Juno+, Juno-RS and EA-1 devices
- Attach the sensor to the meter. On startup, it will be recognized as a BeamTrack sensor and tracking options will be enabled
- Use the Track screen to measure power, position and size simultaneously
- Use the Stability screen to measure pointing stability (also known as beam wander) over time

Track Screen of Centauri

Pointing Stability Screen of Vega



- StarLab
- COM Object for System Integrators including demo applications in VB, VC+ and MatLab the Track screen to measure power, position and size simultaneously
- LabVIEW Demo Application

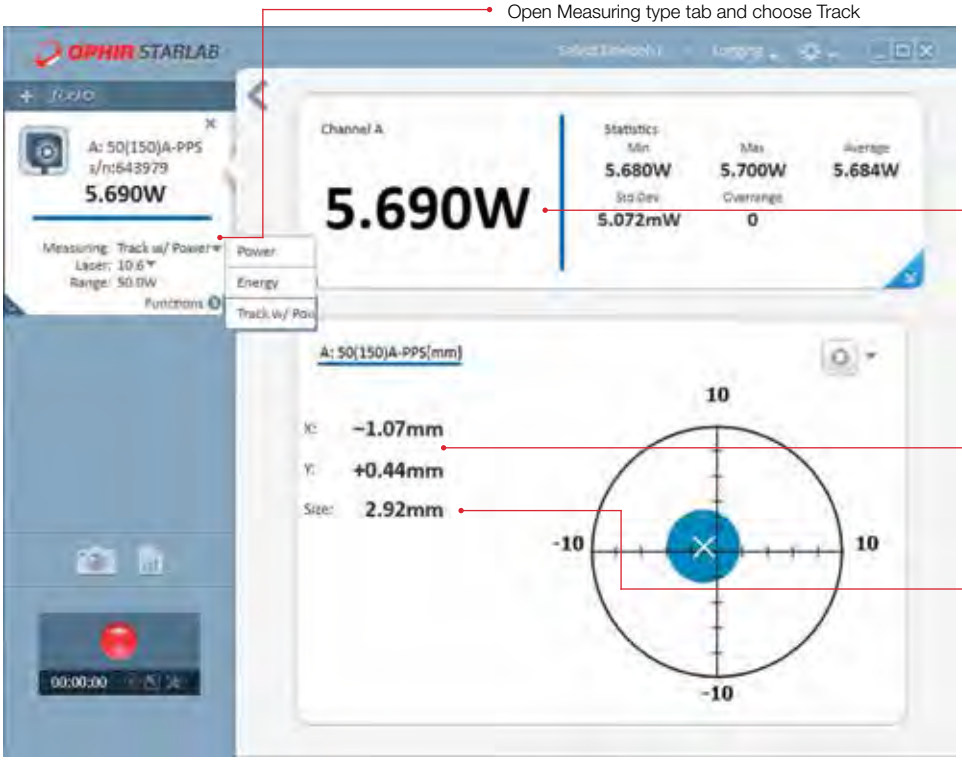
Position & Size Screen



Power / Position / Size screen

1.1.3.4 Low Power BeamTrack-Power / Position / Size Sensors

100µW to 10W

Features

- All the features of standard power sensors plus...
- Accurate tracking of beam position to fractions of a mm
- Monitoring of the laser beam size

3A-QUAD / 3A-P-QUAD

10A-PPS

Model	3A-QUAD [a]	3A-P-QUAD [a]	10A-PPS [a]
Use	**General purpose**	**Short pulses**	**Low power**
Functions	Power / Energy / Position	Power / Energy / Position	Power / Energy / Position / Size
Absorber Type	Low power broadband	P type	Broadband
Spectral Range µm	0.19 - 20	0.15 - 8	0.19 - 20
Aperture mm	Ø9.5mm	Ø12mm	Ø16mm
Power Mode			
Power Range	100µW - 3W	160µW - 3W	20mW - 10W
Power Scales	3W to 300µW	3W to 300µW	10W / 5W / 0.5W
Power Noise Level	5µW	10µW	1mW
Thermal Drift (30min)%	10 - 40µW [b]	10 - 40 µW [b]	NA
Maximum Average Power Density kW/cm²	1	0.05	28
Response Time with Meter (0-95%) typ. s	1.8	2.5	0.8

Beam Tracking Mode			
Position			
Beam Position Accuracy mm [c]	0.15	0.15	0.15
Beam Position Resolution mm	0.02	0.02	0.02
Min Power for Position Measurement	300µW	400µW	50mW
Size [d]			
Size Accuracy [e]	NA	NA	±(5%+50µm) for centered beam
Size Range mm (4σ beam diameter)	NA	NA	1.5 - 10
Min Power for Size Measurement	NA	NA	50mW
Cooling	Convection	Convection	Convection
Weight kg	0.3	0.3	0.3
Fiber Adapter Available (see page 93)	ST, FC, SMA, SC	ST, FC, SMA, SC	ST, FC, SMA, SC
Compliance	CE, UKCA, China RoHS	CE, UKCA, China RoHS	CE, UKCA, China RoHS
Part number	**7Z07934**	**7Z07935**	**7Z07904**

Notes: (a) The BeamTrack features are supported by Centauri, StarBright, StarLite, Nova II and Vega meters, Juno, Juno+, Juno-RS and EA-1 interfaces and StarLab application. Position and Size measurements work only in Power mode (but not in single shot Energy mode).

Notes: (b) Depending on room airflow and temperature variations.

Notes: (c) For position within inner 30% of aperture. Position measuring center corresponds to geometrical center within <1mm. Position center can be software reset to geometric center or other desired position with Centauri, StarBright or StarLab.

Notes: (d) Assumes laser beam with circular Gaussian (TEM_{00}) distribution. For other modes, size measurement is relative.

Notes: (e) Accuracy spec will be maintained for beams ≥1.8 mm not deviating from center by more than 15% of beam diameter.

Notes: (f) For P type and shorter wavelengths derate maximum energy density as follows:

Wavelength	Derate to value
1064nm	not derated
532nm	not derated
355nm	40% of stated value
266nm	10% of stated value
193nm	10% of stated value

Notes: (g) The 3A-QUAD has a relatively large spectral variation in absorption and has a calibrated spectral curve at all wavelengths in its spectral range to the above specified accuracy. Nova, Orion and LaserStar meters do not support this feature and when used with those meters, the accuracy will be ±3% as above for 532nm, 905nm, 1064nm and 10.6µm but there will be an additional error of up to 3% at other wavelengths in the spectral range 190 – 3000nm.

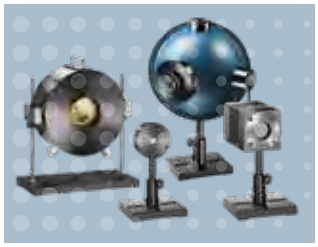
2022 ENERGY SENSORS 1.2

SENSORS

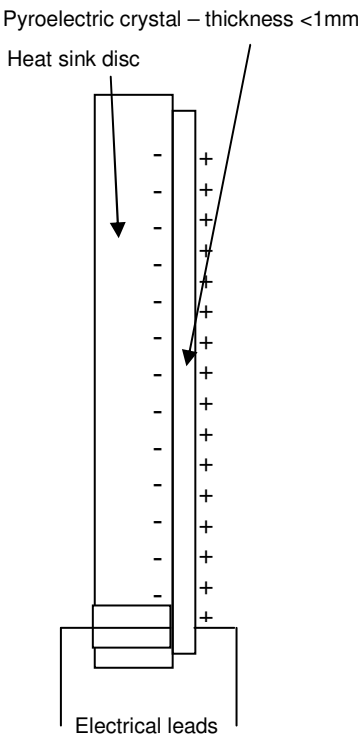


Introduction

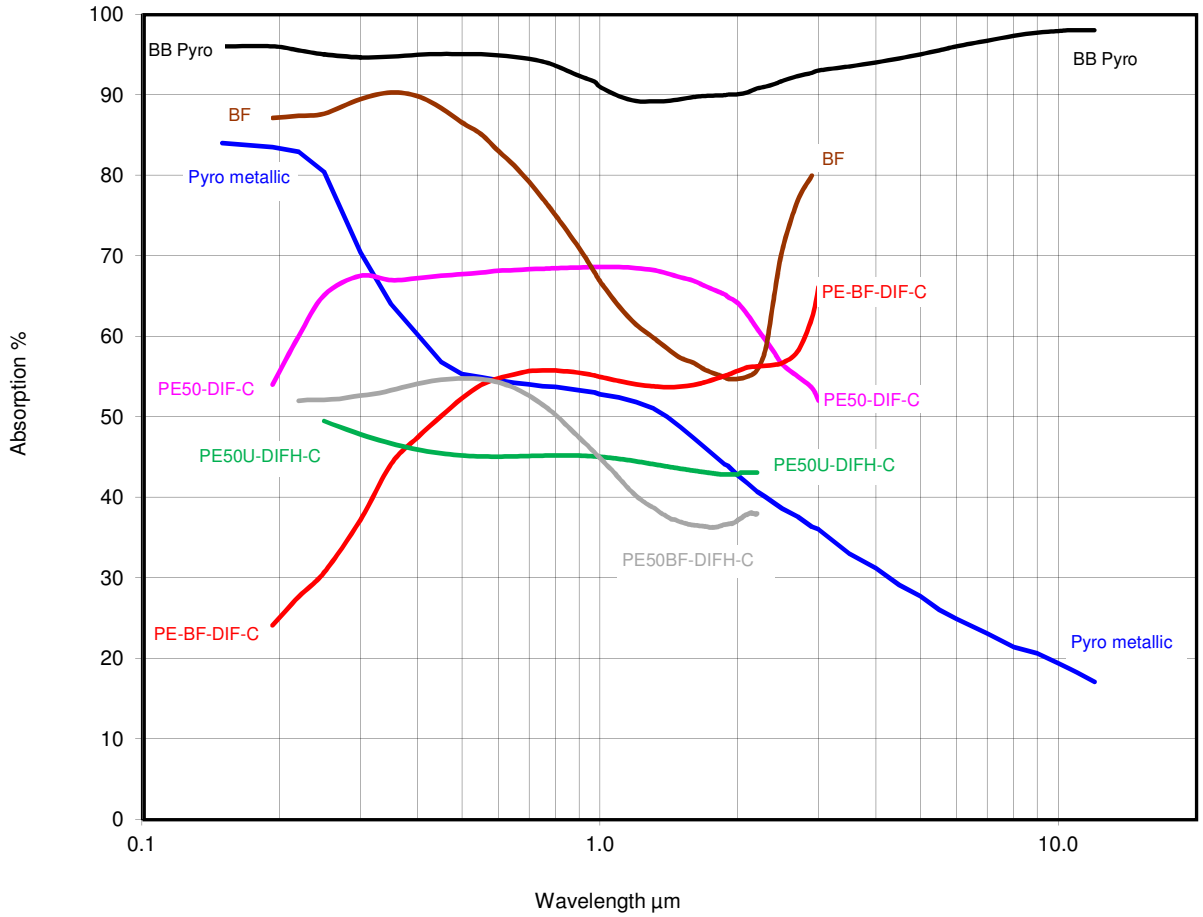
Pyroelectric sensors are for measuring repetitive pulse energies and average powers at pulse rates up to 25000 pulses per second and pulse widths up to 20ms. Note that single shot energy with pulse rates less than one pulse every 5s or so can be measured with thermal sensors described in the power sensor section.

Pyroelectric Sensors

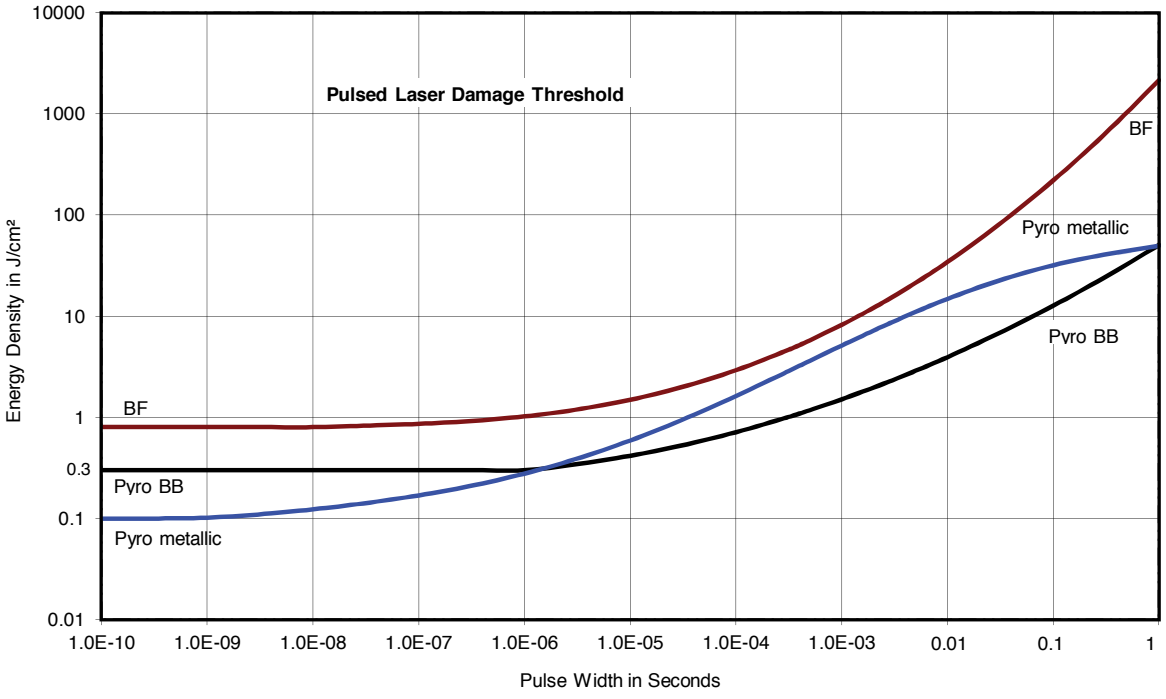
Pyroelectric type sensors are useful for measuring the energy of repetitively pulsed lasers at up to 25,000Hz and are sensitive to low energies.
They are less durable than thermal types and therefore should not be used whenever it is not necessary to measure the energy of each pulse and average power measurement is sufficient.
Pyroelectric sensors use a pyroelectric crystal that generates an electric charge proportional to the heat absorbed. Since the two surfaces of the crystal are metalized, the total charge generated is collected and therefore the response is not dependent on beam size or position. This charge then charges a capacitor in parallel with the crystal and the voltage difference thus generated is proportional to the pulse energy. After the energy is read by the electronic circuit, the charge on the crystal is discharged to be ready for the next pulse. The response time of the pyroelectric sensor depends on the time it takes for the heat to enter the crystal and heat it up. For metallic type pyro detectors, this time is tens of µs and thus the metallic type can run at a high repetition rate. For the BF and BB types, the response time is hundreds of µs with a correspondingly lower repetition rate.
Ophir pyroelectric detectors have unique and proprietary circuitry that allow them to measure long pulses as well as short pulses and work at a high duty cycle, i.e. where the pulse width is as much as 30% of the total cycle time.
Ophir came out with the compact C line of pyroelectric sensors that replaced previous models. The electronics and mechanics have been completely upgraded and the current sensors are superior in every way: more compact, wider dynamic range, have higher repetition rates and measure longer pulses. Through constant development, Ophir again brings you the best performance in the market.
Note: Older line of Pyroelectric sensors is not supported by the Centauri, StarBright and StarLite meters, and Juno+, Juno-RS and EA-1 interfaces.
All Ophir power and energy sensors come with a mounting stand.



Absorption vs. Wavelength

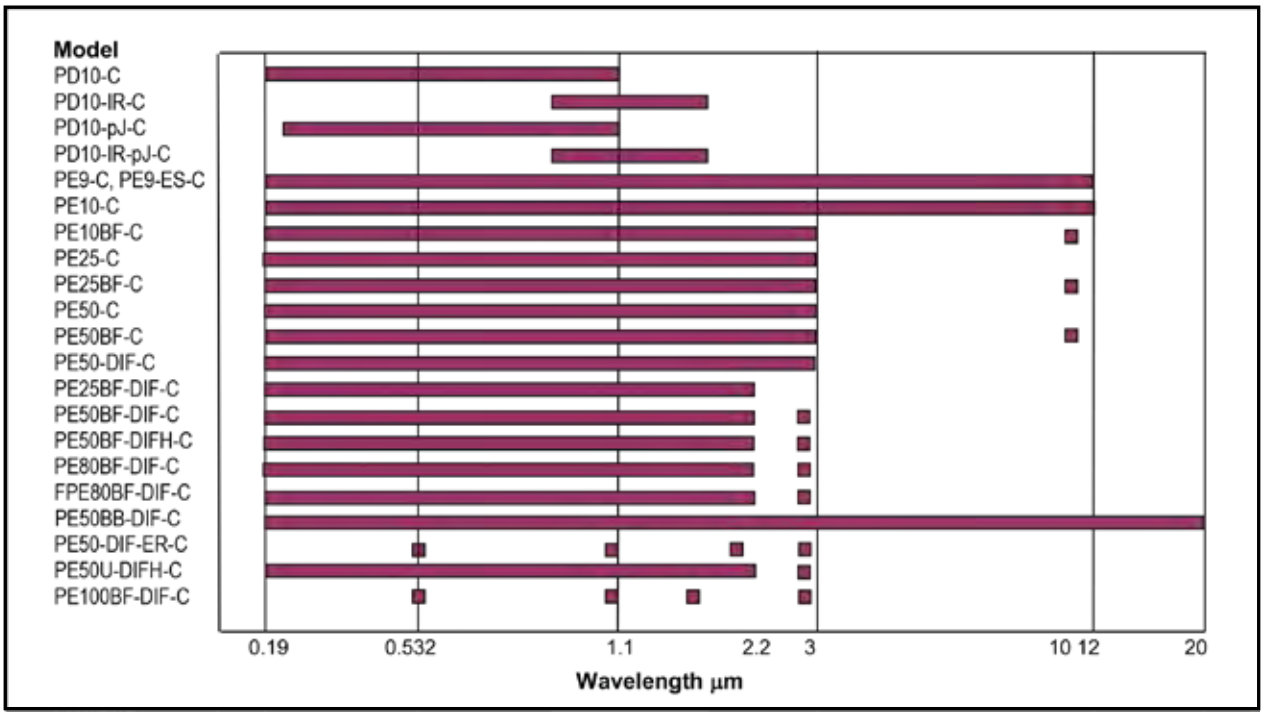


Damage Threshold vs. Pulse Width

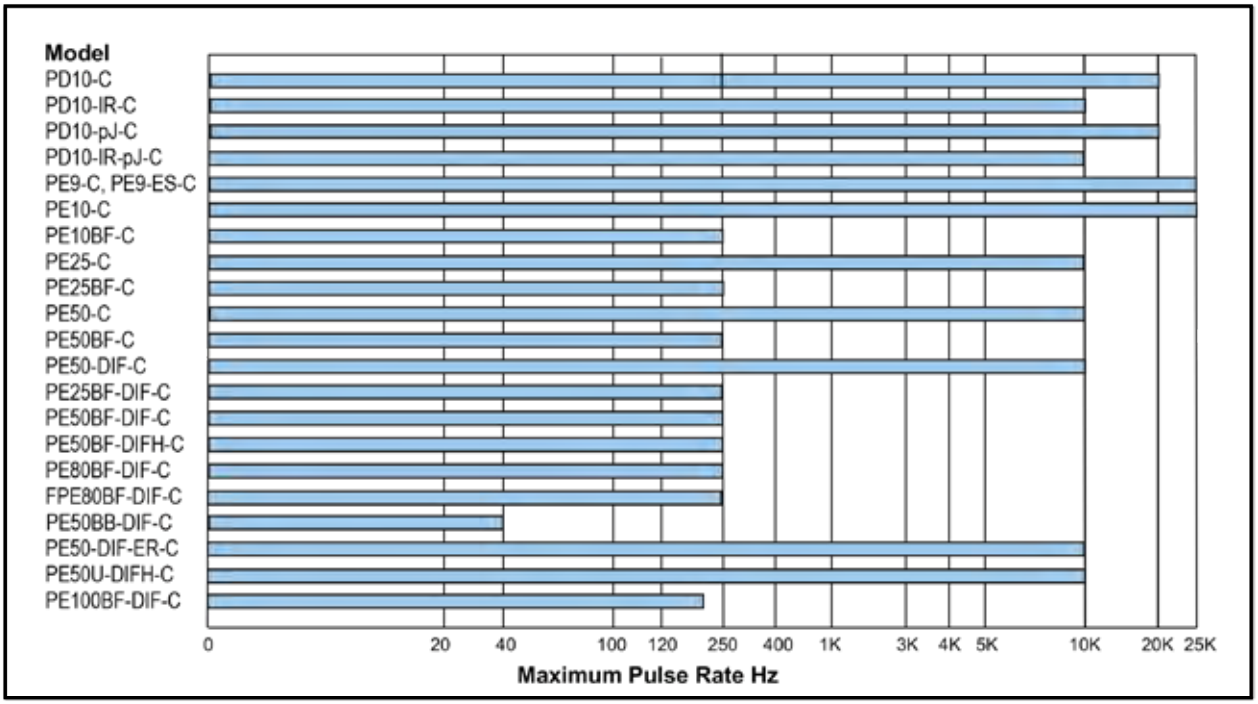


Wavelength Range and Repetition Rate for Energy Sensors

Wavelength Range



Repetition Rate Range



10pJ to 15µJ

Features

- Silicon and Germanium detectors
- Very sensitive - down to 10pJ
- Repetition rates to 20kHz
- Wide spectral range

PD10-C / PD10-IR-C / PD10-pJ-C / PD10-IR-pJ-C

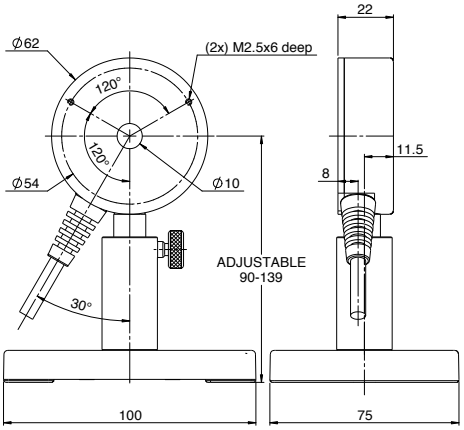
Version				
Part number	**7Z02944**	**7Z02955**	**7Z02945**	**7Z02946**
Note: (a) This is basic calibration accuracy. In certain wavelength regions calibration there is additional error as tabulated here.	<250nm add ±3% >950nm add ±2%	<900nm add ±2% >1700nm add ±2%	<250nm add ±2% >950nm add ±2%	<900nm add ±2% >1700nm add ±2%

Note: (b) With the "user threshold" setting set to minimum. For other settings, the spec is for >10% of full scale or greater than twice the "user threshold", whichever is greater. The user threshold is not available with LaserStar, Nova/Orion, Pulsar, USBI and Quasar. For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PD-C series will only operate with Nova or Orion meters with an additional adapter Ophir P/N 7Z08272 (see page 110). The adapter can introduce up to 1% additional measurement error. The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments.
For further information, see the FAQs on our Website.

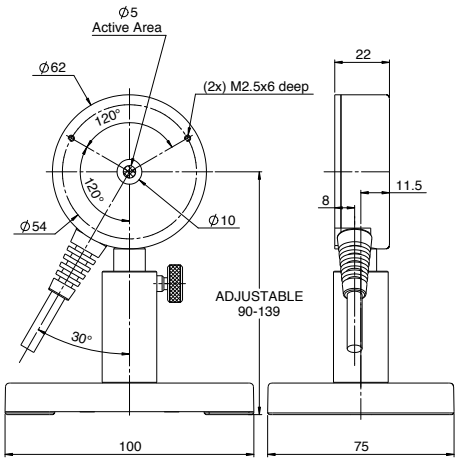
Note: (c) Additional Error with Frequency of ±1% only for energies up to 2µJ. For higher energies ±1% up to 10kHz, -4% at 20kHz.

Note: (d) Additional Error with Frequency of ±1% only for energies up to 20nJ. For higher energies ±2% up to 10kHz, -5% at 20kHz.

PD10-C / PD10-pJ-C



PD10-IR-C / PD10-IR-pJ-C



0.1µJ to 1mJ

Features

- Ø8mm aperture
- Repetition rates up to 20,000Hz
- High sensitivity sensors
- Pulse widths up to 20µs

Maximum Average Power W	2		3	
Maximum Average Power Density W/cm²	50		50	
Fiber Adapters Available (see page 109)	ST, FC, SMA, SC		ST, FC, SMA, SC	
Weight kg	0.25		0.25	
Compliance	CE, UKCA, China RoHS		CE, UKCA, China RoHS	
Version				
Part Number	**7Z02932**		**7Z02938**	
Note: (a) Calibrated curve is checked and adjusted at the following wavelengths (µm)	1.064, 0.355		0.193, 0.248, 0.355, 0.532, 1.064	
For other wavelengths in the curve there is additional calibration error as stated.	240 - 800nm add ±4%, 2-3µm add ±8%, 10.6µm add ±15%. <240nm not calibrated		0.2-3µm ±2%, 10.6µm ±5%	

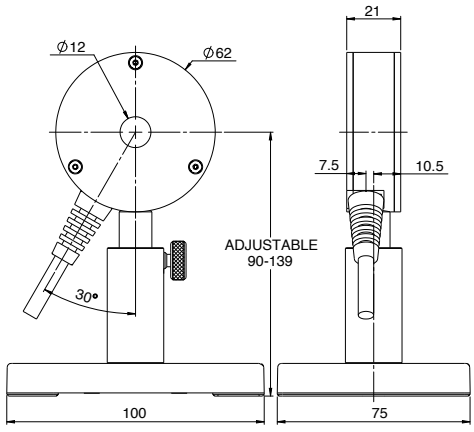
Note: (b) For wavelengths below 600nm, derate damage threshold to 60% of given values. Below 300nm, derate to 40% of given values.

Note: (c) With "user threshold" setting set to minimum. For other settings, the spec is for >7% of full scale or greater than twice the "user threshold", whichever is greater.
The user threshold is not available with LaserStar, Nova/Orion, Pulsar, USBI and Quasar. For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PE-C series will only operate with Nova or Orion meters with an additional adapter Ophir P/N 7Z08272 (see page 110). The adapter can introduce up to 1% additional measurement error.
The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments.
For further information, see the FAQs on our Website.

Note: (d) The absorption at 675nm is approximately the same as at 10.6µm. Therefore, to measure a CO_2 laser, set to the 675nm setting. The additional error for measuring 10.6µm is ±5%.

Note: (e) With the LaserStar, Pulsar, USBI, Quasar and Nova/Orion with adapter, for the PE10-C model the 1µs pulse width setting is displayed as "10µs".

PE10-C / PE10BF-C



8µJ to 10J

Features

- Ø24mm apertures
- Metallic coating for high rep rates
- BF coating for highest damage threshold
- Rep rates up to 10kHz
- Measure lasers with pulse widths up to 20ms

Version										
Part Number	**7Z02937**					**7Z02935**				
Note: (a) Calibration curve is verified and adjusted at specified wavelengths.	Specified wavelengths: 248-266nm, 355nm, 1064nm and 2940nm.					Specified wavelengths: 193nm, 248-266nm, 355nm, 532nm and 1064nm.				
At other wavelengths, there may be an additional error up to the value given.	Max additional error at other wavelengths: ±2%. <240nm not calibrated					Max additional error at 2940nm ±3%. Max additional error at other wavelengths: ±2%.				
Note: (b)						For wavelengths below 600nm, derate damage threshold to 60% of given values. Below 300nm, derate to 40% of given values.				

Note: (c) With the "user threshold" setting set to minimum. For other settings, the spec is for >7% of full scale or greater than twice the "user threshold", whichever is greater.
The user threshold is not available with LaserStar, Nova/Orion, Pulsar, USBI and Quasar. For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PE-C series will only operate with Nova or Orion meters with an additional adapter Ophir P/N 7Z08272 (see page 110). The adapter can introduce up to 1% additional measurement error.
The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments.
For further information, see the FAQs on our Website.

Note: (d) With the LaserStar, Pulsar, USBI, Quasar and Nova/Orion with adapter, only 2 out of 5 pulse widths settings are available; for the PE25-C model the 2µs (displayed as "10µs") and 1ms settings, and for the PE25BF-C model the 1ms and 10ms settings.

Note: (e) If the sensor is set to the 1064nm wavelength, then when measuring 10.6µm pulses, the reading will be approximately 1.19X the correct reading. If you use the attenuate function and set the attenuation to read 0.84, then you will have the correct reading at 10.6µm. The additional error at 10.6µm is ±5%.

* For drawings please see page 106

10µJ to 10J

Features

- Ø46mm apertures
- Metallic coating for high rep rates
- BF coating for highest damage threshold
- Rep rates up to 10kHz
- Measure lasers with pulse widths up to 20ms

The user threshold is not available with LaserStar, Nova/Orion, Pulsar, USBI and Quasar. For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PE-C series will only operate with Nova or Orion meters with an additional adapter Ophir P/N 7Z08272 (see page 110). The adapter can introduce up to 1% additional measurement error.
The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments.
For further information, see the FAQs on our Website.

Note: (d) With the LaserStar, Pulsar, USBI, Quasar and Nova/Orion with adapter, only 2 out of 5 pulse widths settings are available; for the PE50-C model the 2µs (displayed as "10µs") and 1ms settings, and for the PE50BF-C model the 1ms and 10ms settings.

Note: (e) If the sensor is set to the 1064nm wavelength, then when measuring 10.6µm pulses, the reading will be approximately 1.19X the correct reading. If you use the attenuate function and set the attenuation to read 0.84, then you will have the correct reading at 10.6µm. The additional error at 10.6µm is ±5%.

* For drawings please see page 106

20µJ to 10J

Features

- Sensors with diffuser for high energies and high energy densities
- Metallic coating for high repetition rates up to 10kHz
- High damage threshold
- Wide spectral range. Measure YAG and harmonics, 193nm, 248nm and many more
- Measure lasers with pulse widths up to 20ms

Notes: (a) Calibration accuracy at various wavelengths as specified here.	Specified wavelengths: 355nm, 532nm, 1064nm and 2100nm.			Specified wavelengths: 193nm, 248-266nm, 355nm, 532nm, 1064nm, 2100nm and 2940nm.		Calibrated at 1064nm			Calibrated at 1064nm, 532nm and 2100nm only. Calibration accuracy at 2100nm, ±5%.		
At other wavelengths, there may be an additional error up to the value given.	Max additional error at other wavelengths not specified above: ±2%. <250nm not calibrated			Max additional error at 193nm ±4%. Max additional error at other wavelengths not specified above: ±2%.		Max additional error at other wavelengths is ±2%					
Notes: (b)	For wavelengths >2.1µm, derate to 10% of above values. For wavelengths below 600nm, derate to 60% of given values (for DIFH 50% of given values). For wavelengths below 240nm, derate to 1J/cm². For beam size ≤5mm. For 10mm beam, derate DIF to 80% and DIFH to 70% of above.										

Notes: (c) With the "user threshold" setting set to minimum. For other settings, the spec is for >7% of full scale or greater than twice the "user threshold", whichever is greater.
The user threshold is not available with LaserStar, Nova/Orion, Pulsar, USBI and Quasar. For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PE-C series will only operate with Nova or Orion meters with an additional adapter Ophir P/N 7Z08272 (see page 110). The adapter can introduce up to 1% additional measurement error.
The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments.
For further information, see the FAQs on our Website.

Notes: (d) With the LaserStar, Pulsar, USBI, Quasar and Nova/Orion with adapter only 2 of the pulse width settings are available. For the PE-BF models the 1ms and 10ms settings and for the PE-BB model the 3ms and 10ms settings. Furthermore, with the diffuser mounted, the sensor may saturate at lower than the maximum energy in some cases. Therefore it is recommended to use these sensors with the newer meters/PC interfaces.

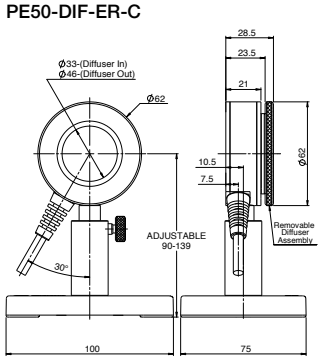
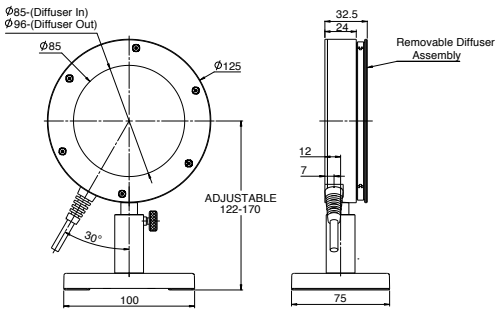
Notes: (b) With the "user threshold" setting set to minimum. For other settings, the spec is for >10% of full scale or greater than twice the "user threshold", whichever is greater.
For use with Centauri, StarBright, StarLite, Nova II, Vega, Juno, Juno+, Juno-RS and EA-1. The sensors will operate with older Ophir meters and PC interfaces but do not support the threshold function and may give inaccurate readings with the diffuser in and therefore it is not recommended to use these sensors with older Ophir meters and PC interfaces. The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments. For further information, see the FAQs on our Website.

Notes: (c) With the LaserStar, Pulsar, USBI, Quasar and Nova/Orion with adapter only 2 of the 5 pulse width settings are available. For the PE50-DIF-ER-C, the 30µs and 1ms settings and for the PE100BF-DIF-C, the 1ms and 10ms settings. Furthermore, with the diffuser mounted, the sensor may saturate at lower than the maximum energy in some cases. Therefore it is recommended to use these sensors with the newer meters/PC interfaces.

PE50-DIF-ER-C



PE100BF-DIF-C



1.2.3 High Energy Pyroelectric Sensors

1mJ to 40J

Features

- Fan or conduction cooled for high average power capability
- BF coating with diffuser for highest damage threshold
- Wide spectral range. Measure YAG and harmonics and many more
- Rep rates up to 250Hz
- Measure lasers with pulse widths up to 20ms

Version										
Part Number	**7Z02950**					**7Z02954**				
Notes: (a) Calibration accuracy at various wavelengths as specified here. At other wavelengths, there may be an additional error up to the value given.	Specified wavelengths: 355nm, 532nm, 1064nm, 2100nm and 2940nm. Max additional error at other wavelengths not specified above: ±2%. <250nm not calibrated.									
Notes: (b)	For wavelengths >2.1µm, derate to 10% of above values. For wavelengths below 600nm, derate to 60% of given values. For wavelengths below 240nm, derate to 1J/cm². For beam size ≤16mm. For 32mm beam, derate to 50% of above values.									

Notes: (c) With the "user threshold" setting set to minimum. For other settings, the spec is for >10% of full scale or greater than twice the "user threshold", whichever is greater. The user threshold is not available with LaserStar, Nova/Orion, Pulsar, USBI and Quasar. For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PE-C series will only operate with Nova or Orion meters with an additional adapter Ophir P/N 7Z08272 (see page 110). The adapter can introduce up to 1% additional measurement error. The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments.
For further information, see the FAQs on our Website.

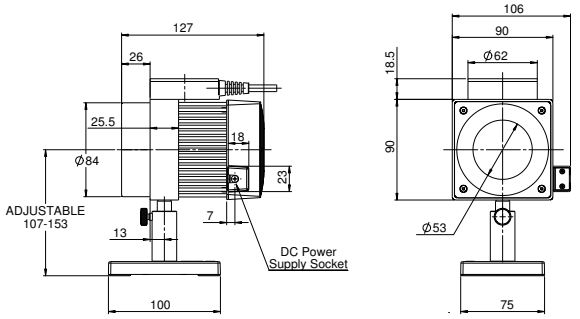
Notes: (d) With the LaserStar, Pulsar, USBI, Quasar and Nova/Orion with adapter only 2 of the pulse width settings are available, the 1ms and 10ms settings.

Notes: (e) For maximum power. For lower powers the damage threshold is correspondingly higher.

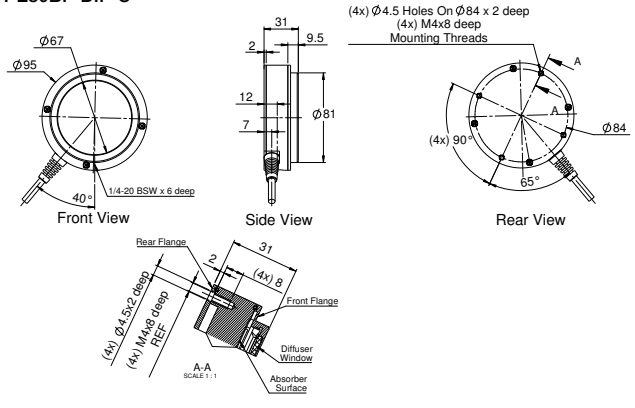
Notes: (f) For powers below 50W it is recommended to work with the fan off. If working with the fan on, the threshold must be set to 6% and the lowest measurable energies will be as follows:

Max Pulse Width Setting	1ms	2ms	5ms	10ms	20ms
Lowest Measurable Energy mJ	4mJ	4mJ	4mJ	4mJ	4mJ

FPE80BF-DIF-C



PE80BF-DIF-C

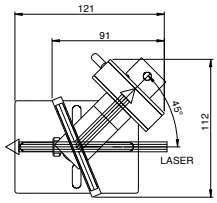


Fiberoptic Adapter for Pyroelectric Sensors

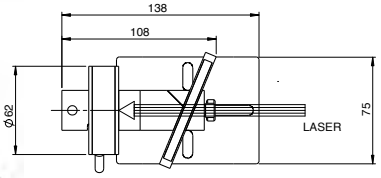
Oscilloscope Adapter for Pyroelectric Sensors

Heat Sink for PE-C Series Sensors

Beam Splitter Assembly



Beam splitter installed – reflected beam on sensor

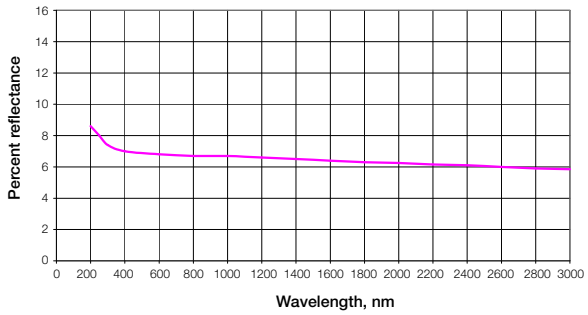


Beam Splitter removed – direct beam on sensor

Beam Splitter Specifications

Material	UV grade fused silica	
Spectral range	0.19 - 2.2µm	
Aperture	Ø60mm	
Damage threshold for pulses	< 10ns PW 5J/cm²	>300µs PW >200J/cm²
Fraction split off	See graph	

F.S. Beam Splitter, 2 sided reflection unpolarized light



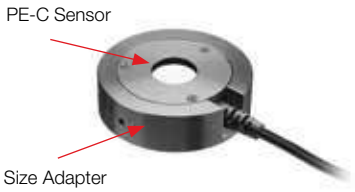
Accessory	Description	Part number			
Heat Sink	Heat sink that screws onto rear of PE25 and PE50 series sensors and allows working at over 50% higher average powers.	7Z08267			
Scope Adapter	Plugs in between the PE sensor and power meter. Provides BNC output to scope to see every pulse up to the maximum frequency of the sensor.	7Z11012			
Fiber Adapters	To mount fibers to sensors you need an adapter bracket and fiber adapter. All fiber adapters are compatible with the adapter bracket selected.				
Fiber Adapter Brackets	Mounting brackets to allow mounting fiber adapters to pyroelectric sensors.				
PE Sensor Family Type		Bracket P/N		Distance from fiber to detector	
PD10-C / PD10-IR-C / PD10-pJ-C / PD10-IR-pJ-C		7Z08275		10mm	
PE50-C / PE50BF-C		7Z08270		15mm	
PE9-C / PE9-ES-C / PE10-C / PE10BF-C / PE25-C / PE25BF-C		7Z08269		10mm	
Fiber Adapters	Fiber adapters for mounting to above brackets	SC type	ST type	FC type	SMA type
For all PE sensors above		7Z08227	7Z08226	7Z08229	1G01236A
Beam Splitter Assembly	Beam Splitter Assembly to measure pulsed laser sources too energetic for direct measurement. The reading with the Beam Splitter can be calibrated by setting the laser to a lower energy that will not damage the sensor and then taking a measurement with the beam splitter and without and taking the ratio.	7Z17001			

1.2.4.1 Accessories for Pyroelectric Sensors - Continued

Damage Threshold Test Plates

Nova PE-C Adapter

PE-C to PE Size Adapter



Negative Polarity Power Supply/Charger

Accessory	Description	Part number			
Damage Threshold Test Plates	Test plates with same absorber coating as the sensor. For testing that laser beam is not above damage threshold	Metallic type	BF type	THz type	BB type

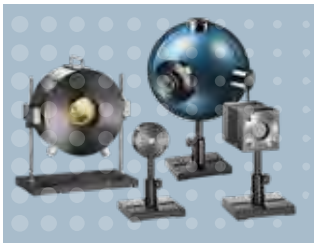
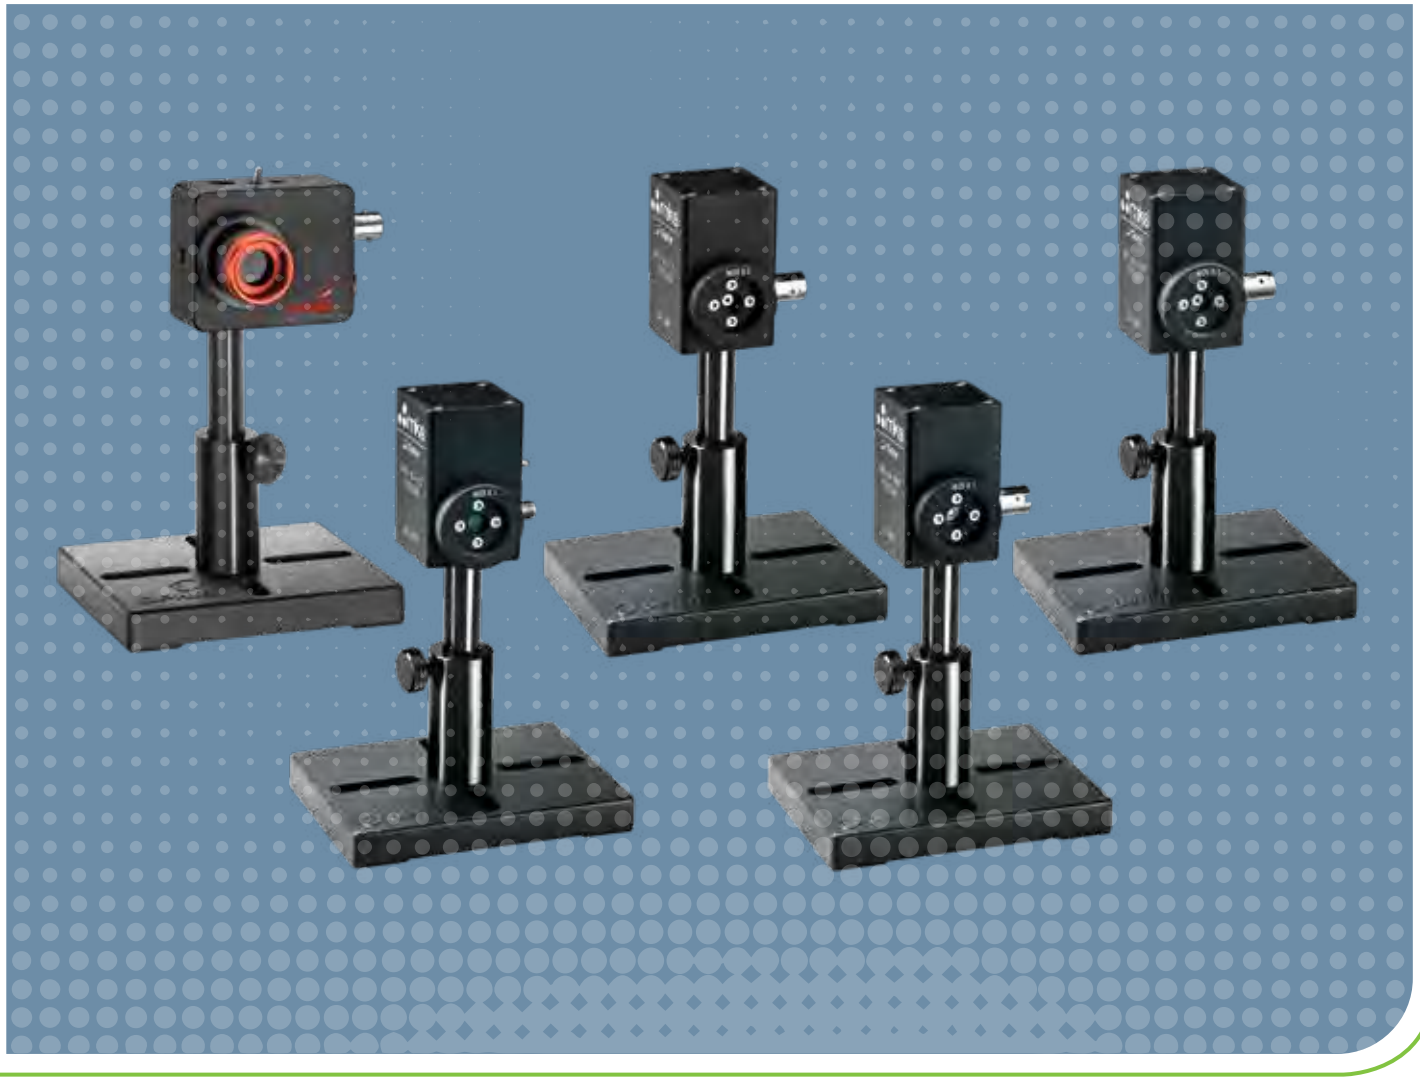
2022 PULSE CHARACTERIZATION SENSORS 1.3

SENSORS





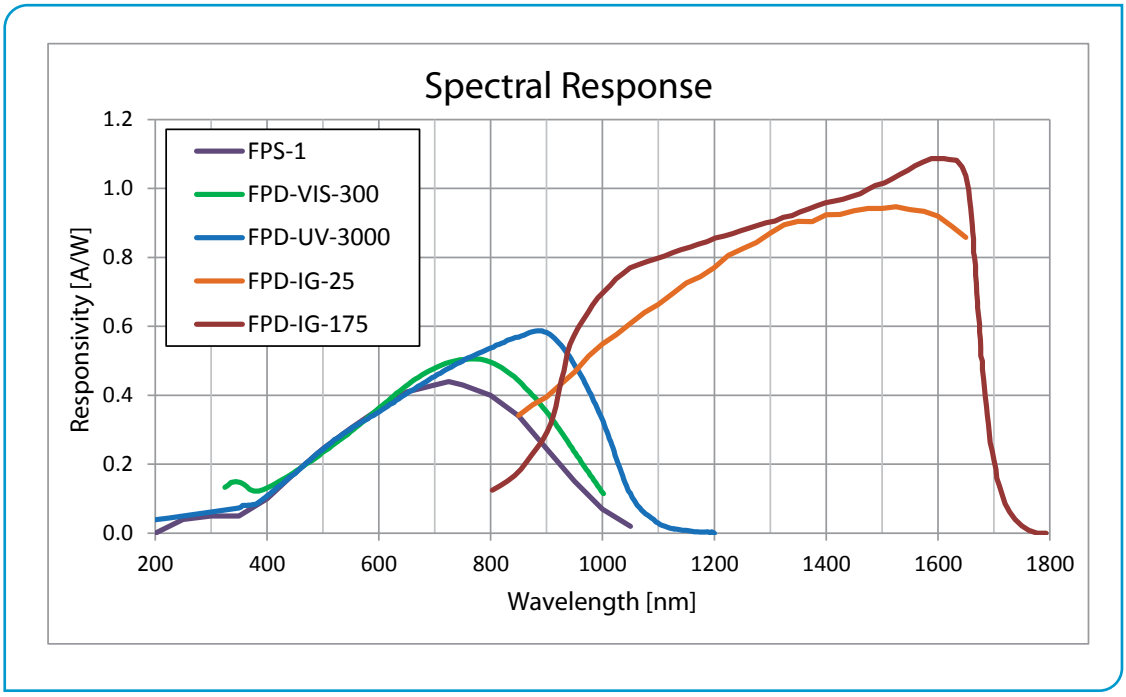
Introduction

Ophir's high speed, biased PIN **Fast Photodiode Detectors (FPD series)** convert fast optical pulses into electrical signals. When terminated into 50Ω into an oscilloscope or spectrum analyzer, the temporal characteristics of lasers pulses can be viewed and measured. A selection of models covers the spectrum from 190nm to 1700nm and a range of rise times and sensitivities. The photodiode bias voltage is supplied by internal batteries and/or external power supply depending on the model. Ophir's Pulse Characterization Sensors do not require calibration.

In order to achieve minimal response times, the photodiodes used in these detectors are relatively small. This reduces their capacitance and increases their electrical bandwidth. This makes them ideal for sampling a portion of the laser beam by placing them directly in the beam path or by picking up reflections bouncing off a nearby target.

When it is important to capture the entire beam, the temporal sensor can be attached to an integrating sphere. The laser beam enters the integrating sphere, and the temporal detector attached at the side will sample a small portion of the laser beam's energy which is scattered inside the sphere.
When additional amplification of the detected signal is needed, for example, in order to feed the detected signal into a digital acquisition system, a trans-impedance amplifier should be used. For best performance a trans-impedance amplifier with 50Ω input resistance and bandwidth equal to or larger than that of the sensor should be used.

Accessories available include attenuators, fiber optic adapters and adapters for attaching to integrating spheres.



Related Product

For an FPD detector built into an integrating sphere sensor, see our **IS1.5-VIS-FPD-800, 1.5" High Speed Response, Multi-functional Integrating Sphere** on page 35.

IS1.5-VIS-FPD-800
(see p. 35)

Features

- Fast response time down to 25 psec
- Measure temporal pulse shape
- Spectral coverage from 193 to 1700 nm
- Optional attenuators, fiber optic adapters and integrating sphere adapters available

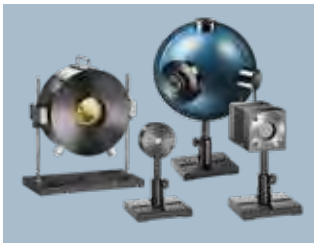
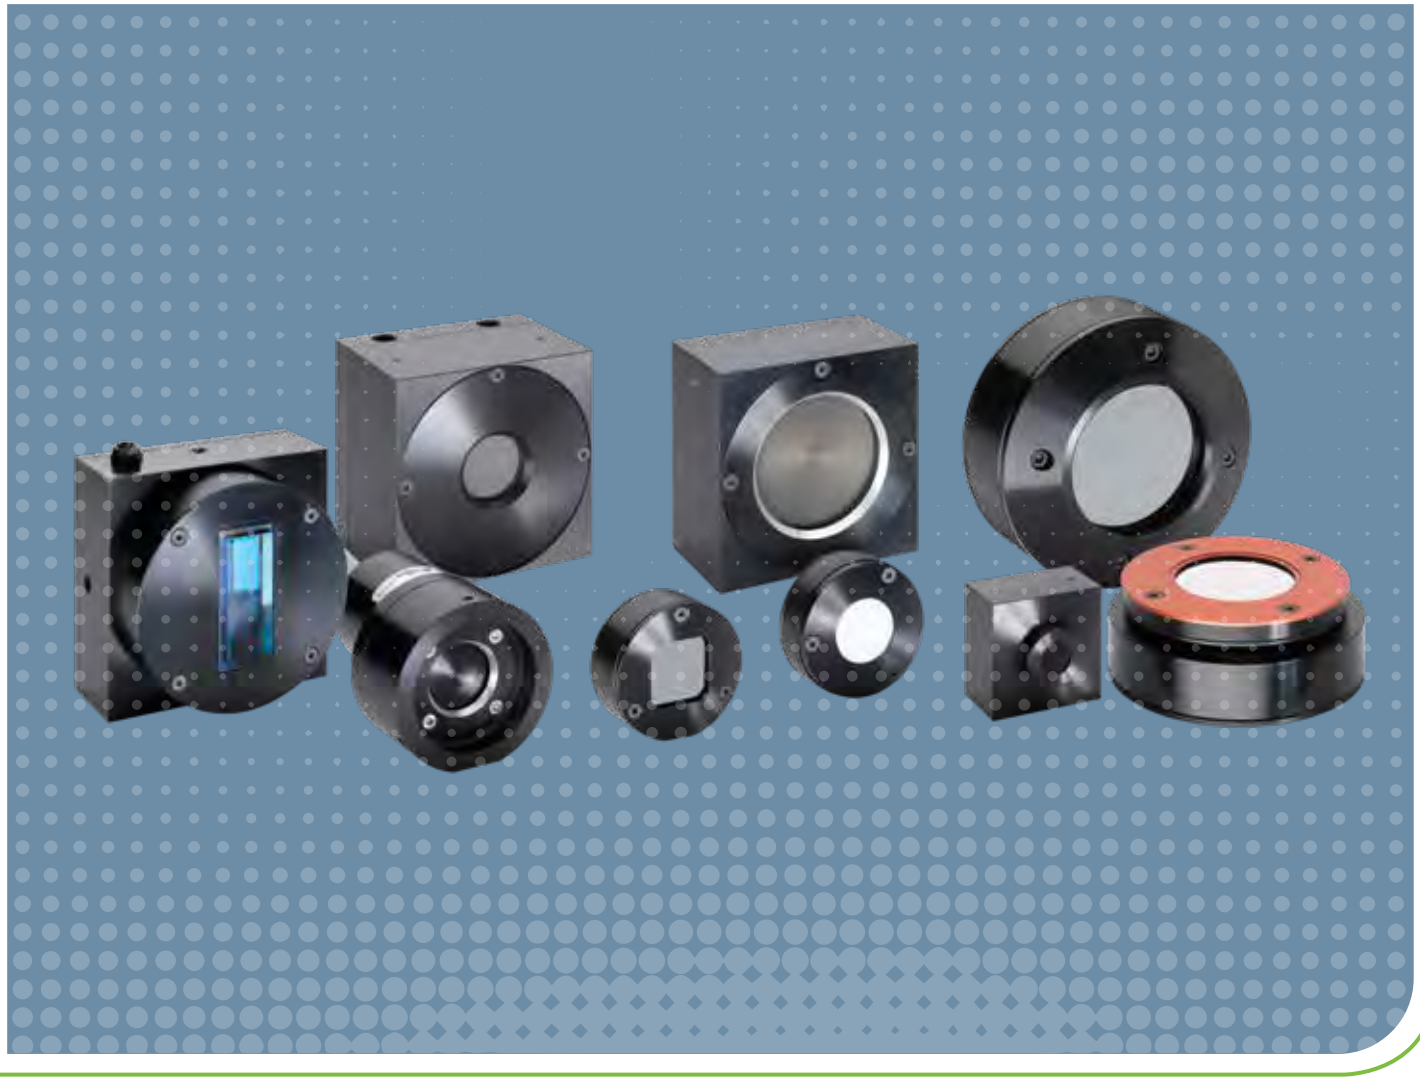
2022 CUSTOMIZED SOLUTIONS (OEM) 1.4

SENSORS





Ophir – The World Leading Source for Custom Designed Laser Measurement Solutions

Many laser systems manufacturers need to have a measuring capability built into their systems.
Ophir is the world's leading supplier of Customized Solutions (OEM) laser power/energy measurement instrumentation which can be built into host systems (such as medical, industrial, etc.). With extensive experience accumulated in the field, Ophir offers the largest variety of Customized Solutions (OEM) products and is therefore best able to satisfy customer requirements.

Many configurations possible

A Customized Solutions (OEM) product is usually needed to monitor laser performance in the system, and possibly to provide fast feedback for system control. Depending on your application, various configurations can be used, such as:

- Just a sensor, with raw analog output
- Sensor with electronics providing an amplified analog or digital output
- Complete instrument, including numeric display and/or PC interface
- Custom designed solution for special requirements

In the following pages, you will see a range of "standard" Customized Solutions (OEM) sensors available; these are actually families of existing Customized Solutions (OEM) sensors with typical specifications shown. They can be tailored as needed to fit your specific requirements.

In addition to the products described below, Ophir has developed hundreds of other Customized Solutions (OEM) products. Simply contact your Ophir representative and specify your needs.

1.4.2 Thermal and Photodiode Customized Solutions (OEM) Sensors

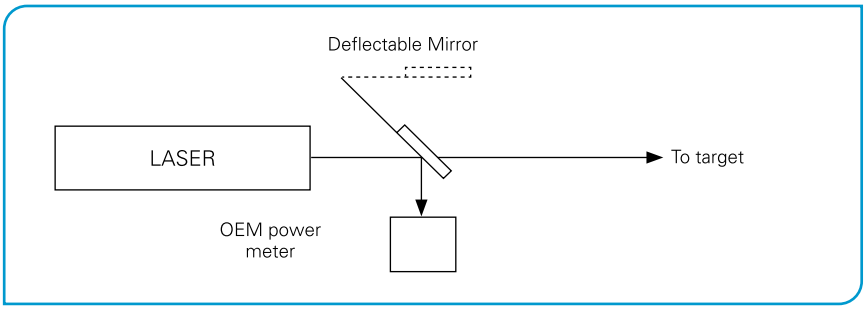
1.4.2.1 Sensor Usage

Ophir pioneered compact self-contained laser power meter sensors with built-in amplifiers. These sensors are easy to install and give a calibrated voltage proportional to power. They contain all the electronics needed including a speed up circuit to increase the speed of response of the sensor to the order of 1s, 0-95%. Connections to the sensors are simple, with the host providing DC power and the sensor providing a voltage or digital output proportional to power.

In most cases, the sensor is used in one of three ways:

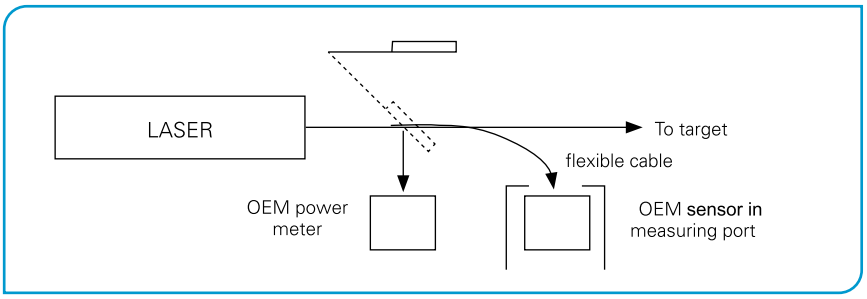
1. Beam Dump Mode

For lasers, such as surgical lasers, which are used in short bursts, the sensor is a beam dump with full power on it at all times except for the short periods of beam use when the beam is deflected to the work area.



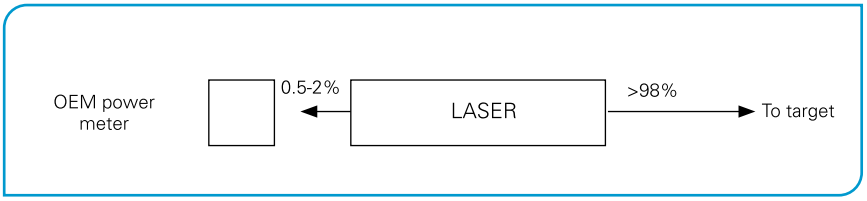
2. Sampling Mode

In this mode, the laser is usually available to the user and is only deflected to the monitor for short times when the beam is sampled by the sensor. Sampling is performed with a deflection mirror or with an output fiber optic cable which is inserted into the measuring port from time to time.



3. Rear Leak Mode

In this mode, a small fraction (0.5-2%) of the laser beam “leaks” out of the rear mirror of the laser and is constantly monitored by the sensor.



1.4.2.2 Advantages of Ophir Thermal and Photodiode Customized Solutions (OEM) Sensors

Compactness

Available in various sizes down to 38x38x25mm as described here and in addition even more compact designs for applications with more limited space.

Versatility

Ophir offers OEM sensors for almost any type of laser, for any power or configuration. These sensors can measure from pW or µJ to Kilowatts or hundreds of Joules, and can be cooled with water, air or conduction. Ophir offers a large selection of standard OEM sensors at competitive prices and with excellent delivery times. If required, the package, including the connectors, can be customized to customer specifications.

Reliability and accuracy

Ophir's thermal measuring sensors use the reliable and accurate thermopile disc principle: the output is a low impedance voltage proportional to power. Suitable absorbers which will not burn out or change reading with high power density lasers are available for any application. Ophir photodiode OEM sensors have very wide dynamic range and with software switchable ranges, one can easily cover 5 decades of intensity.

Calibration

Ophir is an accredited calibration laboratory per ISO/IEC 17025. With a wide variety of calibration sources, Ophir sensors can be factory calibrated at most user required wavelengths.

In addition to the sensors described below, Ophir offers a number of other OEM sensors with larger aperture, diffusers in front, special absorbers and other special features. Ophir also offers an OEM measuring set consisting of a sensor and smart meter.

Possible configurations of thermal or photodiode Customized Solutions (OEM) products include:

- **Sensor with amplified analog output** – purchasing a sensor mounted into a housing with amplifier reduces noise and allows you to get a factory calibrated unit with optimized response time acceleration
- **Sensor with RS232 interface** – for direct RS232 interface of the Customized Solutions (OEM) sensor with the host computer
- **Sensor with USB interface** – for direct USB interface of the Customized Solutions (OEM) sensor with the host computer
- **Sensor with Ethernet interface** – for direct Ethernet interface of the Customized Solutions (OEM) sensor with the host computer. Requires separate power supply connection from rear of sensor
- **Complete solution including sensor and meter** – this provides a visual display for the operator (numeric, Go/No Go, etc.). This can also be in addition to the RS232 or USB output
- **Disc with raw analog output** – the lowest cost solution when there is no need for an amplified signal, and a relative measurement is enough. Typical output voltage is on the order of mV/W
- **Disc with separate amplifier board** – when space is critical, and amplified analog output is needed

100pW to 3W

Features

- Conduction cooled
- Thermal sensors are spectrally flat
- Analog or RS232 output
- Wide dynamic range, switchable ranges
- Selectable wavelengths

3A-UA

PD300-UAS

These specifications refer to standard OEM sensors, and are to be understood as generic, describing sensor families. Ophir will be happy to help you with a specific solution for your particular application.

Model	3A-UA	PD300-UAS
Type	RS232 or Analog output	RS232 or Analog output
Features	Measures very low power, built in amplifier	Small size, built in amplifier, wide dynamic range, detector can be flush with top
Absorber Type	Broadband	Photodiode
Spectral Range µm	0.19 – 20 (c)	0.2 – 1.1 (c)
Aperture mm	Ø9.5	10x10
Maximum Power (a)	3W	Up to 50mW
Power Mode		
Minimum Power	100µW	As low as 100pW
Power Noise Level	<8µW RMS (d)	As low as 1pW

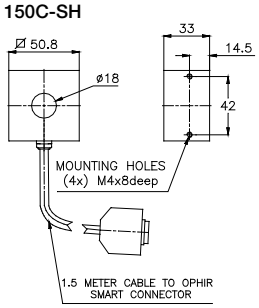
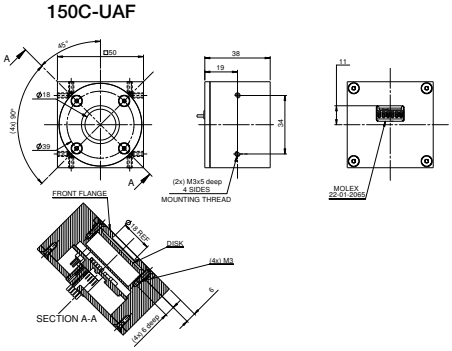
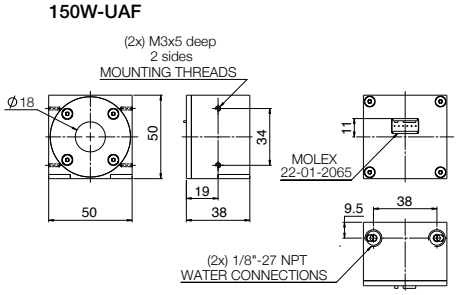
150C-SH



150C-UAF



150W-UAF



1.4.2.3 Standard Customized Solutions (OEM) Thermal Sensors

0.2W to 600W

Features

- Conduction and water cooled
- Spectrally flat
- UAF version can give analog voltage output or digital RS232 output and can measure power or energy. Can also have multiple switchable ranges and/or multiple switchable wavelengths
- UAU and UAE versions are similar to the UAF version but UAU operates via the USB terminal of the PC and UAE via an Ethernet connection

L150C-UAF / UAU / UAE

L250W-UAF / UAU / UAE
L300W-UAF / UAU / UAE

600W-UAF / UAU / UAE

These specifications refer to standard OEM sensors, and are to be understood as generic, describing sensor families. Ophir will be happy to help you with a specific solution for your particular application.

1.4.2.4 Examples of Custom OEM Thermal and Photodiode Sensor Solutions

In addition to the standard OEM products described above, Ophir has accumulated over 25 years of experience in developing products which are tailored to precise physical configurations provided by the OEM customer. These products include custom discs (with or without electronics), specially configured thermal or photodiode-based power sensors, and much more. A number of these special OEM products are shown below.

Flat Profile Thermal Sensor

This sensor with 50mm aperture is used as an exposure detector for photolithography and is only 10mm thick.

Super Compact Thermal Sensor

Thermal Customized Solutions (OEM) sensor designed to be cemented into user system. Dimensions are under 10mm x 20mm footprint and 4mm height. The sensor can be connected to an Ophir smart meter to measure power or energy or can be used directly with voltage output.

Compact, hand held thermal Smart Sensor

This thermal sensor is only 20mm thick to enable probing in hard to reach locations. It can measure up to 25W. It is designed specifically to be hand held, and works with any Ophir Smart Meter.

High Power OEM Sensors

Ophir offers OEM sensors for higher powers than listed above up to 5000W and above. The sensors have a built in electronics module on the rear of the sensor and can be configured to give RS232, USB or Ethernet output.

Special Requirements and Mechanical Designs

Ophir can design made to order mechanical designs to fit the customer's requirements. In addition the design can include clean room requirements, vacuum requirements and special connectors.

OEM BeamTrack or Quad sensor with RS232 output

The BeamTrack sensor showing power, X position, Y position as well as size or Quad showing power, X position and Y position is now available as an OEM version with RS232 of all parameters.

Industrial Type Designs – Ethernet IP/Profinet

Ophir offers industrial designs with industrial type connectors as well as industrial interface protocols such as Ethernet IP/Profinet

Ordering Information:

The products shown above are examples of OEM solutions products developed for specific customer applications. Please consult with your Ophir representative who will be happy to help you with any requirements you may have.

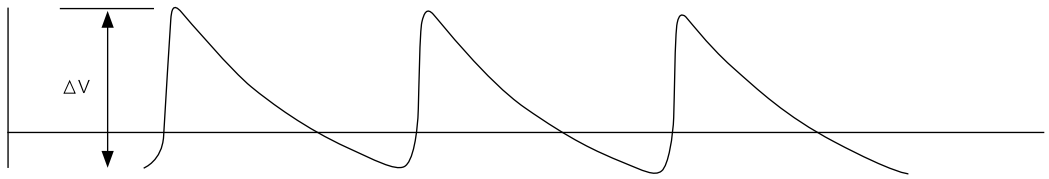
1.4.3 Pyroelectric Customized Solutions (OEM) Sensors

1.4.3.1 Standard Pyroelectric OEM Sensors - Introduction

Ophir manufactures three main types of pyroelectric OEM sensors:

- Compact pyro sensors with no electronics with output connected to the host electronics. Since the energy of pyro sensors is proportional to the peak to valley voltage output and not the maximum voltage output, the user has to take this into account in designing the electronic interface (see below)
- Pyroelectric sensors identical with standard PE-C sensors but with RS232 or analog output instead of connection to smart sensor
- Compact smart PE-C sensors with the electronics in a separate electronics module

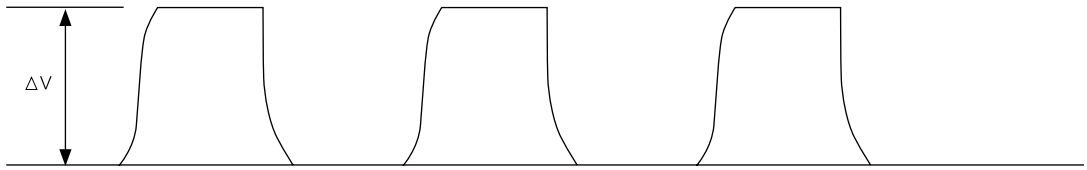
Typical output from a non-amplified pyroelectric sensor appears as follows:



Ophir non amplified pyroelectric sensor output for repetitively pulsing laser

In the example shown above using a non amplified sensor, note that energy is proportional to ΔV and not to the voltage above the zero level. Note also that the peak rapidly decays and therefore the output depends on pulse rate and duration. It follows therefore that in order to measure pyroelectric pulses, the voltage level must be known before the pulse and must also compensate for pulse rate (or work at a low enough pulse rate for the correction to be rendered negligible).

When using a sensor with built-in electronics, typical output appears as follows:



Output from Ophir pyroelectric Customized Solutions (OEM) sensor with built-in signal conditioning

Note that the output voltage is now proportional to the energy and since the voltage is held for a fixed time, the output is much less dependent on pulse rate or duration.
In the above example, the user does not need to perform any signal conditioning but simply has to read the voltage level or get the output in digital form to determine the energy. The output is also available in digital form via RS232.

<0.1µJ to 40J

Features

- Performance identical to standard PE-C sensors (see section 1.2)
- Analog or RS232 output
- Wide dynamic range, switchable ranges
- Selectable wavelengths
- Compact non amplified versions available

Pyroelectric Customized Solutions OEM products – Examples only – many variations are possible

Category	Non amplified sensor. Can be very compact	Standard PE-C with built in digital or analog output. No need for meter or PC interface	PE-C smart sensor with remote electronics module allowing very compact sensor head
Model	**PE10-C-RE**	**PE XX-C-RS232**	**PE-C-RE**
Features	**Very compact**	**Digital output with no need for meter or PC interface**	**Possibility of smart sensor with very compact sensing head**
Absorber Type	Metallic with AR coating	Choose from std PE-C	Metallic or BF
Aperture mm	Ø12	Choose from std PE-C	Usually 10mm
Spectral Range µm [a]	0.19 – 10.6µm	Same as std PE-C	0.19 – 10.6µm
Calibration Accuracy ±% at calibrated wavelength	Usually customer calibrated	3	3
Max Pulse Width	Configurable [b]	Same as std PE-C	Same as similar std PE-C
Max Repetition Rate	Configurable [b]	Same as std PE-C	Same as similar std PE-C
Sensitivity	Typical 40V/J	Same as std PE-C	Same as similar std PE-C
Noise Equivalent Energy	~100nJ	Same as std PE-C	Same as similar std PE-C
Max energy density for 10ns pulses	100mJ/cm² typical	Same as std PE-C	Same as similar std PE-C
Max Average Power Density	3W/cm²	3W/cm²	3W/cm²
Power Supply Requirements	NA	7 – 12VDC (in special cases up to 24V)	Power supplied by smart meter or PC interface
Cooling	Conduction	Air or Conduction	Air or Conduction
Output	Flying leads typical	RS232 or analog	DB15 smart connector
Dimensions	Ø22 x 7.5mm	Same as std PE-C	Sensor head can be very small, see example below. Remote electronics module dimensions
Compliance	RoHS, China RoHS	RoHS, China RoHS	RoHS, China RoHS
Part Number	**Consult Ophir Representative**	**Consult Ophir Representative**	**Consult Ophir Representative**
Notes: (a)	Unit can be calibrated for one or more wavelengths in this range		
Notes: (b)	By choosing circuit capacitance and resistance, maximum pulse rate and width can be optimized. This is usually limited by the condition (max pulse width)*(max pulse rate) < 0.1

* Some sensors are calibrated with a full spectral curve and the user selects any discreet, specific wavelength within the range. For other sensors, the specified spectral range is divided into regions, and the user is prompted to select the region (such as "<800nm"). For those sensors having the full curve, the table above shows which meters support the curve and prompt the user to select specific discreet wavelengths. When using meters that do NOT support this function, the user will only be able to select a number of specific wavelengths from within the range.

* BeamTrack is the trademark name of the sensors that measure power, position and size. They include the Track measuring mode.

Terminology:

Energy - Measurements in Joules.

Exposure - Used to measure the sum of the energy (for Pyroelectric and Photodiode sensors).

Fast Power - Power measurement mode using fast sampling rate; used to measure laser modulation and flicker of LED light sources (for Photodiode sensors).

Low Freq Power - Power measurement mode optimized for VCSELs and similar pulsed sources, where low pulse rate and high pulse peak power would cause problems if measuring in regular power mode.

Power – Measurements in Watts.

Pulsed Power - Can display instantaneous power of a laser pulse. Power is calculated from energy when the length of the pulse is known (for Thermopile sensors).

Track - Used to measure beam position and beam size while measuring power (for Thermopile sensors).

Power Meters and PC Interfaces

Ophir power meters and PC interfaces work on the smart plug principle. This means that almost any Ophir power meter or PC interface can work – plug and play – with almost any of the wide range of Ophir sensors. Ophir power meters are also the most sensitive, lowest noise, most precisely calibrated units on the market thus giving the utmost performance from our smart sensors.
As for ease of use, only Ophir power meters have smart keys to give the easiest and most convenient user interface. The units also come with a versatile range of software to use seamlessly either with the Ophir software or the user's own.

Feature Rich Touchscreen Laser Power/Energy Meter

- Compatible with all standard Ophir Thermal, BeamTrack, Pyroelectric and Photodiode sensors
- Large 7" Full Color Touch Display
- Multilingual interface – English, French, Spanish, Italian, German, Russian, Japanese, Chinese and Korean
- Single and Dual Channel models available
- Various Displays: Bargraph, Analog Needle, Line Plot, Pulse Chart, Pass/Fail, Position, Stability, and Real Time Statistics
- Dual Channel Instrument supports Split and Merged Graphical Displays
- Sophisticated power and energy logging, including logging every pulse at up to 25000Hz with Pyro sensors
- Math functions: Density, Scale Factor, Normalize against base line, etc. Functions can be mixed together, displayed graphically, and can also be logged
- Math Channel allows comparison of two measurements
- Field upgrading of embedded software via USB Flash Drive
- 2GB internal storage and USB Flash Drive for ample data storage [(a)]
- USB and RS232 interfaces with StarLab PC application and User Commands document
- LabVIEW driver and COM Object Interface
- Pulsed Power measurements with Thermopile sensors
- Low Frequency Power with Photodiode sensors - power measurement based on pulse cycle (for VCSEL)
- Fast Power (10kHz) logging with Photodiode sensors
- Exposure measurement (Energy Summing) with Photodiode and Pyroelectric sensors
- Scalable Analog Output, TTL Output and External Trigger Input
- Loudspeaker for Audio Warnings

Centauri is the most feature rich desktop laser power/energy meter on the market. Just plug in one of the many Ophir sensors and you have a whole measurement laboratory at your fingertips. The bright color display gives unparalleled legibility and ease of interpreting information. Centauri has many on board features such as laser tuning, data logging, graphing, normalize, power or energy density, attenuation scaling, max and min limits. Centauri can also display the power or energy as a high resolution simulated analog needle display.

Centauri can be either battery operated or from an AC source with the charger plugged in at all times. Its bright display and user-selectable color format enables ease of use in dark room conditions or when wearing protective glasses.

The built-in USB and RS232 interfaces and StarLab PC software allow display and processing of data either in real time or from previously stored data. Results are displayed graphically on a PC. To support PC interfacing, LabVIEW drivers, a COM Object Interface and demo source code are provided.

The Centauri's dual channel capabilities enable the user to simply plug in any of Ophir's thermal, pyroelectric or photodiode sensors and measure the two channels independently, or a comparison between the two channels.

Centauri Screen Layout

The Centauri's 7" touch-screen provides ease-of-use at the tap of a finger. The display is carefully designed to provide easy reading of the laser measurement, quick access to configuration parameters as well as the ability to set up for more advanced work.

Info Panel. Includes channel (A or B), sensor name, and serial number. Tap the menu icon at the right to easily access more functionality.

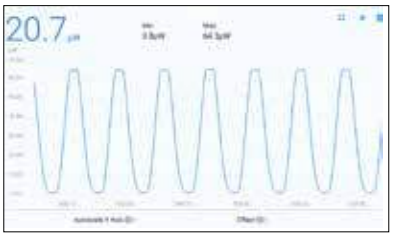
Sensor Settings. Displayed on screen and easily updated. Tap on a parameter to open a window that displays all of the options. Tap on the desired setting to reconfigure and get back to work. Settings are stored in the sensor's memory as the startup settings for the next measurement session.

Measurements. Numeric and Graphical display of reading. Tap Offset to reduce ambient environmental effects on the readings. Tap Zoom to focus the bargraph around the present measurement.

(a) USB Flash Drives of up to 32GB and FAT32 format only (Not exFAT nor NTFS formats).

Selected Screens

Analog needle display of power Persistence and min/max tracking.



Line graph display of power.

Pulse chart display of energy.

Display statistics of the present measurement session.

Pass/Fail screen. Excellent for QA purposes.

Power, Position, and Size measured with a BeamTrack sensor.

Two independent channels of measurement.

Two channels merging into one graph.

Two channels with a math comparison channel.

Specifications

Power Meter	Brilliant color touch-screen TFT 1064 x 600 pixel graphics LCD. Large 16mm digits.
Features	Many screen features including power with bargraph, energy, average, exposure, frequency, graphs, scaling, special units, and more.
I/O's	USB, RS232 and user selectable 1,2,5 and 10 Volt full scale analog output; TTL Output; External Trigger Input; Loudspeaker for Audio Warnings
Screen Refresh	15 times/sec
Case	Molded high impact plastic with optimized angle kickstand. Rubberized sides for easy grip and protection against damage.
Size	Compact 47mm L x 200mm W x 130mm H (Weight 1kg)
Battery	Rechargeable Li-ion batteries with typically 6 hours between charges. The charger also functions as an AC adapter.
Multisensor Option	Two sensors can be connected and measure independently, and with a mathematical comparison.
Data Handling	Data can be viewed on board or transferred to PC: On Board: Data stored to USB Flash Drive (Thumb Drive) at rates up to 25,000 points/s.
Sensor Features	Works with Thermopile, BeamTrack, Pyroelectric (PE-C series) and Photodiode sensors [a].
Program Features	Preferred start up configuration can be set by user.
Compliance	CE, UKCA, China RoHS

Note: (a) Not including BC20 and PD300RM sensors

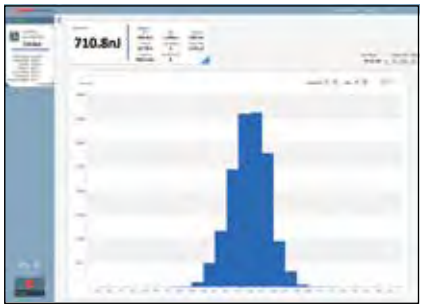
Item	Description	Ophir P/N
Centauri Single Channel	Centauri high end power meter for Thermal, BeamTrack, Pyroelectric and Photodiode sensors	7Z01700
Centauri Dual Channel	Dual Channel high end power meter for Thermal, BeamTrack, Pyroelectric and Photodiode sensors	7Z01701
Centauri Dual Channel Activation Code	Software activation code to field upgrade a Single Channel Centauri to Dual Channel capabilities	7Z11056
Centauri USB Cable	USB-A to MICRO-B cable (1 unit supplied with Centauri)	7E01279
Centauri RS232 Cable	D9 to 3.5mm plug cable (1 unit supplied with Centauri)	7E01213
N Polarity Power Supply/Charger	Power Supply/Charger AC/DC 12V 2A N-2.1x5.5 (1 unit supplied with Centauri)	7E05029
General Purpose I/O Connector	Used as analog output, external trigger output and TTL output plug (3 units supplied with Centauri)	7E02008

Feature Rich Laser Power/Energy Meter

- Compatible only with all standard Ophir thermal, BeamTrack, pyroelectric (PE-C series only) and photodiode sensors
- Brilliant color large size TFT 320x240 display
- Choose between Digital with Bargraph, Analog Needle, Line Plot (for laser tuning), Pulse Chart, Pass/Fail, Position, Stability, Real Time Statistics displays
- Sophisticated power and energy logging, including logging every point at up to 5000Hz with Pyro sensors
- Math functions for advanced processing such as Density, Scale Factor, Normalize against base line, etc.
- Can mix functions together and display the results graphically. Function results can also be logged
- USB Flash Drive for nearly unlimited data storage
- USB and RS232 interfaces with StarLab PC application and User Commands (see User Commands document in website)
- LabVIEW driver and COM Object Interface
- Pulsed Power measurements with Thermopile detectors
- Low Frequency Power - power measurement from pulse cycle energy (for VCSEL)
- Exposure measurement (Energy Summing) with Photodiode and Pyroelectric sensors
- Select between English, Japanese, Russian, and Chinese interfaces
- Soft keys and menu driven functions with context sensitive help
- Compact handheld design with rubberized bumpers and optimized kickstand
- Backlighting and rechargeable battery
- Scalable Analog Output

StarBright is the most feature rich handheld laser power/energy meter on the market. Just plug in one of the many Ophir sensors and you have a whole measurement laboratory at your fingertips. The bright color display gives unparalleled legibility and ease of interpreting information. StarBright has many on board features such as laser tuning, data logging, graphing, normalize, power or energy density, attenuation scaling, max and min limits. StarBright can also display the power or energy as a high resolution simulated analog needle display.



StarBright can be either battery operated or from an AC source with the charger plugged in at all times. Its bright display and user-selectable color format enables ease of use in dark room conditions or when wearing protective glasses.

The built-in USB and RS232 interfaces and StarLab PC software allow display and processing of data either in real time or from previously stored data. Results are displayed graphically on a PC. To support PC interfacing, LabVIEW drivers, a COM Object Interface and demo source code are provided.

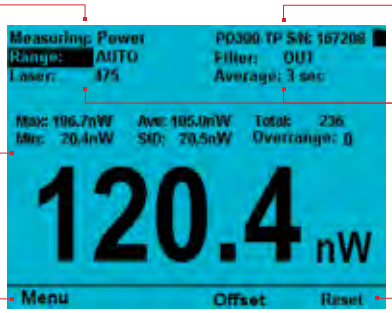
StarBright Screen Layout

StarBright screen ergonomics raise the user experience to new levels. The display is carefully designed to provide easy reading of the laser measurement, quick access to configuration parameters as well as the ability to set up for more advanced work.

Select measurement mode (power, energy, etc.)

Measurement display area. User can select the display type. In this example, the user has chosen large numeric readout with real time statistics.

Press the Menu key to access additional StarBright functions including logging, pass/fail inspection and math processing.



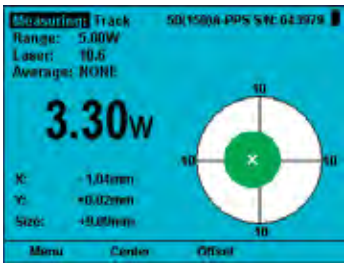
Sensor name and serial number

Configuration parameters for laser measurement. These settings are sensor specific and saved in the sensor's memory.

Softkeys for additional display functionality. In this example, press Offset to remove background noise from the measurement. Press Reset to clear the statistics and start over.

Selected Screens

Analog needle display of power Persistence and min/max tracking.

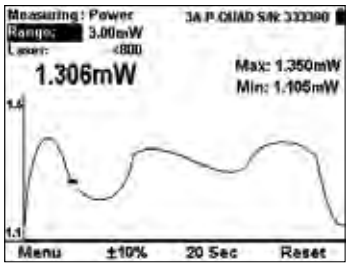


Power, Position, and Size measured with a BeamTrack sensor.

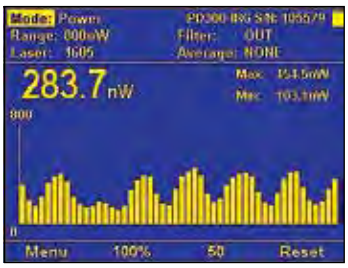
Bargraph display of energy. Colors set for work with protective glasses.

Power density measured after rescaling the power measurement.

Data logs filed to USB Flash Drive. Can be viewed in StarLab or Excel.



Line graph display of power. Wraps back to start for continuous display.



Pulse chart display of power.

Power measurement of laser pulse.
For use with high-power pulsed lasers.

Exposure measurement (energy summing) with photodiode sensor.

Specifications

Power Meter	Brilliant color TFT 320 x 240 pixel graphics LCD. Large 16mm digits.
Features	Many screen features including power with multicolor bar graph, energy, average, exposure, frequency, graphs, scaling, special units, and more.
Outputs	USB, RS232 and user selectable 1, 2, 5 and 10 Volt full scale analog output.
Screen Refresh	15 times/sec
Case	Molded high impact plastic with optimized angle kickstand. Rubberized sides for easy grip and protection against damage.
Size	Folds to a compact 212mm L x 114mm W x 40mm H
Battery	Rechargeable Li-ion batteries with typically 8 hours between charges. The charger can be ordered from your local distributor. The charger also functions as an AC adapter.
Data Handling	Data can be viewed on board or transmitted to PC On Board: Data stored to USB Drive (Thumb Drive) at rates up to 5000 points/s.
Sensor Features	Works with Thermopile, BeamTrack, Pyroelectric (PE-C series) and Photodiode sensors. Works with our PD300RM sensors.
Program Features	Preferred start up configuration can be set by user. User can recalibrate power, energy, response time and zero offset.
Compliance	CE, UKCA, China RoHS

StarBright	StarBright universal power meter for Thermal, BeamTrack, Pyroelectric and Photodiode sensors	7Z01580
Carrying Case	Carrying case 38x30x11 cm. For power meter and up to 3 sensors	1J02079
StarBright USB Cable	USB-A to MICRO-B cable (1 unit supplied with StarBright)	7E01279
StarBright RS232 Cable	D9 to 3.5mm plug cable (1 unit supplied with StarBright)	7E01213
StarBright Battery Pack	Replacement battery pack for StarBright	7E14008
P Polarity Power Supply/Charger	Power Supply/Charger AC/DC 12V 2A P-1.35x3.5 (1unit supplied with StarBright)	7E05047
Standard Analog Output Connector	2.5mm mono jack (1unit supplied with StarBright)	7E02008

Color Screen Laser Power/Energy Meter

- Compatible with all standard Ophir thermal, BeamTrack, pyroelectric and photodiode sensors
- Brilliant color large size TFT 320x240 display
- Compact handheld design with rubberized bumpers and optimized 2 position kickstand
- Choice of digital or analog needle display
- Illuminated keys for working in the dark
- Select between English and Japanese interfaces
- Analog output
- Log every point at up to 4000Hz with pyro sensors
- Non-volatile data storage up to 250,000 points
- Laser tuning screen and power and energy log
- USB and RS232 interfaces with StarLab and StarCom PC applications, LabVIEW driver and COM Object Interface (see pages 159-165)
- Soft keys and menu driven functions with on line help
- Many software features such as density, min/max, scaling etc.

The Vega is a very versatile and sophisticated handheld laser power/energy meter. Just plug in one of the many Ophir sensors and you have a whole measurement laboratory at your fingertips. The bright color display gives unparalleled legibility and ease of interpreting information. The Vega has many on board features such as laser tuning, data logging, graphing, normalize, power or energy density units, attenuation scaling, max and min limits. The Vega can also display the power or energy with a high resolution simulated analog needle display.

The Vega can be operated either by battery or from an AC source with the charger plugged in at all times. Its bright display and backlit keys allow easy use in dark room conditions or with laser glasses on.

The built-in USB and RS232 interfaces and StarLab and StarCom PC software allow on-line processing of data or processing previously stored data; results are displayed graphically on a PC. To support PC interfacing, LabVIEW drivers and COM Object Interface are provided.

StarLab Software

Selected Screens

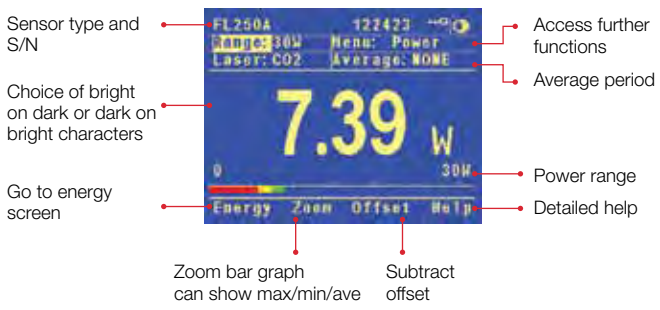
Digital Power Screen and Color Functions

- Choice of bright on dark or dark on bright characters
- Optimize colors for use with laser eye protection glasses
- Can average over selected period. Useful for unstable lasers
- Bar graph can show max / min / average in different colors

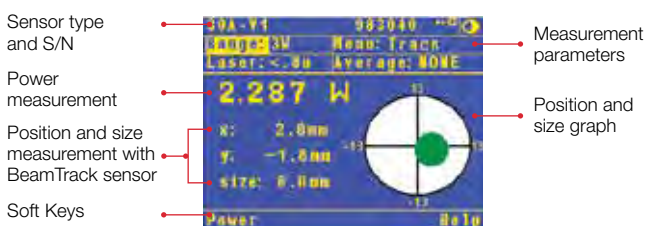
BeamTrack Power/Position/Size Screen

- Monitoring of laser beam size
- Accurate tracking of beam position to fractions of a mm
- Beam position and wander
- All the other features of standard power/energy meters

Standard Power Screen



BeamTrack Power/Position/Size Screen



Analog Power Screen

- Perfect for adjusting and maximizing laser power
- Persistent graphical display allows tracking of minimum maximum values measured
- Large analog needle with small digital display as well

Energy/Limits Screen

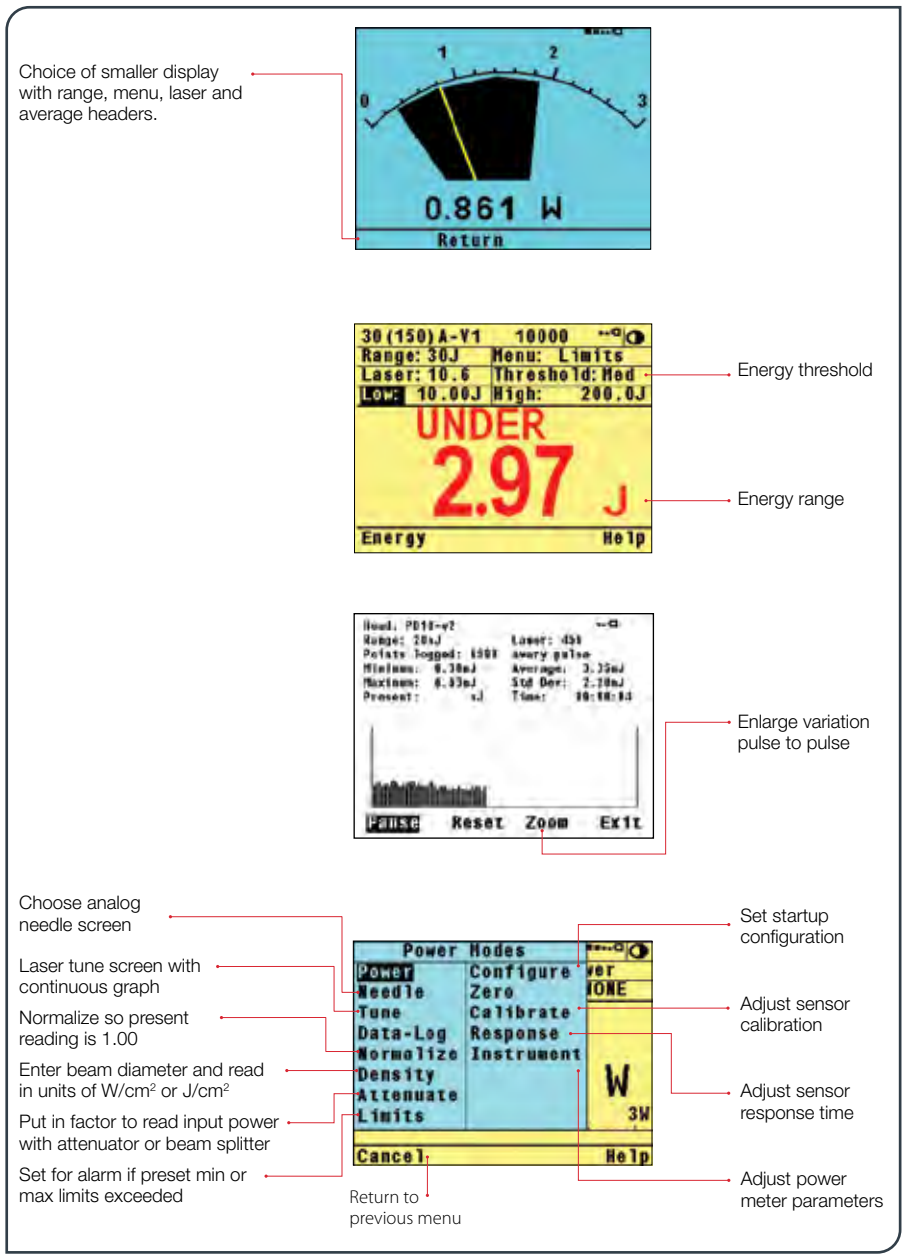
- Pulsed energy sensors (single or repetitive) and thermal sensors (single shot only)
- Frequency measurement with pulsed energy sensors
- Limits screen with bright colored warning

Energy Logging Screen

- Pyroelectric and thermal sensors
- Continuous scroll with up to 100 points on screen
- Full statistics
- Store data onboard and recall

Additional Functions

- Press the menu choice on the main screen and many more options pop up as shown



Specifications

Power Meter	Brilliant color TFT 320 x 240 pixel graphics LCD. Large 16mm digits. High resolution analog needle also can be chosen.
Features	Many screen features including power with multicolor bar graph, energy, average, exposure, frequency, graphs, scaling, special units, and more. Complete on line context sensitive help screens.
Outputs	USB, RS232 and user selectable 1, 2, 5 and 10 Volt full scale analog output.
Screen Refresh	15 times/sec
Case	Molded high impact plastic with optimized angle two level kickstand. Rubberized sides for easy grip and protection against damage.
Size	Folds to a compact 210mm L x 109mm W x 36mm H
Battery	Rechargeable NiMH batteries with typically 18 hours between charges. The charger can be ordered from your local distributor. The charger also functions as an AC adapter.
Data Handling	Data can be viewed on board or transmitted to pc: On Board: Non-volatile storage of up to 250,000 data points in up to 10 files. Max onboard data logging rate 4000 [a] points/s and Max data logging rate to the PC 2000 [a] points/s.
Sensor Features	Works with Thermopile, BeamTrack, Pyroelectric (PE-C series) and Photodiode sensors [b].
Program Features	Preferred start up configuration can be set by user. User can recalibrate power, energy, response time and zero offset.
Compliance	CE, UKCA, China RoHS

Notes: (a) The above refers to the rate of logging every single point in turbo mode. Above that rate, the instrument will sample points but not log every single point

Notes: (b) Not including PD300RM sensors

Low Cost Laser Power / Energy Meter

- Compatible with all standard Ophir Thermal, BeamTrack, Pyroelectric (PE-C series only) and Photodiode sensors
- Brilliant large size TFT 320x240 display
- Compact handheld design with rubberized bumpers and optimized kickstand
- Choice of digital or analog needle display
- Select between English, Japanese, Russian and Chinese interfaces
- Analog output
- Easy to use soft keys
- Easy measurement configuration with context sensitive help
- Backlighting and rechargeable battery
- Single shot energy measurement with thermal sensors
- Power averaging
- Resizable Screen graphics
- EMI rejection
- Optional software package for USB communication with our StarLab PC suite

StarLite is a low cost power / energy meter capable of measuring power or energy from pJ and pW to hundreds of Joules and thousands of Watts. It also supports position and size measurement with the BeamTrack family of sensors. StarLite can also display the power or energy with a high resolution simulated analog needle display.

All StarLite measurement screens can be configured to either show the measurement parameters or to hide them in order to maximize the graphical and numeric displays.

StarLite can be operated either by battery or from an AC source with the charger plugged in at all times. Its backlight allows illumination of the power meter in low light conditions.

Selected Screens

Standard Analog Output Connector	2.5mm mono jack (1 unit supplied with StarLite)	7E02008

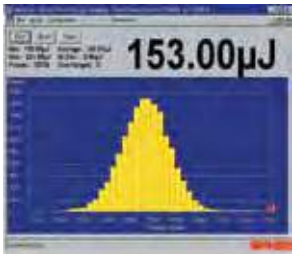
Versatile Laser Power/Energy Meter

- Two models available: dual and single channel
- Single channel model can be upgraded to dual channel
- Compatible with all standard Ophir thermopile, pyroelectric, photodiode and RP sensors
- Large LCD display
- Backlighting and rechargeable battery
- Screen graphics and statistics (std dev. min, max)
- Analog output
- Built-in RS232 interface
- Log every data point at >1500Hz with pyroelectric sensors
- Non-volatile data storage up to 59,400 points
- Laser tuning screen and power log
- Audio sound for laser tuning and low battery
- RS232 interface with StarCom PC application software and LabVIEW driver (see pages 159-165)
- GPIB option (IEEE488.1)
- NIST traceable
- CE marked
- Soft keys, menu-driven

IEEE 488 GPIB Cable for LaserStar

The LaserStar's dual channel capabilities enable the user to simply plug in any of Ophir's thermal, pyroelectric or photodiode sensors and measure the two channels independently, or a comparison between the two channels.
Up to 10 data files (54,000 points total) can be stored for onboard review or downloading to computer even if LaserStar has been switched off. The built-in RS232 interface and StarCom PC software allow on-line processing of data or processing previously stored data; results are displayed graphically on a PC. To support PC interfacing, LabVIEW drivers are provided.

LabVIEW

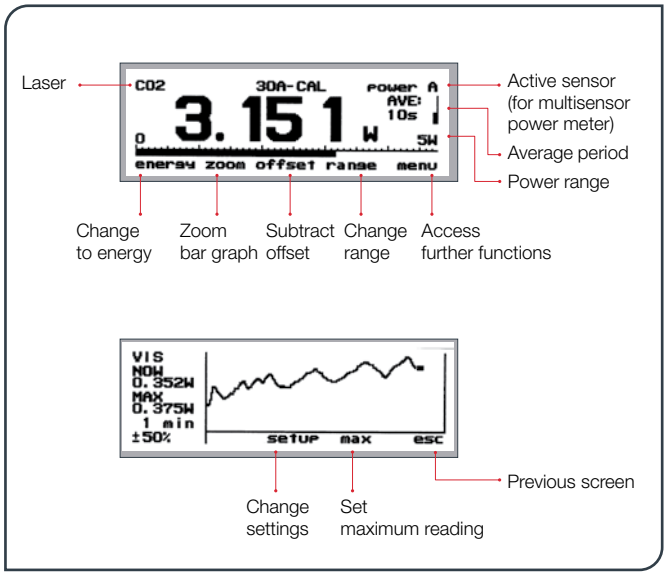


StarCom Software

Selected Screens

Digital Power Screen

- CW industrial, medical and scientific lasers
- pW to multi kW with appropriate sensors
- Can average over selected period. Useful for unstable lasers
- Fast response bar graph



Laser Tuning Screen or Power Log Screen (not shown)

- Maximizing laser power
- User selected time period and zoom
- Option of audio tune tone for maximizing laser power

Energy Measurement Screen

- Pyroelectric and thermal sensors - single pulse
- Pyroelectric frequency measurement

Energy Log Screen

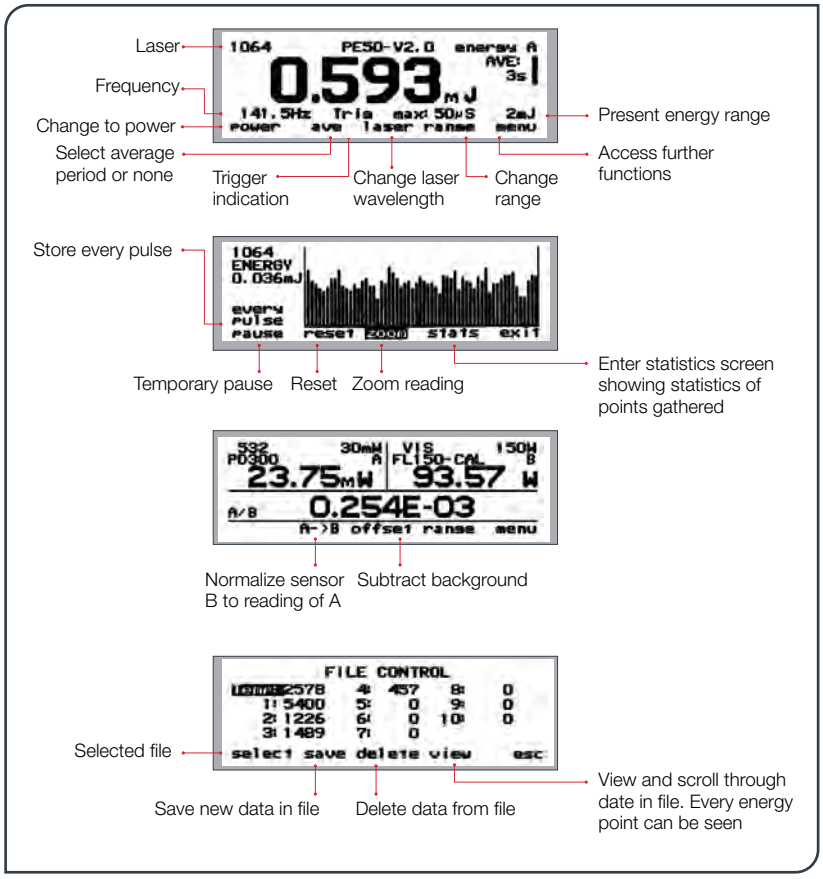
- Pulsed energy sensors
- Thermal sensors - successive single pulses
- Continuous scroll
- Energy statistics

Ratio Screen

- Two independent sensors
- Measure ratio, sum, difference
- Normalize one sensor to the other

Data Storage and Transmission

- Non-volatile storage of power and energy logging data
- Store in up to 10 files and transmit to PC
- PC using StarCom Windows program provided



Specifications

Power Meter	High legibility 64 x 240 pixel graphics supertwist LCD with switchable, electroluminescent backlight which operates from charger or battery. Large 17mm digits. Screen refresh 15Hz.
Features	Many screen features including: power with bargraph, energy, average, exposure, frequency, graphs and more.
Outputs	RS232 and analog output 1V f.s.
Screen Refresh	15 times /sec
Case	Molded high-impact plastic with swivel display and EMI conductive shielding, to allow use even in proximity to pulsed lasers.
Size	Folds to a compact 194mm L x 228mm W x 57mm H.
Battery	Rechargeable 18 hours between charges. The charger can be ordered from your local distributor. The charger also functions as AC adapter.
Multisensor Option	Two sensors can be connected and measure independently, or with a mathematical comparison. Also the ratio, sum or difference of the two can be displayed.
Data Handling	Data can be viewed on board or transmitted to PC: On Board: Non-volatile storage of up to 54,000 data points in up to 10 files. Max data logging rate >1500 points/s. Transmitted to PC: Data transmission rate of ~500 points/s. RS232 baud rate of 38400.
Sensor Features	Works with standard Thermal [a], Pyroelectric [b], Photodiode [c] and RP sensors.
Program Features	Preferred startup configuration can be set by user. User can recalibrate power, energy, response time and zero offset.
Compliance	CE, UKCA, China RoHS

Notes: (a) When operating with BeamTrack sensors, measures Power & Energy only
Notes: (b) Limited functions for new Pyroelectric (PE-C series) sensors
Notes: (c) Not including PD300RM sensors

Note: (a) P/N 7Y78300 replaces P/N 78300

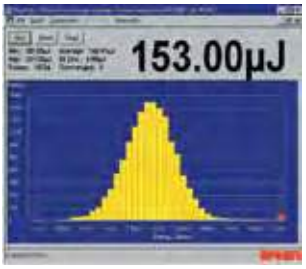
Compact and Durable Power / Energy Meter

- Compact and durable
- Compatible with all standard Ophir sensors: thermal, pyroelectric* and photodiode
- Single shot energy measurement with thermal sensors
- Optional RS232 interface with StarCom PC application and LabVIEW driver (see pages 159-165)
- Power and energy logging with graphical display and statistics
- Power averaging
- Easy to use soft keys, menu-driven
- Screen graphics
- Backlight and rechargeable battery
- Analog output
- EMI rejection

RS232 cable for Nova

Compatible with the complete range of Ophir thermal (power and energy), pyroelectric and photodiode sensors, Nova is truly versatile: measuring power or energy from pJ and pW to hundreds of Joules and thousands of Watts. With the optional scope adapter, you can connect your pyro sensor to an oscilloscope and see every pulse up to the maximum frequency permitted by the sensor.
Smart connector sensors automatically configure and calibrate Nova when plugged in. Soft keys guide you through the screen graphics. Finished working? Your configuration can be saved for future use.
Nova's autoranging tune screen displays laser power graphically and displays maximum power. Zoom and time scale can be adjusted by user.

The optional RS232 interface and StarCom PC software allow on-line processing of data or processing previously stored data; results are displayed graphically on a PC. To support PC interfacing, LabVIEW drivers are provided.



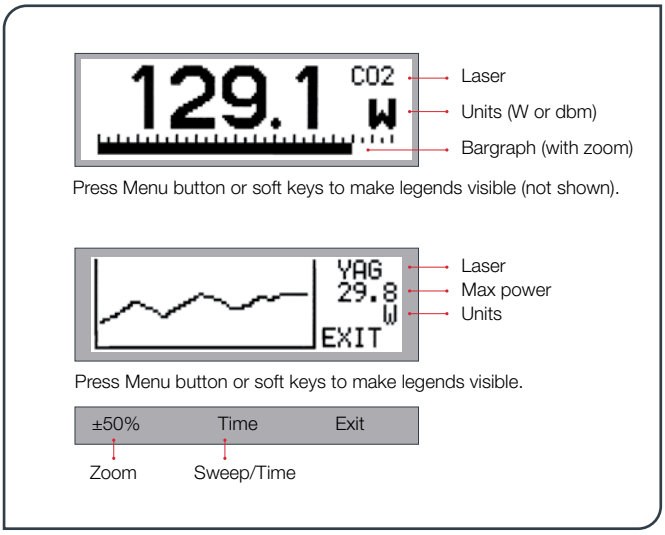
StarCom Software

LabVIEW

Selected Screens

Digital Power Screen

- CW industrial, medical and scientific lasers
- pW to multi kW with appropriate sensors



Laser Tuning Screen or Power Log Screen (not shown)

- Maximizing laser power
- User selected time period and zoom

* PE-C series of pyroelectric sensors are compatible with Nova, when used with an additional adapter (P/N 7Z08272) – see page 110.

Energy Measurement Screen

- Pyroelectric and thermopile sensors-single pulse
- Pyroelectric frequency measurement (not shown)

Energy Log Screen

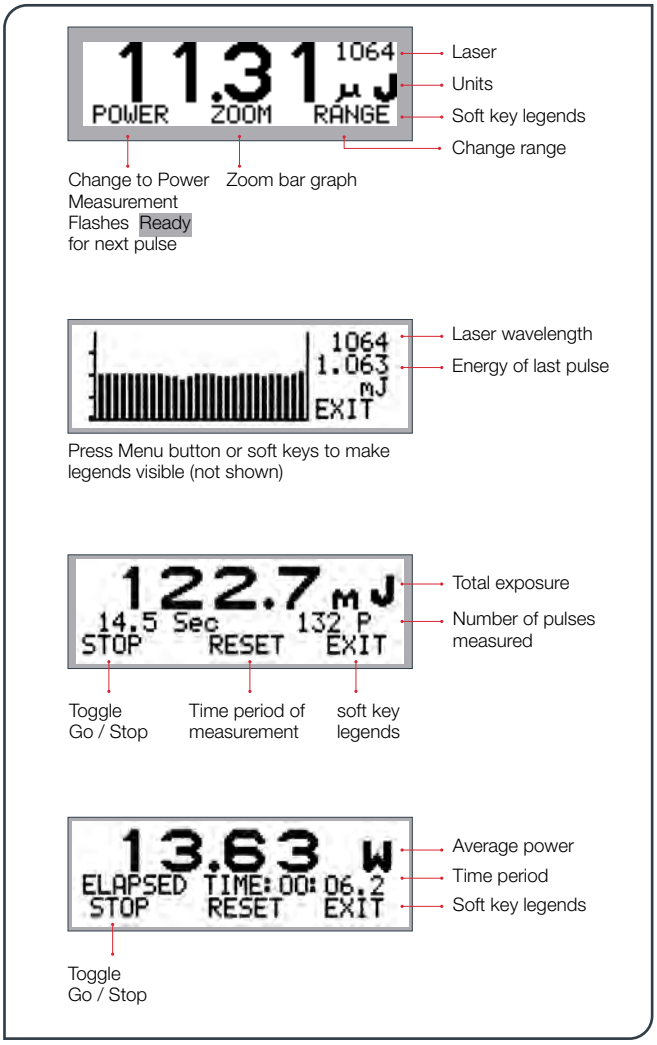
- Pyroelectric sensors
- Thermopile sensors-successive single pulses
- Continuous scroll
- Energy statistics

Pyroelectric Exposure Screen

- Sum or average energies over user selected time period / number of pulses
- Medicine, photolithography

Average Screen

- Thermopile, photodiode and pyroelectric sensors (Does not operate with PE-C series of pyroelectric sensors)
- Periodic (1/3 sec to 30 sec) or continuous (10 sec to 1 hour) average for fast-changing or slow-changing laser



Specifications

Power Meter	High legibility 32 x 122 pixel graphics supertwist LCD with switchable electroluminescent backlight. Large 12mm digits.
Features	Many screen features: including power with bar graph, energy, average, exposure, frequency, graphs, and more.
Outputs	RS232 and analog output 1V f.s. (optional)
Screen Refresh	15 times / sec.
Case	Molded high-impact plastic with kickstand and EMI conductive shielding, to allow use even in proximity to pulsed lasers.
Size	Very compact: 205mm L x 95mm W x 39mm H.
Battery	Rechargeable 12 volts. 22 hours use between charges. The charger can be ordered from your local distributor. The charger also functions as AC adapter.
Data Handling	Data can be viewed on board or transmitted to PC: On Board: Max data logging rate >10 points/s Transmitted to PC: Data transmission rate of ~50 points/s. RS232 baud rate of 19200
Sensor features	Works with standard Thermal [a], Pyroelectric [b] and Photodiode [c] sensors.
Program features	Preferred startup configuration can be set by user. User can recalibrate power or energy. Response time. Zero offset.
Compliance	CE, UKCA, China RoHS

Notes: (a) When operating with BeamTrack sensors, measures Power & Energy only
Notes: (b) In order to operate with the new Pyroelectric (PE-C series) sensors, Nova needs an adapter (see ordering information below)
Notes: (c) Not including PD300RM sensors

Nova RS232 assemblies - allow Nova power meter to communicate with PC and be controlled by PC		
Nova RS232 Assembly	RS232 adapter with standard 2 meter cable (including software) (see page 151)	7Y78105 [a]
Nova RS232 Assembly	RS232 adapter with 5 meter cable (including software)	7Y71052 [b]
Nova RS232 Assembly	RS232 adapter with 8 meter cable (including software)	7Y71051 [c]
Battery Pack	Replacement battery pack for Nova	7E14005A
N Polarity Power Supply/Charger	Power Supply/Charger AC/DC 12V 2A N-2.1x5.5 (1 unit supplied with Nova)	7E05029
Standard Analog Output Connector	2.5mm mono jack (1 unit supplied with Nova)	7E02008

Note: (a) P/N 7Y78105 replaces P/N 78105
Note: (b) P/N 7Y71052 replaces P/N 781052
Note: (c) P/N 7Y71051 replaces P/N 781051

Power Supply/Charger
Negative Polarity Power Supply/Charger for Centauri, Vega, Nova II, LaserStar, Nova, EA-1, Pulsar and Quasar
Positive Polarity Power Supply/Charger for StarBright and StarLite & Power Supply/Charger for Juno-RS.

Analog Output Connectors & Cables
Replacement standard analog output plug for most Ophir meters.
Replacement analog output plug for LaserStar and for Juno-RS.

Juno-RS Analog Output Cable

Standard Analog Output Connector

LaserStar Analog Output Connector

StarLite USB Activation Code
Software Activation Code that enables the StarLite meter to communicate in USB with our StarLab software suite.

Centauri Dual Channel Activation Code
Software activation code to field upgrade a Single Channel Centauri to Dual Channel capabilities.

USB Cables for Meters & Interfaces
Cables for communicating with the PC in USB – for use with our StarLab application, COM Objects, LabVIEW and to upgrade Firmware files.

Ethernet Cable for EA-1
Ethernet cross cable for communicating with an Ethernet network or direct to a PC for initial setup of the device – can be used with our StarLab or OphirEthernetApp applications or with customer's own software.

RS232 Cables for Meters & Interfaces
Cables for communicating with the PC in RS232 – for use with our StarCom application or to use our RS232 command set.

RS232 Module for Nova
Plug in module allows transfer of power and energy data to PC and remote control of power meters from PC. Includes manual and StarCom application program (refer to page 164).

IEEE488 GPIB for LaserStar
Option available with LaserStar power meter allowing LaserStar to operate with GPIB protocol.
The option comes with StarCom software and also LabVIEW VIs to build LabVIEW applications.

Carrying Cases
Carrying case for StarBright, StarLite, Vega, Nova II or Nova power meters and up to 3 sensors.

Ordering Information

Juno-RS RS232 Cable	D9 Male/Female 1.8-2 meter	7E11216
Centauri / StarBright RS232 Cable	D9 to 3.5mm plug cable	7E01213
Nova II / Vega RS232 Cable	D9 to mini DIN cable	7E01206
Nova RS232 Module	RS232 adapter with 2 / 5 / 8 meter cable (including software)	7Y78105 / 7Y71052 / 7Y71051 [a]
LaserStar RS232 Cable	RS232 D9 to D25 Cable	7E01121
LaserStar IEEE Option	IEEE GPIB adapter for LaserStar	7Y78300 [a]
Carrying Case for StarBright, StarLite, Vega, Nova II and Nova	Carrying case 38x30x11 cm. For Power Meter and up to three sensors	1J02079

Note: (a) 7Y78105 (was 78105), 7Y71051 (was 781051), 7Y71052 (was 781052), 7Y78300 (was 78300)

2.2 PC Interfaces

2.2.1 PC Connectivity Options for Power/Energy Measurement

Ophir Pyroelectric, Thermal and Photodiode sensors measure at up to 25,000 points per second

Ophir sensor to USB interfaces with up to 4 channel connectivity

Ophir EA-1 interface with Ethernet connectivity

Ophir Quasar interface with wireless connectivity

Transmit real time data to PC at 500 points per second via Bluetooth

Transmit real time data to PC at up to >25,000 points/s (sensor limited) via Ethernet

Transmit real time data to PC at up to 25,000 points/s per channel (sensor limited) via USB

Transmit real time data to Android via USB

StarLab Software (data transmitted via USB, Ethernet or Bluetooth)

StarViewer Application (data transmitted via Bluetooth and USB)

StarLab Software

StarViewer Android Application

Convert your PC or Android device into an Ophir sensor power/energy meter

- From sensor to interface to PC - powered from USB
  - Plug and play with all standard Ophir smart sensors
  - Position & size measurement with BeamTrack sensors
  - Record every energy pulse at up to 10kHz
  - Log power and energy, average, statistics, histograms and more with included StarLab application
  - Pulsed Power measurements with Thermopile detectors
  - Low Frequency Power - power measurement from pulse cycle energy (for VCSEL)
  - LabVIEW VIs and COM Object interface

- From sensor to interface to Android Device - powered from USB
  - Plug and play with all standard Ophir smart sensors
  - Measure power and energy, average, statistics and more with included Android StarViewer application
- Very compact - is just an extension of the smart plug

Smart Sensor to Juno to PC

Ophir's basic smart compact Juno module turns your PC or Laptop into a full-fledged Ophir laser power/energy meter.
Just install the software, plug the sensor into the Juno module and connect the Juno with a standard USB cable to the PC USB port.
You can connect several Juno modules to the PC.

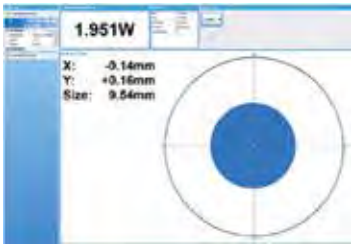
Smart Sensor to Juno to Android device

Ophir's basic smart compact Juno module turns your Android device into a full-fledged Ophir laser power/energy meter.
Just install the StarViewer application, plug the sensor into the Juno module and connect the Juno with a standard USB cable to the device USB port.

Juno with StarViewer

LabVIEW

Juno operating with StarLab software



Juno with BeamTrack sensor and StarLab showing beam power, position and size

Specifications

Power Measurement	
Power log period	1s to Unlimited
Energy Measurement	
Max real time data logging to PC	10,000Hz [a]
Trigger input and output	N.A.
Timing	Supports time stamp for each pulse - resolution 10µs
General	
Number of sensors supported	One sensor per unit. Can combine several units with software for display of up to 8 sensors on one PC
Compatible sensors	Supports all standard Ophir Pyroelectric, Thermal, BeamTrack and Photodiode sensors [b]
Power supply	Powered from USB
Dimensions	77mm L x 55mm W x 23mm H
Compliance	CE, UKCA, China RoHS

Notes:
(a) This is the data logging rate for every single point in turbo mode. Above that rate, the instrument will sample points but not log every single point
(b) Not including PD300RM sensors

Ordering Information

Item	Description	Ophir P/N
Juno	Compact module to operate one Ophir sensor from your PC USB port. Comes with software	7Z01250
Juno USB cable	USB-A to MINI-B Cable (1 unit supplied with Juno)	7E01217

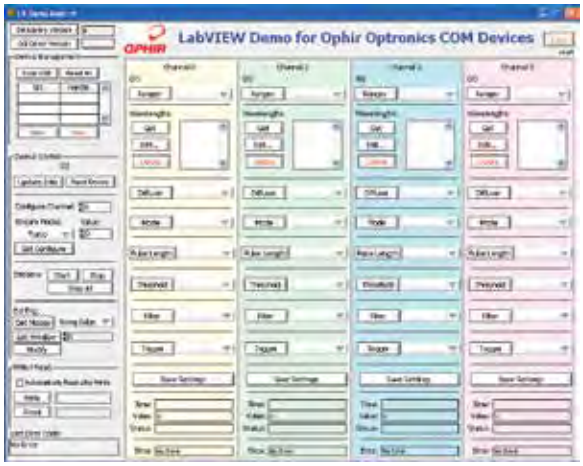
2.2.3 Juno+ USB Interface

Convert your laptop or desktop PC into an Ophir sensor power/energy meter

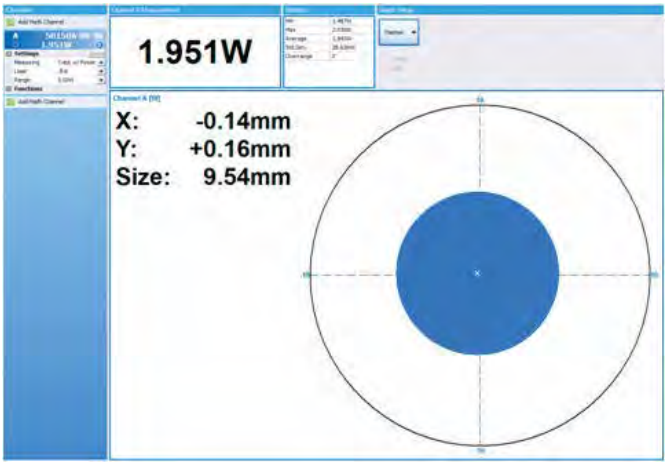
- From sensor to interface to PC - powered from USB
- Autonomous mode: Outputs voltage relative to measurement while connected via USB to a standalone power supply and not a PC
- Plug and play with all standard Ophir smart sensors
- Position & size measurement with BeamTrack sensors
- Record every energy pulse at up to 10kHz
- Analog output
- Log power and energy, average, statistics, histograms and more with included StarLab application
- Pulsed Power measurements with Thermopile detectors
- Low Frequency Power - power measurement from pulse cycle energy (for VCSEL)
- LabVIEW VIs and COM Object interface

Smart Sensor to Juno+ to PC

Ophir's basic smart compact Juno+ module turns your PC or laptop into a full-fledged Ophir laser power/energy meter.
Just install the software, plug the sensor into the Juno+ module and connect the Juno+ with a standard USB cable to the PC USB port.
You can connect several Juno+ modules to the PC.



LabVIEW



Juno+ with BeamTrack sensor and StarLab showing beam power, position and size

Specifications

Power Measurement	
Power log period	1s to Unlimited
Energy Measurement	
Max real time data logging to PC	10,000Hz [a]
Trigger input and output	N.A.
Timing	Supports time stamp for each pulse - resolution 10µs
General	
Number of sensors supported	One sensor per unit. Can combine several units with software for display of up to 8 sensors on one PC
Compatible sensors	Supports all standard Ophir Pyroelectric (PE-C series), Thermal, BeamTrack and Photodiode sensors. Works with our PD300RM sensors.
Power supply	Powered from USB
Outputs	USB and user selectable 1, 2, 5 and 10 Volt full scale analog output
Dimensions	105mm L x 80mm W x 29mm H
Compliance	CE, UKCA, China RoHS
Notes:	(a) This is the data logging rate for every single point in turbo mode. Above that rate, the instrument will sample points but not log every single point

Ordering Information

Item	Description	Ophir P/N
Juno+	Module to operate one Ophir sensor from your PC USB port. Comes with software	7Z01252
Juno+ USB cable	USB-A to MINI-B Cable (1 unit supplied with Juno+)	7E01217
Standard Analog Output Connector	2.5mm mono jack (1 unit supplied with Juno+)	7E02008

2.2.4 EA-1 Compact Ethernet Adapter

Connects your Ophir sensor to an Ethernet bus

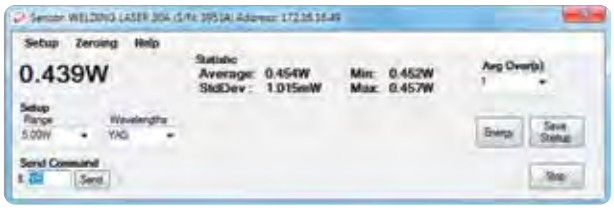
- From sensor direct to Ethernet with no PC connection
- Powers directly from the Ethernet bus or 12V power supply
- Supports thermal, photodiode and pyroelectric smart sensors
- Low Frequency Power - power measurement from pulse cycle energy (for VCSEL)
- Software support via StarLab application or 'Ophir Ethernet App' PC application software package, both included
- Allows remote monitoring via Telnet, HTTP or UDP protocols

DB15 connector

Mini-USB connector;
Ethernet RJ45 connector;
12V power connector

Smart Sensor to EA-1 to Ethernet to PC

The EA-1 is suitable for customers who desire Ethernet connectivity and want to remotely monitor and control the sensor via their own custom software or the Ophir provided PC application. The EA-1 is designed to connect an Ophir smart sensor to your Ethernet. Standard thermopile, pyroelectric and photodiode sensors are supported. The unit is powered directly from the Ethernet bus if Power Over Ethernet (PoE) is available, or from a standard Ophir 12V power supply if not. The sensor can be monitored remotely over the Ethernet bus, allowing remote connections from distances far in excess of those allowed via RS232 or USB. The device is suitable for industrial or other environments where the bus of choice is Ethernet. Telnet, HTTP and UDP protocols are supported.
Installation and choosing an IP address are simplified via the simple Ophir Ethernet App PC application supplied with the unit. The PC application allows setup and basic functionality such as monitoring power and energy and changing measurement scales or wavelengths. Configuration of the IP address is via the Ethernet or a separate USB connection. The PC operating screen is shown below measuring power and energy.



PC application power screen

PC application energy screen

Additional features such as logging power or energy graphically are provided by the StarLab PC application which also supports the EA-1 device.

Specifications

Model	EA-1 Ethernet Adapter
Use	Monitoring Ophir Sensors via Ethernet
Measurement Parameters	As defined by sensor
Supported Sensors	Thermal [a], Photodiode [b] and Pyroelectric (PE-C series)
Number of Sensors Supported	One sensor per unit
Data Logging	Thermophile and Photodiode sensors: logging of power at 15Hz into log file Pyroelectric and PD-C sensors: via Ophir Ethernet App – logging of energy at up to ~400Hz into log file via StarLab or direct Ethernet connection – logging of energy at up to ~40kHz
Instruction Set	Supports entire Ophir instruction set for controlling and monitoring sensor
Power Supply	Power over Ethernet or separate 12V power supply
Dimensions	93mm L x 73mm W x 29mm H
Weight kg	0.1
Compliance	CE, UKCA, China RoHS
Notes:	(a) BeamTrack functions are only supported via user commands or StarLab, but not with the PC application (b) Not including BC20, PD300-CIE and PD300RM sensors

Ordering Information

Item	Description	Ophir P/N
EA-1	Compact module to operate Ophir sensors over the Ethernet. Comes with basic PC software	7Z01240
EA-1 USB Cable	USB-A to MINI-B Cable (1 unit supplied with EA-1)	7E01217
EA-1 Ethernet Cable	Ethernet Cross Cable (1 unit supplied with EA-1)	7E01192
N polarity Power Supply/Charger	Power Supply/Charger AC/DC 12V 2A N-2.1x5.5 (1 unit supplied with EA-1)	7E05029

Convert your laptop or desktop PC into a multichannel power/energy meter

- From sensor to interface to PC
- 1,2 and 4 channel models
- Plug and play with most Ophir sensors
- Record every energy pulse at up to 25kHz
- Measure missing pulses & trigger output with external trigger
- Log power and energy, average, statistics, histograms and more with included StarLab application
- LabVIEW VIs and COM Object Interface included

Smart Sensor to Pulsar to PC

Ophir's 1-4 channel Pulsar interface turns your PC or laptop into a full-fledged Ophir multi-channel laser power/energy meter. Just install the software, plug the sensor into the Pulsar and the USB cable from the Pulsar to the PC USB port. With the Pulsar series, you can connect up to 4 sensors to each module, monitor each pulse at up to 25kHz and utilize external trigger.

LabVIEW

Pulsar-4 operating with StarLab software

Specifications

Power Measurement	
Power log period	1s to Unlimited
Energy Measurement	
Max real time data logging to PC	25,000Hz [a]
Trigger input and output	BNC trigger input to enable measurement of missing pulses or to select specific pulses. Can also be configured to give trigger output
Timing	Supports time stamp for each pulse - resolution 1µs
General	
Number of sensors supported	4 / 2 / 1 sensors per unit. Can combine several units with software for display of up to 8 sensors on one PC
Compatible sensors	Supports all standard Ophir Pyroelectric, Thermal [b] and Photodiode [c] sensors
Power supply	12V wall cube power supply plugs into jack on rear. The power supply can be ordered from your local distributor.
Dimensions	103mm L x 190mm W x 33mm H
Compliance	CE, UKCA, China RoHS
Notes:	(a) Limited by the maximum repetition rate of the sensor. (b) When operating with BeamTrack sensors, measures Power & Energy only. (c) Not including BC20, PD300-CIE and PD300RM sensors.

Ordering Information

Item	Description	Ophir P/N
Pulsar-4	Module to operate up to 4 Ophir sensors from your PC USB port. Comes with software. Max repetition rate for every pulse 25kHz. Has external trigger capability. Powered from wall cube power supply (can be ordered from your local distributor)	7Z01201
Pulsar-2	Same as above but for 2 channels only	7Z01202
Pulsar-1	Same as above but for 1 channel only	7Z01203
Pulsar USB Cable	USB-A to B cable (1 unit supplied with Pulsar)	7E01202
N Polarity Power Supply/Charger	Power Supply/Charger AC/DC 12V 2A N-2.1x5.5 (1 unit supplied with Pulsar)	7E05029

2.2.6 Quasar Wireless Bluetooth Interface

Straight from your measuring sensor to your PC or Android device with no cables

- Quasar wireless interface connects to any Ophir sensor and broadcasts to your PC or your Android device running StarViewer
- Wireless range of 10-30 meters depending on surroundings
- Operates from rechargeable battery with typically >40 hours lifetime
- Powerful USB interface with StarLab PC application software included or StarViewer Android application
- Converts your PC or your android Device into a complete laser power/energy meter
- Log power and energy, average, statistics, histograms and more (only in PC)
- Monitor up to 7 Quasars simultaneously on one PC (only in PC)

Quasar Bluetooth Wireless Sensor to PC Interface

Quasar module connects to any Ophir sensor, thermal, pyroelectric or photodiode

Any PC, laptop or Android device connects to Quasar module via Bluetooth adapter and operates as a power/energy meter/data logger

Specification

Sensor Compatibility	All Ophir standard sensors, Thermal [a], Photodiode [b] and Pyroelectric
Number of Sensors on One PC	Up to 7 Quasars can operate simultaneously and be displayed at the same time on one PC
Operating Range	10-30 meters depending on surroundings when used with built in laptop Bluetooth or Ophir recommended adapter
Power	Powered by rechargeable NiMH battery. Battery life typical 40 hours, 20 hours for pyro sensors. Automatically goes into sleep mode when not connected to PC. Low batt indication. Charges from 12VDC either polarity. The charger can be ordered from your local distributor.
LED Indicator	LED indicator indicates whether connected, in standby or off
Bluetooth Standard	Bluetooth class 1. Connection to PC is transparent to user. Will work with built in laptop Bluetooth and most add on USB to Bluetooth adapters.
Data Transfer Rate for Pyro Sensors	500Hz
Dimensions	94mm L x 96mm W x 36mm H not including antenna
Connections	15 pin D type sensor connector standard Ophir 12V charger input
Compliance	CE, UKCA, China RoHS
Notes:	(a) When operating with BeamTrack sensors, measures Power & Energy only. (b) Not including BC20, PD300-CIE and PD300RM sensors.

Ordering Information

Item	Description	Ophir P/N
Quasar Bluetooth Interface	Module to operate one Ophir sensor from your PC via Bluetooth wireless interface. Comes with software. Max repetition rate for every pulse 500Hz. Powered from built in rechargeable battery. Comes with power supply. Bluetooth adapter required when not available on PC. See next line	7Z01300
Battery Pack for Quasar	Replacement battery pack for Quasar	7E14007A
N Polarity Power Supply/Charger	Power Supply/Charger AC/DC 12V 2A N-2.1x5.5 (1 unit supplied with Quasar)	7E05029

Communications

With Ophir RS232, USB, Bluetooth, Ethernet and GPIB communication options you can transfer data from the sensor to the PC in real time or offline. You can also control your Ophir power meter from the PC.

- USB on Nova II, Vega, StarBright, Centauri (optional on StarLite) power meters and Juno, Juno+, Pulsar PC interfaces
- Bluetooth wireless on Quasar interface
- RS232 on LaserStar, Nova II, Vega, StarBright, Centauri and Juno-RS optional on Nova
- GPIB optional on LaserStar
- Ethernet on EA-1 interface

Notes:
(a) The above refers to the rate for logging every single point in turbo mode. Above that rate, the instrument will sample points but not log every single point.
(b) For pyroelectric sensors, maximum guaranteed baud rate is 9600.
(c) StarLite must be USB enabled in order to work with StarLab. If your StarLite has not been USB enabled, please contact your Ophir distributor in order to obtain a USB Activation Code.

2.3 Software Solutions

2.3.1 StarLab

StarLab turns your PC into a laser power/energy multi-channel station

Extensive Graphic Display of Data

- Line Plot, Histogram, Bar chart, Simulated Analog Needle
- Multiple data sets on one graph or separate graphs on the same screen

Advanced Measurement Processing

- Power/Energy Density, Scale Factor, Normalize against a reference
- Multi-channel comparisons
- User defined mathematical equations: channels A/B, (A-B)/C etc.
- Position & size measurement with BeamTrack sensors

Data Logging for Future Review

- Can be displayed graphically or saved in text format
- Easily exported to an Excel spreadsheet

Fully supports IPM, Ariel, Centauri, StarBright, StarLite, Vega, Nova II, Pulsar, Juno, Juno+, Juno-RS, Quasar and EA-1 devices with all standard Ophir sensors

Flexible Display Options with StarLab

Choose which channels to display

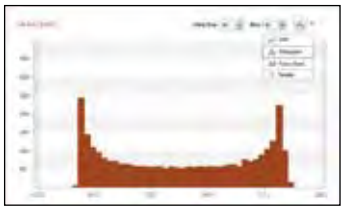
Setup screen

One of the above screens is maximized

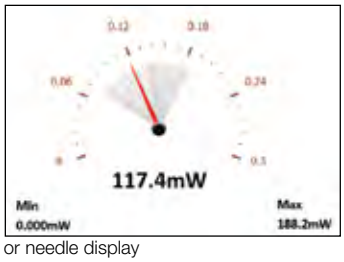
You may choose to display them separately

Maximize one of the sources

Choose line graph



or histogram



or needle display

Multiple Sensors displayed together

Click on one of the channels

The numerical values are from the channel chosen

Here multi line graph display has been chosen

Settings and functions may be opened to adjust then minimized as needed

Additional functions are available from the "Functions" tab

Here multi line histogram display has been chosen

Functions

Click on f(x) to open another trace combining measured values

Logging

Files are stored here. They may be viewed graphically OR numerically

Click on log button and logging of values starts

```

2.3.2 System Integrator Solutions

Besides their use as stand-alone, fully featured laser power/energy meters, Ophir devices are easily incorporated into larger end-user applications. This allows system integrators to leverage Ophir's excellence in measurement capabilities with legacy analysis packages.

Communication Protocols

All Ophir devices support one or two forms of communication with the PC.

Device	USB	RS232	GPIB	Bluetooth	Ethernet
Centauri	●	●			
StarBright	●	●			
Vega	●	●			
Nova II	●	●			
*StarLite	●				
LaserStar		●	●		
Nova		●			
Juno / Juno+	●				
Juno-RS		●			
EA-1					●
Pulsar	●				
Quasar				●	

* With USB activation code

USB

Ophir provides a common interface for communication and control of all of our USB speaking devices. OphirLMMeasurement is a COM object that is included as part of the StarLab installation (StarLab 2.10 and higher) that allows the system integrator to take control of the Centauri, Ariel, StarBright, StarLite, Juno, Juno+, Nova II, Pulsar, USBI and Vega devices; integrating them into his in-house measurement and analysis package.

For communication via USB, device drivers and additional support software must be installed on your PC. These components are installed as part of the StarLab application's installation process.

RS232

RS232 communication is the simplest to integrate into your Customized Solutions (OEM) application. Integrated Development Environments (IDE's) such as Microsoft Visual Studio provide functions and methods for accessing the PC's com port.

The following is all that you need to get your RS232 applications up and running

- User Commands document contains an alphabetical listing and detailed description of all commands available with the Centauri, StarBright, Vega, Nova II and Juno-RS devices.
- Appendix A5 of the StarCom User Manual contains an alphabetical listing and detailed description of all commands available with the Nova and LaserStar devices.
- Appendix A4 of the StarCom User Manual gives an example of polling the Nova device for measurements. This was written in VB6.
- An appropriate RS232 assembly
- Nova RS232 Assembly (P/N 7Y78105 [a]) for use with the Nova device
- Nova II / Vega RS232 cable (P/N 7E01206) for use with the Nova II and Vega devices (included with the Nova II / Vega)
- LaserStar RS232 cable (P/N 7E01121, included with the LaserStar)
- StarBright / Centauri RS232 cable (P/N 7E01213, included with the StarBright and Centauri)
- Juno-RS RS232 cable (P/N 7E11216, included with the Juno-RS)

GPIB

Besides RS232, the LaserStar can also communicate via GPIB (IEEE 488.1). Using the SDK supplied by the vendor of your GPIB controller hardware, a LaserStar IEEE cable (P/N 7Y78300 [b]) and the StarCom User Manual, you can integrate the LaserStar into your GPIB solution.

Bluetooth

Bluetooth system integration for the Ariel and Quasar is easily accomplished, in a similar way to our RS232 devices. For more information (and a list of commands), please contact Ophir.

Ethernet

The EA-1 Ethernet Adapter device provides system integration using a Telnet connection over an Ethernet network. A list of user commands is provided, similar to the RS232 commands described above. See the EA-1 User Manual for more details, available on the website.

System Integrators will need the following components:

- OphirLMMeasurement COM Object.pdf. lists and describes the methods and events available for configuring, controlling and uploading measurements from Ophir devices.
- OphirLMMeasurement.dll. COM object component developed and supplied by Ophir for communication with the Centauri, StarBright, StarLite, Juno, Juno+, Nova II, Pulsar, USBI and Vega devices. The COM object is registered when the application is installed. OphirLMMeasurement COM Object.pdf describes how to register it on another PC where the Ophir application has not been installed.
- Standard USB cable (P/N 7E01202) for use with the Pulsar device (included).
- Standard mini-B USB cable (P/N 7E01217) for use with the Juno and Juno+ devices (included).
- Nova II / Vega USB cable (P/N 7E01205) for use with the Nova II and Vega devices (included).
- StarBright / StarLite / Centauri micro-B USB cable (P/N 7E01279) for use with StarBright, StarLite and Centauri devices (included).

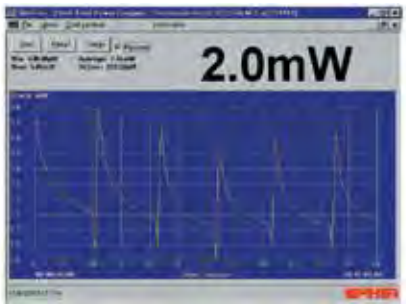
Ophir provides example projects of COM Object clients in VC#, VB.NET and LabVIEW. These are found in the Automation Examples subdirectory of our StarLab PC Application.

Note: (a) P/N 7Y78105 replaces P/N 78105
Note: (b) P/N 7Y78300 replaces P/N 78300

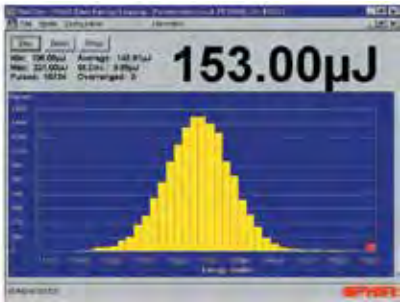
2.3.3 StarCom

This software is supplied with the Nova II, LaserStar, Vega and Nova with RS232 option. It allows you to measure, analyze and record power and energy from any Ophir sensor.
You can log the data from each sensor simultaneously to file.

Plot of ratio of energy B/A vs. energy A



Plot of power vs. time



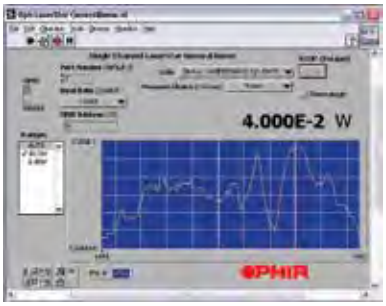
Histogram plot of energy distribution

2.3.4 LabVIEW Solutions

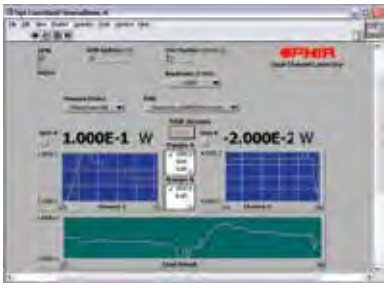
Ophir has long recognized the growing LabVIEW community of developers. For over 10 years, we have been providing LabVIEW libraries for all of our devices. These are full open-source applications that can be used as is or tailored by the LabVIEW programmer to his specific needs.

These starter applications are basic software only that allows the LabVIEW programmer to experiment freely to fully feel the strength of our devices' respective command sets.
These applications contain VIs (Virtual Instruments) to control the instrument. You can combine VIs to create successively larger and more versatile larger VIs by simply connecting them together. Users can create sophisticated, custom applications in minutes. In most cases, applications can be built and tested even before the instrument even arrives. The versatility of these tools is limitless.

All of our LabVIEW libraries can be downloaded from our web site: www.ophiropt.com

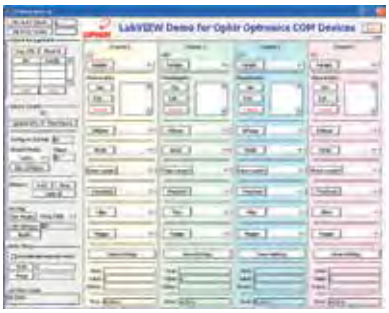


VI Libraries
Ophnova.llb
Library supplied for use with the Nova. Communication is in RS232 and is based on NI-VISA.



OphIstrd.llb
Library supplied for use with the Dual-Channel LaserStar.
Communication can be set to RS232 or GPIB and is based on NI-VISA.

OphInstr.llb
This library can be configured to work with the Nova II, Vega, or Single-Channel LaserStar devices. It can also work with the Juno, Juno+ or Juno-RS with a Thermopile or Photodiode sensors.
It can be set to RS232, USB or GPIB. It is based on NI-VISA for all 3 communication protocols.



LabVIEW COM Demo.llb
Library supplied for use with all of our USB speaking devices (Ariel, Centauri, StarBright, StarLite, Juno, Juno+, Nova II, Pulsar, Vega). Makes use of our COM object. Included with our StarLab application.

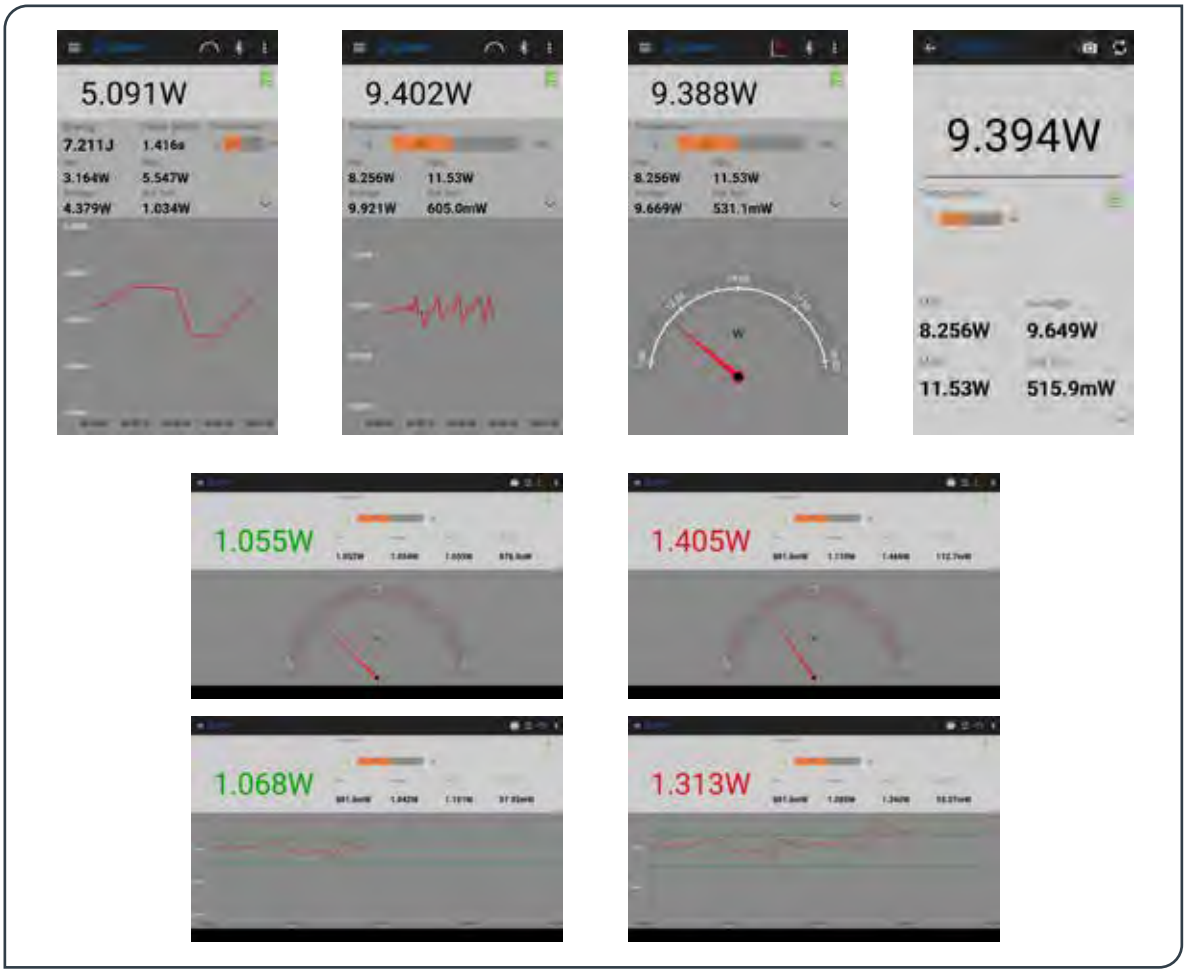
2.3.5 StarViewer Android App

Description:

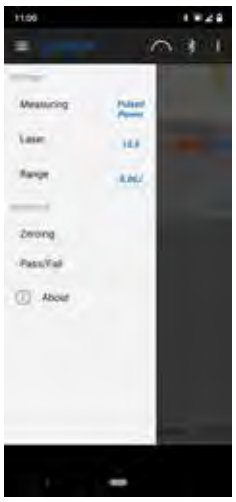
- Turn your Android smartphone or tablet into a laser power / energy meter (Android version 7 or higher). Available on Google Play
- Works with Ariel/Juno/Quasar devices
- Display measurements as line graph, simulated analog needle, or full screen numeric display with statistics
- Screen Capture and Share built into the application
- Measurement settings fully configurable to match your laser measurement needs
- Great for field technicians that make service calls

StarViewer brings laser power and energy measurement to your Smartphone / Tablet via our Ariel, Juno & Quasar devices.
It is an intuitive easy-to-learn application. Just install it, connect to your device, and get started immediately.

StarViewer allows you to display the measurement in a time-based line graph, as a needle display, or large numeric display with statistics.



You can also perform a screen capture and share it. Great for field technician's reporting results back to the lab. StarViewer can be used with any standard Ophir Thermopile, Photodiode, or Pyroelectric PE-C sensor. The measurement settings are fully configurable by opening the settings panel at the left of the screen.



StarViewer can be used with the Juno via your device's USB on-the-go (OTG) port, or via Bluetooth with the Quasar and Ariel.

Requirements:

- Android version 7 or higher

For use with the Ariel:

- Bluetooth: Minimum version 4.0 required, 5.1 recommended
- Ariel firmware version 1.33 or higher (available here)
- StarViewer supports and leverages Ariel's measurement capabilities to display Continuous Power, Single Pulse Energy, and Pulsed power together with Pulse width, Battery level and temperature

Note: The Ariel you are using might have a lower F/W version, please update it to v1.33

For use with the Juno:

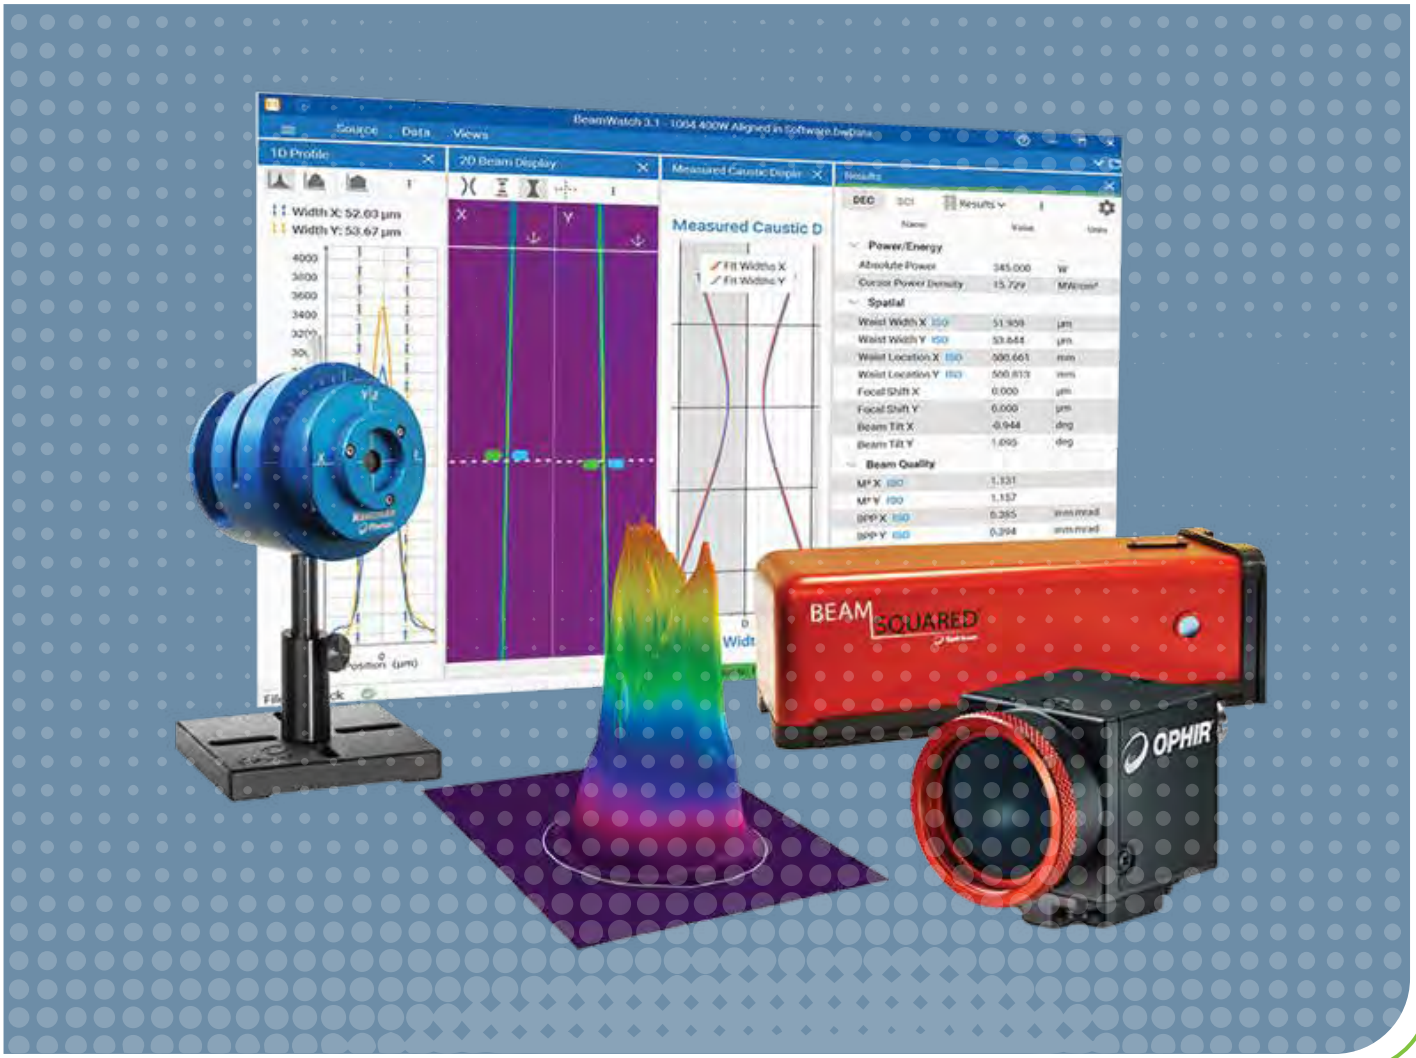
- Smartphone / tablet with an OTG port, capable of providing 100mA or more downstream current
- Optional - OTG adapter - from USB connector on your device to USB Type A Female Adapter (for Juno cable)
- Juno firmware version 1.39 or higher (available here)

For use with the Quasar:

- Bluetooth capability
- Quasar version 1.25 or higher (available here)
- PIN code for Bluetooth pairing is 1234
- Note: StarViewer does not support measurement with Pyroelectric sensors with the Quasar

Ophir StarViewer Android App

2022 LASER BEAM ANALYSIS



3.1 Choosing a Beam Profiler

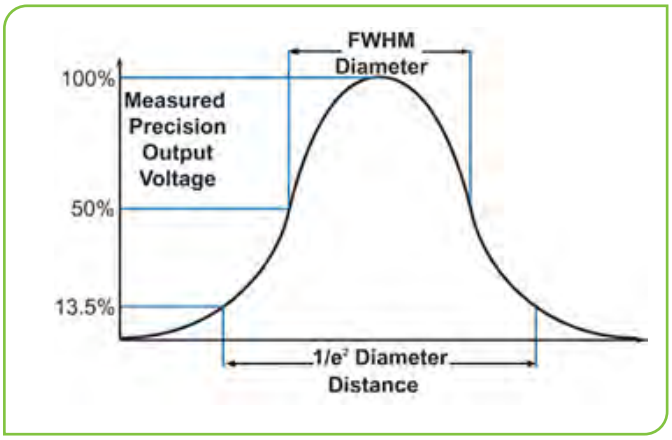
A laser beam profiler will increase your chance of success anytime you wish to design or apply a laser or when you find your laser system is no longer meeting specifications. You would never think of trying to build a mechanical part without a micrometer. So why attempt to build lasers or laser systems with only a power meter? You will produce the desired results more quickly if you can measure basic things like beam width or size, beam profile and power.

We believe as Lord Kelvin said: "You cannot improve it if you cannot measure it".

3.1.1 Basic Questions

When choosing a laser beam profiler there are a plethora of choices to do the job, including CCD and CMOS cameras, scanning slit sensors, InGaAs and pyroelectric cameras, pinhole, and knife edge sensors to mention some. How does one decide which is the proper solution for one's application and from which company to obtain the profiler system? When making the selection there are four basic questions about the laser application that one must answer.

Wavelength?



The first question is: *What wavelength(s) do you intend to measure?* The answer to this question determines the type of detector needed, and what the most cost effective approach may be. For the UV and visible wavelength range from <193nm up to the very near infrared at around 1300nm, silicon detectors have the response to make these measurements. The largest number of cost effective solutions exist for these wavelengths including CCD cameras and silicon detector-equipped scanning aperture systems. Which of these is the best will be determined by the answers to the other three questions.
For the near infrared, from 800 to 1700nm, the choices become less abundant. In the lower end of this range from 800–1300nm the CCD cameras may still work, but InGaAs arrays become necessary above 1300nm. These are more expensive; four to five times the cost of the silicon CCDs. Scanning slit systems equipped with germanium detectors are still quite reasonably priced, within a few hundred dollars of their silicon-equipped cousins. At the mid and far infrared wavelengths the pyroelectric cameras and scanning slits sensors with pyroelectric detectors provide viable alternatives, again the best approach being determined by the answers to the subsequent questions.

Beam Size?

The second question is: *What beam width or spot size do you wish to measure?* This question can also impact the profiler type choices. Arrays are limited by the size of their pixels. At the current state-of-the-art pixels are at best around 4µm for silicon arrays, and considerably larger, 30µm to 80µm with InGaAs and pyroelectric cameras. This means that a UV-NIR beam should be larger than 50µm or roughly 10 pixels in diameter to ensure that enough pixels are utilized to make an accurate measurement. Beams with spot sizes smaller than 50um can be optically magnified or expanded to be measured with a camera. InGaAs camera pixels are around 30µm, limiting the minimum measurable beam size to 300µm; pyroelectric array pixels are even larger at 80µm, meaning the beams need to be at least 0.8mm to yield accurate results. Scanning slit profilers can measure with better than 3% accuracy beams that are four times the slit width or larger, putting the minimum beam sizes at around 8µm without magnification. Those investigators who want to measure their beams directly without additional optics could find this to be an advantage.

Power?

The third question is: *What is the power of the beam?* This determines the need for attenuation, and/or beam splitting, as well as the detector type. Array detectors, such as silicon CCD, CMOS, InGaAs and Pyroelectric cameras will usually need attenuation when measuring lasers. Scanning slit type profilers can measure many beams directly without any attenuation, due to the natural attenuation of the slit itself. Detector arrays and knife-edge profilers, by their nature, will allow the entire beam to impact the detector at some point in the measurement, leading to detector saturation unless the beam is appropriately attenuated. Lasers of any wavelength with CW powers above 100mW can be measured with the pyroelectric detector-equipped scanning slit profiler, making it the easiest profiler for many applications. Scanning slit profilers can directly measure up to kilowatts of laser power, depending on the spot size or power density.

CW or Pulsed?

The final question is: *Is the laser continuous wave (CW) or pulsed?* Lasers that operate pulsed at repetition rates less than ~10 kHz are best profiled with an array. Scanning apertures cannot measure many beam sizes at this repetition rate effectively in real time . CW and pulsed beams with repetition rates above ~10 kHz can be measured with scanning slits if the combination of the repetition rate and the beam size are sufficient to have enough laser pulses during the transit time of the slits through the beam to obtain a good profile. Knife-edge profilers are only able to measure CW beams. Pulsed beams have other considerations when selecting a beam profiling instrument, particularly pulse-to-pulse repeatability, and pulse-energy damage thresholds of the slit material or in the case of array detectors, beam sampling optics.

One More Question

Besides these four questions about the physical nature of the laser to be measured, there is one more that needs to be asked: How accurate does the measurement need to be? Not all profilers or profiler companies are equal in this regard. Properly designed, maintained and calibrated camera and slit - based profilers can provide sub-micron precision for both beam width and beam position (centroid) measurements.

A state-of-the-art CCD array with 4µm pixels can provide ±2% beam width accuracy for beams larger than 50µm. Accuracy for smaller beams may be worse due to the effects of insufficient resolution or pixilation. In addition, the effects of attenuation optics, noise and proper baseline zeroing or offset compensation can have dramatic impact on the accuracy of the measurement. Cameras that are not designed specifically for profiling may be much worse due to the presence of a cover glass and/or IR cut-off filter covering the array. These optical elements must be removed for laser profiling to prevent interference fringes or distortion of the beam being tested. Camera arrays provide a true two-dimensional picture of the beam and will show fine structure and hot and cold spots, which a slit will integrate out. Some applications do not require a map of the laser power distribution within the spot: spot size and spot location are sufficient. Other applications require that a careful mapping of the complete mode structure is made. These applications require 2D, array based sensors. The accuracy requirement is a question of what the data is to be used for. Accurate collimation or focus control requires the highest beam size accuracy. Checking the laser for hot spots, uniformity or beam shape dictates that the 2D sensor is employed and is as important as absolute size measurement accuracy.

How and where a profiler is to be used is also an important consideration in the equation. Profilers used by research and development scientists are often specialized. Ease-of-use and high throughput may be of no consequence if the purpose is to characterize specific optical systems that are well understood by the investigator. On the other hand, when a profiler needs to be used on the factory floor for quality assurance of the manufacturing process, ease-of-use, high throughput, and reproducibility become paramount. In this case the profiler requiring the least “fiddling” is generally the best fit. Here there is a competition between the intuitive and the ease-of-use. Some people find the 2-dimensional camera array to be the most intuitive, because they can relate to the idea of “taking a picture” of the laser beam; X-Y scanning slits may seem less intuitive. For any process that uses or works with CW or high frequency pulsed lasers the scanning slit will have the advantage of measuring the beam directly, possibly even at its focus point, without additional attenuation optics. The dynamic range of these systems is also broad enough to measure both the focused and the unfocused beam without changing the level of attenuation. Camera arrays, on the other hand will require attenuation adjustment.

Conversely, if the important aspect of the measurement is the two-dimensional image of the beam, or if the laser is pulsed at a low repetition rate, the array will be the solution; even if it means attenuation optics.

Also, many factory applications may want to ‘embed’ the beam profiler into a manufacturing cell or a piece of automation so the measurements and possibly pass/fail results are completed automatically. If so, look for a system that has this ability. Automation capability typically means the laser beam profile system communicates to other applications through LabView, Excel or .NET.

Whether choosing a camera or scanning slit system the user must first determine the laser beam measurement environment and what measurements are the most important to the success of the application. Ease of use and absolute spot size favors the scanning slit system while knowing about the hot and cold spots or the image of the beam under test, or any low repetition pulsed laser, requires a camera based beam profiling system. The assistance of knowledgeable product specialists is required to provide analysis of the measurement requirements of your laser application as well as to describe the features and benefits of available products.

Slit-based Beam Profiler Camera-based Beam Profiler

3.1.2 Beam Profiler Finder

Finding the proper beam profiler and associated accessories to meet your beam profiling needs has never been easier. With our Beam Profiler Finder program just enter your laser parameters and the proper profilers for your application along with recommended accessories will be displayed on the screen. The program calculates the power and energy density capabilities of components, based on the laser wavelength, pulse length, repetition rate and other relevant parameters. It also compares all the other requirements such as the required aperture at every point based on the beam size, maximum and minimum power, energy etc.
In addition to finding the right profiler solution for your application, the Beam Profiler Finder Program offers the following features:

- E mailing of report
- Calculation of input power and energy density and average power
- Tips on further action if no solution is found

Order of Selection

The sensors are selected in terms of cost effectiveness and ease of use, i.e.cost of the total solution balanced against ease of use and quality of profile.

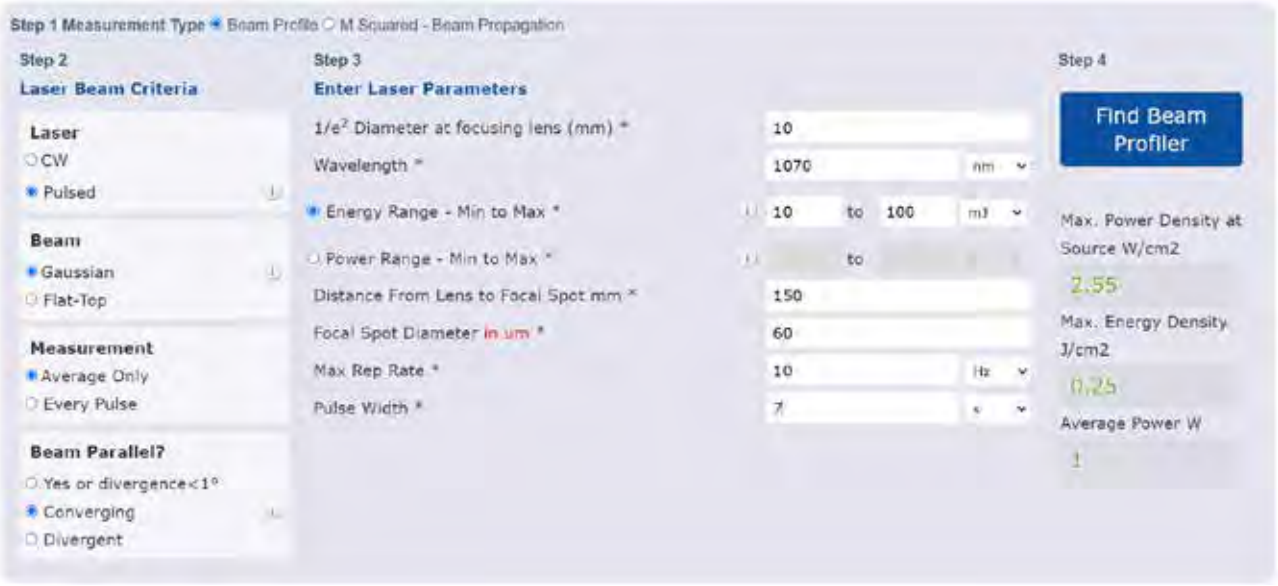
Aperture

Since it is not practical to allow the beam to fill the entire aperture, the sensors are selected so that the sensor aperture is always at least 2mm or 10% larger than the beam and in the case of a Gaussian beam, 1.5 times the Gaussian beam diameter to insure that 99% of the beam is inside the aperture. If the beam is rectangular its corners may touch the aperture. The aperture is checked all along the beam path from the attenuators thru the beam expander / reducer and thru the camera.

Using the Beam Profiler Finder Program

The Beam Profiler Finder Program is available for use online on the Ophir website at the Beam Profiler section.

Beam Profiler Finder Input Screen



1. When the program is started, the above screen appears: In Step 1, Select Measurement type : “Beam Profile” or “M^2 - Beam Propagation”.
2. In Step 2 select the laser type [CW or pulsed], the beam type [flat top or Gaussian and if flat top, circular or rectangular] and whether the beam is parallel, converging or diverging. If converging and you intend to measure the focal spot, you must input the beam size at the focusing lens and the distance from the lens to the focal spot. Note that a divergent beam is one typically from a LED or VECSEL. Enter No if the beam is slightly divergent but basically parallel. Also, if the beam profiler cannot be inserted close to the focusing lens, enter the distance from nearest practical approach and the beam diameter at that point.
3. In Step 3, Enter the required laser parameters: beam diameter, wavelength, max/min power or max/min energy, rep rate and pulse width. If minimum power / energy is not entered, then the program assumes the minimum is 1/2 of the maximum.
4. In Step 4 click “Find Beam Profiler”.

4. The combination of beam profilers and accessories that meet specified criteria will be listed in the output screen shown below. The input parameters are listed on top.
5. If you click on the light blue tinted items in the output, you will be sent to the appropriate web page on that item.
6. To email the results, fill in your email and click Email.

Beam Profiler Finder Output Screen

Power/Energy Sensors
In order to find a compatible power/energy sensor for your application, click on “here”.

Beam Propagation - M^2
M Squared option enables user to choose equipment capable beam propagation analysis, including Beam Watch or BeamSquared and wide selection of lens to optimize measurement and provide accurate results.

Beam Profiler Finder Input Screen

You can get more out of your laser

- Figure 1 shows an industrial Nd: YAG laser, near Gaussian beam, with 100 Watts output power and 1.5kW/cm^2 power density. Figure 2 is the same Nd: YAG beam at greater power, 170 Watts, but it split into 2 peaks producing only 1.3kW/cm^2 power density. The power density of the beam decreased 13% instead of increasing by the 70% expected. Without measuring the beam profile and beam width, you would not know what happened to your power density, and why the performance did not improve.

Laser cavities become misaligned

- Figures 3 & 4 are beam profiles of CO_2 lasers used for ceramic wafer scribing in the same shop. The second laser with the highly structured beam produced mostly scrap parts, until the laser cavity was aligned.

Off axis delivery optics

- Figures 5 & 6 show an industrial Nd:YAG laser with misaligned turning mirror, before and after adjustment.

Alignment of devices to lenses

- Figures 7 & 8 show beam profiles during alignment of a collimating lens to a laser diode. The first profile shows poor alignment of the lens to the diode, which can easily be improved when seeing the profile in real time.

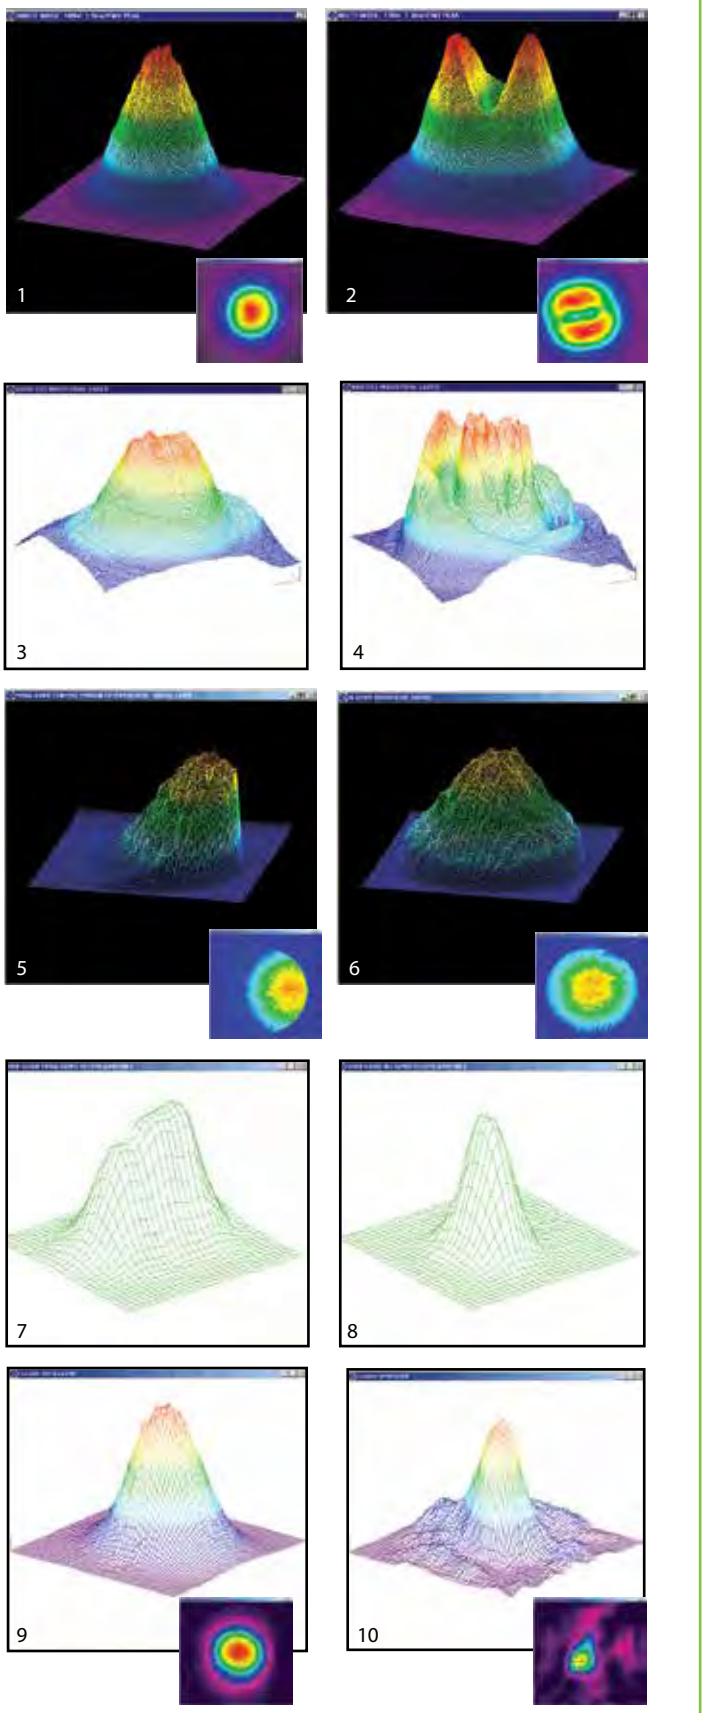
Laser amplifier tuning

- Figures 9 & 10 show a Cr:LiSAF femtosecond laser oscillator beam with a near Gaussian output, and what happens to the oscillator beam with poor input alignment.

All these examples illustrate the need for beam monitoring

- If the beam has problems, you must (or should) measure the beam and you must (or should) see the profile of the beam to make corrections.
- Most laser processes can be improved
- Scientific experiments can be more accurate
- Commercial instruments can be better aligned
- Military devices can have greater effectiveness
- Industrial processing produces less scrap
- Medical applications are more precise

Just knowing the beam profile can make the difference between success and failure of a process.



Beam Attenuating Accessories

A camera-based beam profiler system consists of a camera, profiler software and a beam attenuation accessory. Spiricon offers the broadest range of cameras in the market to cope with wavelengths from 13nm, extreme UV, to 3000 µm, in the long infrared. Both USB and GigE interfaces are available for most wavelength ranges providing flexibility for either laptop or desktop computers.

BeamGage®, the profiling software, comes in two versions: Standard and Professional. Each builds off of the next adding additional capability and flexibility needed for adapting to almost any configuration requirement.
Spiricon also has the most extensive array of accessories for beam profiling. There are components for attenuating, filtering, beam splitting, magnifying, reducing and wavelength conversion. There are components for wavelengths from the deep UV to CO_2 wavelengths. Most of the components are modular so they can be mixed and matched with each other to solve almost any beam profiling requirement needed.

Acquisition and Analysis Software

The BeamGage software is written specifically for Microsoft Windows operating systems and takes full advantage of the ribbon-base, multi-window environment. The software performs rigorous data analyses on the same parameters, in accordance with the ISO standards, providing quantitative measurement of numerous beam spatial characteristics. Pass/Fail limit analysis for each of these parameters can be also applied.

- ISO Standard Beam Parameters
- Dslit, Denergy, D4σ
- Centroid and Peak location
- Major and Minor Axis
- Ellipticity, Eccentricity
- Beam Rotation
- Gaussian Fit
- Flat-top analysis / Uniformity
- Divergence
- Pointing stability

For data display and visualization, the user can arrange and size multiple windows as required. These may contain, for example, live video, 2D Topographic and 3D views, calculated beam parameters and summary statistics in tabular form with Pass/Fail limit analysis, and graphical strip chart time displays with summary statistics and overlays. Custom configured instrument screens with multiple views can be saved as configuration files for repeated use. Data can be exported to spreadsheets, math, process/ instrumentation and statistical analysis programs, and control programs by logging to files or COM ports, or by sharing using LabView or ActiveX Automation.

- Video Dual Aperture Profiles
- Beam Statistics
- 3D Profile View
- 2D Topographic View
- Time Statistics Charts
- Pointing / Targeting
- Hide measurements and features not in use for user simplicity
- Notes

3.3.1 BeamGage®-Standard Version

- Extensive set of ISO quantitative measurements
- Patented Ultracal™ algorithm for highest accuracy measurements in the industry
- Customizable user interface for 'ease of use'
- Auto-setup and Auto-exposure capabilities for fast set-up and optimized accuracy
- Statistical analysis on all calculated results displayed in real time
- New BeamMaker® beam simulator for algorithm self-validation

The performance of today's laser systems can strongly affect the success of demanding, modern laser applications.

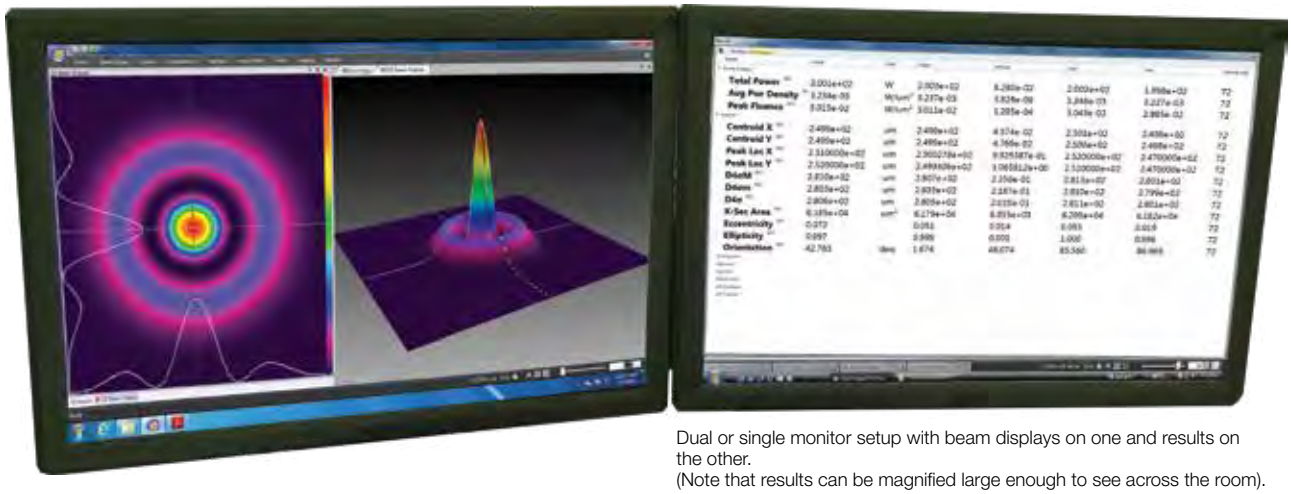
The beam's size, shape, uniformity or approximation to the expected power distribution, as well as its divergence and mode content can make or break an application. Accurate knowledge of these parameters is essential to the success of any laser-based endeavor. As laser applications push the boundaries of laser performance it is becoming more critical to understand the operating criteria.

For over thirty years Ophir-Spiricon has developed instruments to accurately measure critical laser parameters. Our LBA and BeamStar software have led the way. Now with the introduction of BeamGage, Ophir-Spiricon offers the first "new from the ground up" beam profile analysis instrument the industry has experienced in over 10 years.

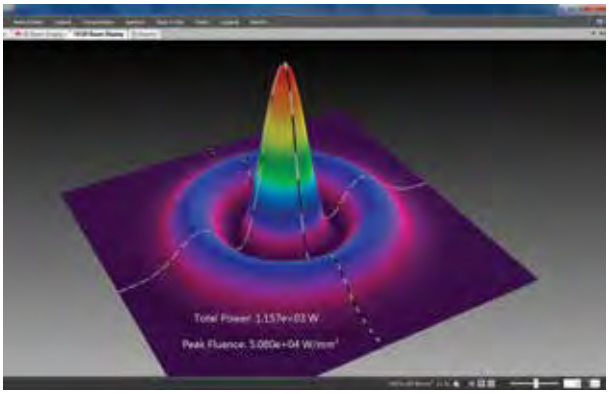
BeamGage includes all of the accuracy and ISO approved quantitative results that made our LBA software so successful. BeamGage also brings the ease-of-use that has made our BeamStar software so popular. Our patented UltraCal algorithm, guarantees the data baseline or "zero-reference point" is accurate to 1/10 of a digital count on a pixel-by-pixel basis. ISO 11146 requires that a baseline correction algorithm be used to improve the accuracy of beam width measurements. UltraCal has been enhanced in BeamGage to assure that accurate spatial measurements are now more quickly available.

See Your Beam As Never Before:

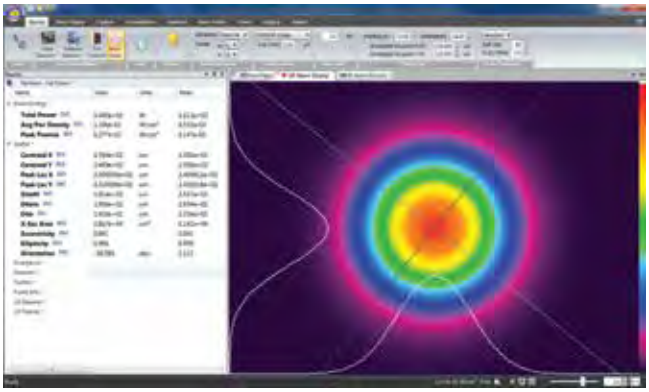
The Graphical User Interface (GUI) of BeamGage is new. Dockable and floatable windows plus concealable ribbon tool bars empowers the BeamGage user to make the most of a small laptop display or a large, multi-monitor desktop PC.



Dual or single monitor setup with beam displays on one and results on the other.
(Note that results can be magnified large enough to see across the room).

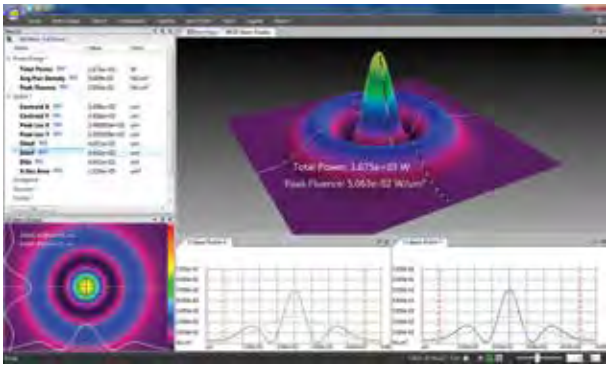


Beam only (Note results overlaid on beam profile).



Beam plus results

- 3D displays Rotate & Tilt. All displays Pan, Zoom, Translate & Z axis Zoom



Multiple beam and results windows.
(Note quantified profile results on 3D display & quantified 2D slices).

Ultracal: Essential, or no big deal?

If you want accurate beam measurements, you want Ultracal.

What is Ultracal?

Our patented, baseline correction algorithm helped establish the ISO 11146-3 standard for beam measurement accuracy. The problems with cameras used in beam profile measurements are: a) The baseline, or zero, of the cameras will drift with time and temperature changes, and b) include random noise. Ultracal is the only beam profiler algorithm that sets the baseline to “zero”, and, in the center of the noise. (Competitive products use other less sophisticated algorithms that perform a baseline subtraction, but truncate the noise below the “zero” of the baseline. This leaves only a “positive” component, which adds a net value to all beam measurements).

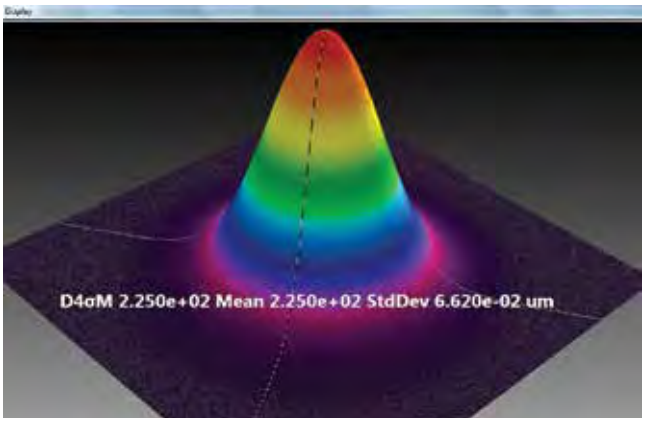
Try the following on any other beam profiler product to see the inherent error if you don’t use Ultracal.

1. Measure a beam with full intensity on the profiler camera.

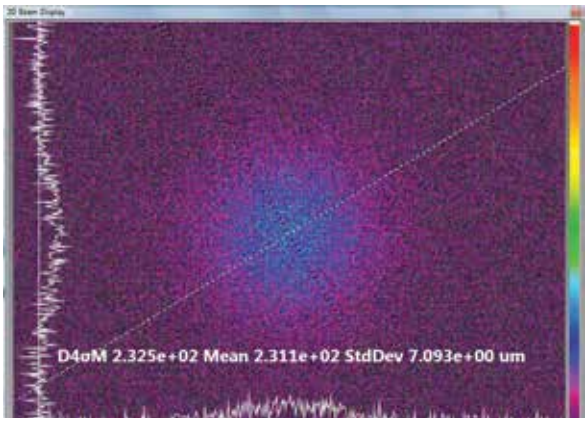
2. 0Insert a ND2 filter (100X attenuation) into the beam and measure it again.

3. Compare the results.

4. The Standard Deviation below is about 3%, which is phenomenal compared to the 100% or more of any beam profiler without Ultracal.



Beam at full intensity, Width 225µm, Std Dev 0.06µm



Beam attenuated 100X (displayed here in 2D at 16X magnitude zoom), Width 231µm, Std Dev 7µm

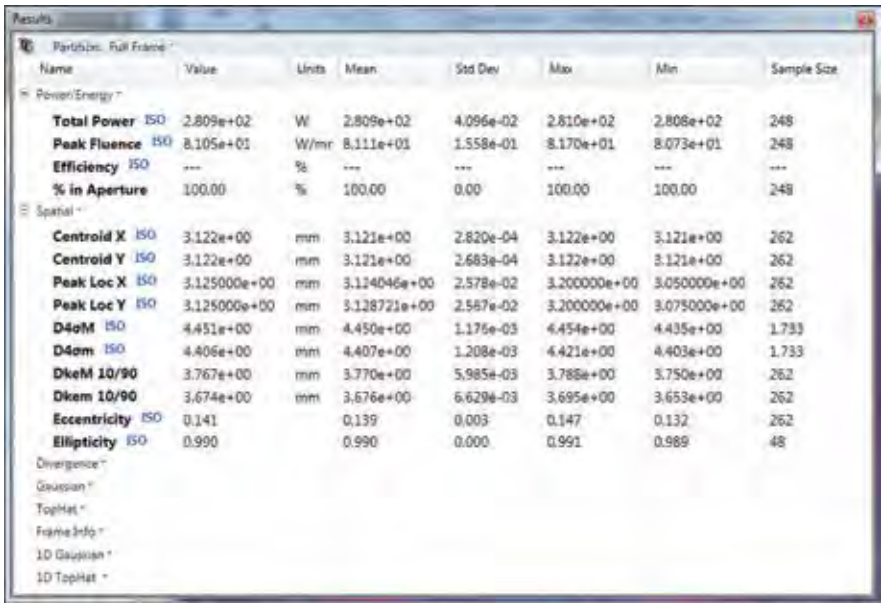
Adding the use of Automatic Aperture improves the accuracy to 1%. (The conditions of this measurement is a camera with a 50dB SNR).

5. You normally don’t make measurements at such a low intensity. But occasionally you may have a drop in intensity of your beam and don’t want to have to adjust the attenuation. Or, you may occasionally have a very small beam of only a few tens of pixels. In both of these cases, Ultracal becomes essential in obtaining accurate measurements.

Beam Measurements and Statistics

BeamGage allows you to configure as many measurements as needed to support your work, and comes standard with over 55 separate measurement choices. To distinguish between calculations that are based on ISO standards and those that are not, a graphical ISO logo is displayed next to appropriate measurements. You can also choose to perform statistical calculations on any parameter in the list.

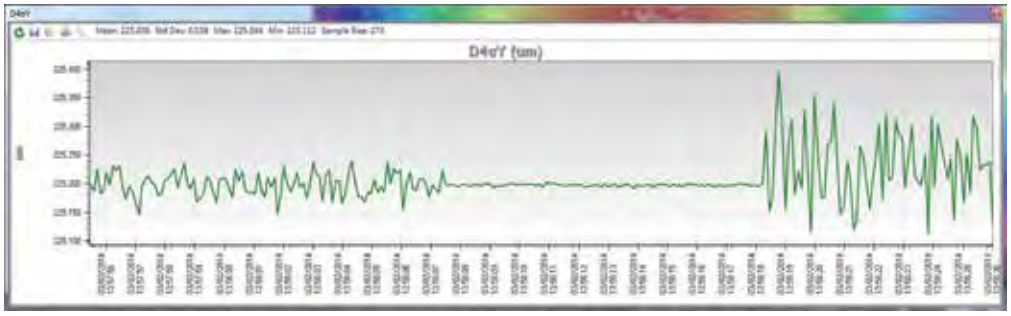
Small sample of possible measurements out of a list of 55



Sample of calculation results with statistics applied

Multiple Charting Options

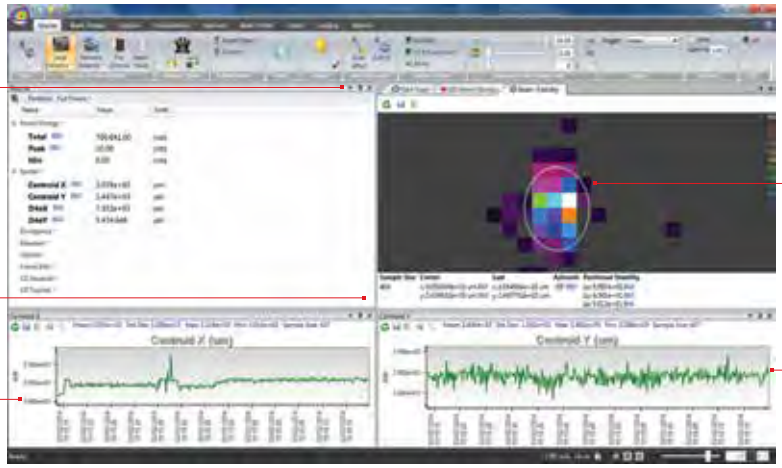
You can create strip charts for stability observations on practically any of the calculations options available. Charts enable tracking of short or long term stability of your laser.



Strip chart of beam D4sigma width. Note how changing conditions affects the width repeatability.
Beam intensity changed over 10db, making noise a significant factor in measurement stability.

Beam Pointing Stability

Open the Pointing Stability Window to collect centroid and peak data from the core system and display it graphically. View a chart recorder and statistical functions in one interface:



Peak location scatter plot with histogram color-coding.

Set a sample limit, and specify the results items to graph on the strip chart.

The radius is referenced from either an Origin established in BeamGage or from the continuously calculated Average Centroid position.

A centroid location scatter plot with histogram color-coding.

A pointing stability strip chart presents data over time for the Centroid X and Y, Peak X and Y and centroid radius from an origin or from the mean centroid.

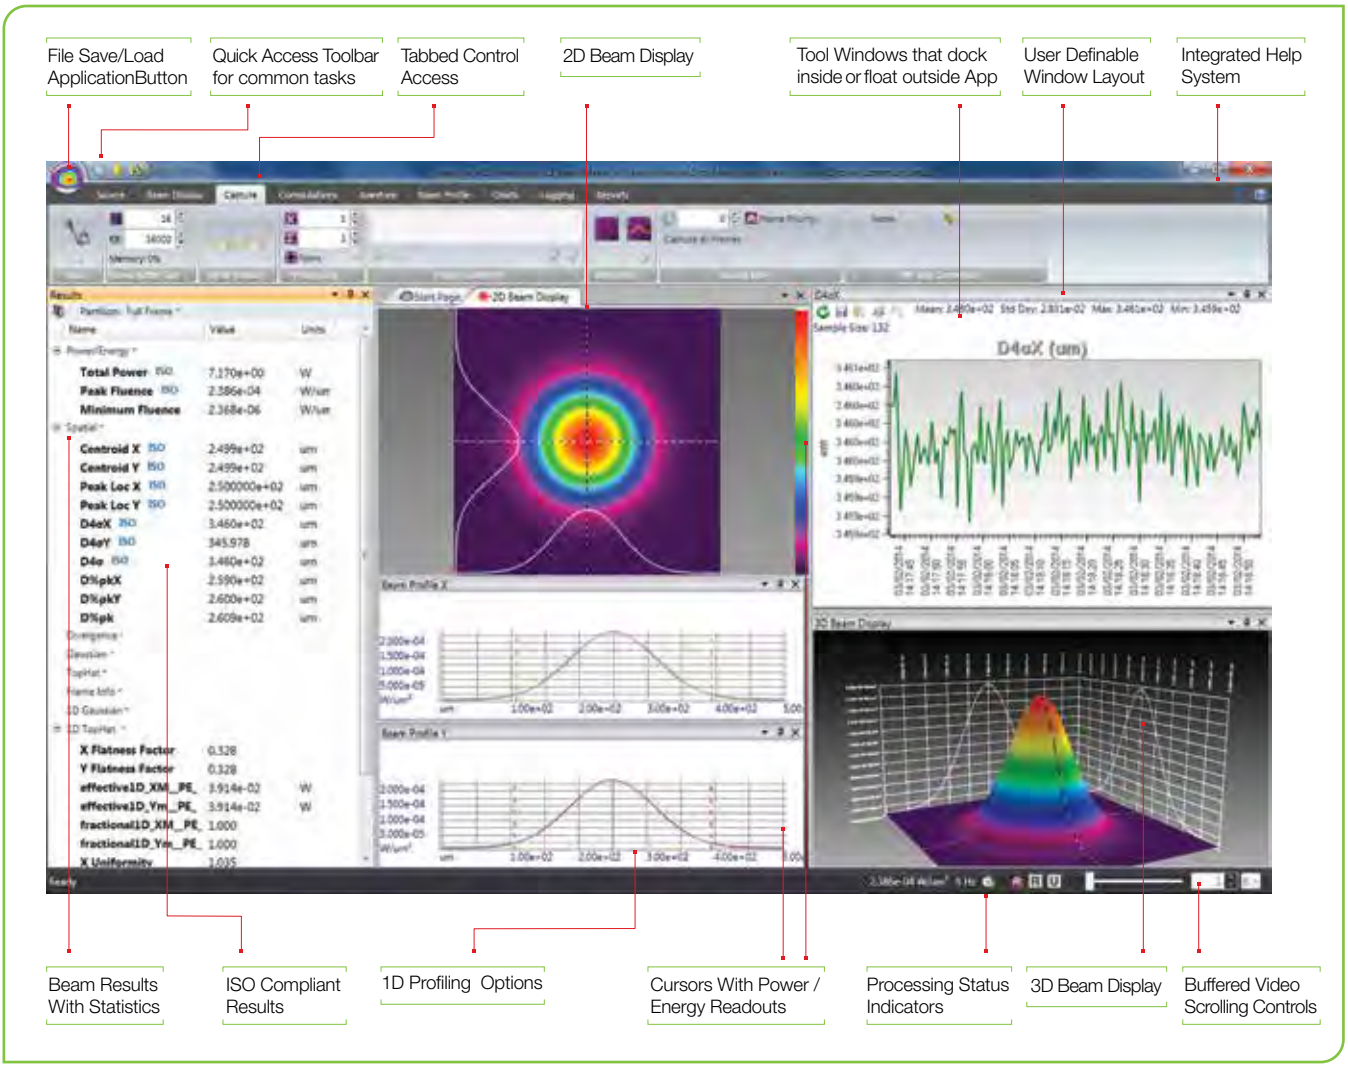
Easy to Use and Powerful

BeamGage is the only beam profiler on the market using modern Windows 7 navigation tools. The menu system of BeamGage is easy to learn and easy to use with most controls only one mouse click away. Some ribbon toolbar examples:

Some of the Beam Display options (Display access options under the Tools tab on the left).

Some of the Beam Capture options.

BeamGage Main Display Screen



Pass / Fail with Password Protection for Production Testing

BeamGage allows the user to configure the displayed calculations; set-up the screen layout and password protect the configuration from any changes. This permits secure product testing as well as data collection for Statistical Process Control (SPC), all while assuring the validity of the data.

Name	Value	Mean	Std Dev	Max	Min	Units
Power/Energy *						
Spatial *						
Centroid X ISO	7.831e+01	7.831e+01	2.849e-03	7.832e+01	7.830e+01	um
Centroid Y ISO	7.965e+01	7.965e+01	3.047e-03	7.966e+01	7.964e+01	um
Peak Loc X ISO	7.000000e+01	7.073199e+01	1.340173e+0	7.500000e+01	6.700000e+01	um
Peak Loc Y ISO	7.100000e+01	7.183659e+01	1.333245e+0	7.500000e+01	6.800000e+01	um
D4σX ISO	1.238e+02	1.238e+02	8.334e-03	1.239e+02	1.238e+02	um
D4σY ISO	124.041	124.053	0.008	124.079	124.027	um
D4σ ISO	1.239e+02	1.239e+02	6.395e-03	1.240e+02	1.239e+02	um

Failures (or successes) can be the impetus for additional actions including a TTL output signal or PC beep and the termination of further data acquisition.

Unique Features of BeamGage - Standard

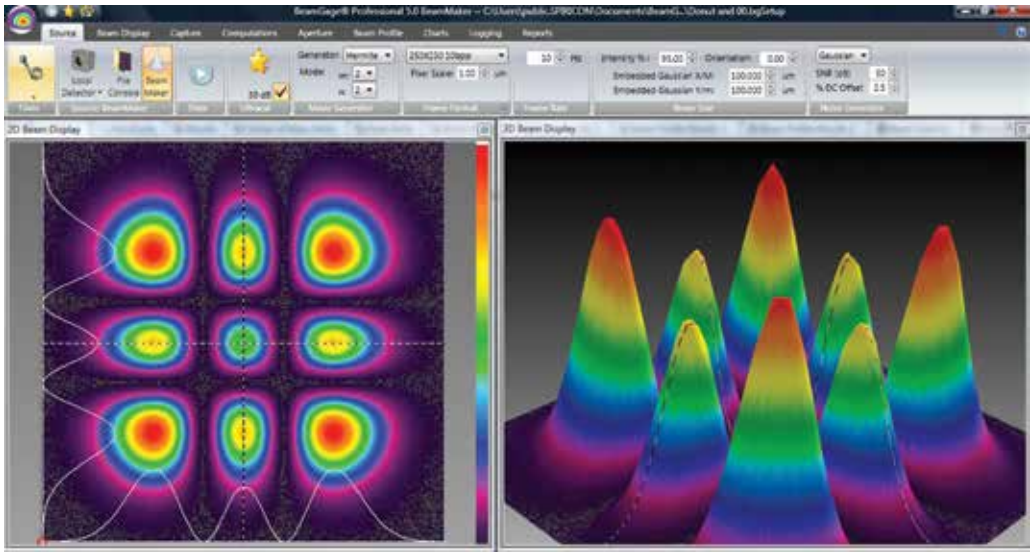
Power/Energy Calibration

Using the USB or GigE output from select Ophir power/energy meters, the BeamGage application will display measured power/energy values from the full range of Ophir thermopile, photodiode and pyroelectric sensors. Pulsed lasers can be synced up to 100Hz, or the frame rate of the triggered camera, whichever is less. This is the first time in the industry a laser power meter has been married to a laser beam profile system.

BeamGage is the only product to integrate profiling and power meter measurements

BeamMaker®; Numerical Beam Profile Generator

BeamGage contains a utility, BeamMaker, that can synthetically generate beam profile data by modeling either Laguerre, Hermite or donut laser beams in various modal configurations. BeamMaker permits the user to model a beam profile by specifying the mode, size, width, height, intensity, angle, and noise content. Once generated the user can then compare the theoretically derived measurements to measurements including experimental inaccuracies produced by the various measurement instruments and environmental test conditions. Users can now analyze expected results and confirm if measurement algorithms will accurately measure the beam even before the experiment is constructed. BeamMaker can help laser engineers, technicians and researchers understand a beam's modal content by calculating results on modeled beams for a better understanding of real laser beam profiles. BeamMaker is to laser beam analysis as a function generator is to an oscilloscope.



BeamMaker producing a synthetically generated Hermite TEM_{22} beam and displayed in both 2D and 3D

Integrated automatic Help linked into the Users Guide

Touch sensitive Tool tips are available on most all controls, and "What's This" help can provide additional details. Confused about what something is or forgot how it works, just go to the top right corner and touch the "What's This" help icon, then click on the control or menu item that you want more info about and you are taken to the explanation within the BeamGage Users Guide.

Multilingual

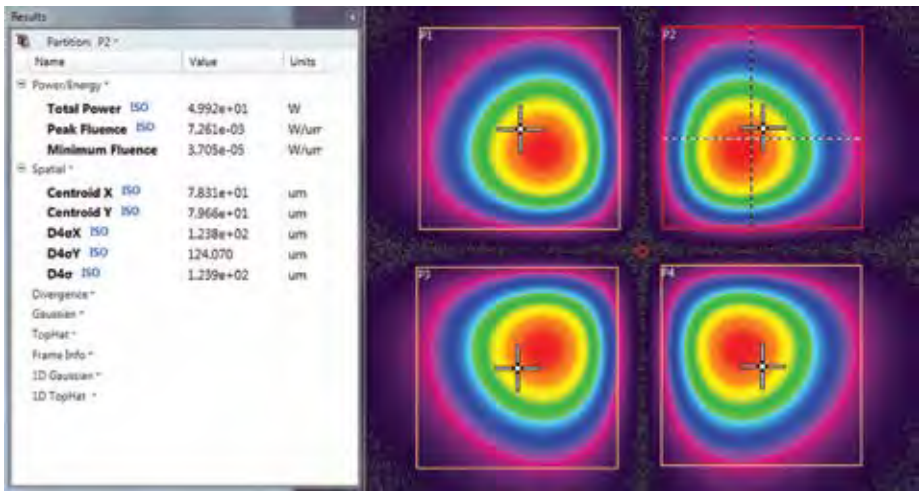
BeamGage comes with both Japanese and Chinese user interface. Country specific manuals can be downloaded from the ophiropt.com/photonics web site.

3.3.2 BeamGage®-Professional Version

Professional is an upgrade version of BeamGage-Standard that has all of the BeamGage-Standard features plus additional functionality.

Image Partitioning

Partitioning allows the user to subdivide the camera image into separate regions, called partitions, and compute separate beam results within each partition. When using partitioning special results items can be displayed that relate to delta values between the computed centroids or peaks of each partition. Partitioning is useful to enable separate analysis of individual beams when multiple beams impinge on the camera simultaneously. This feature is particularly useful when analyzing multiple fibers in a single bundle.



Shown is an example of the results for partition P2 and its related display frame. Observe that the selected partition is highlighted in RED. The crosshair in each partition is user controlled. The crosshair can be moved to a new position with the mouse or can be numerically positioned using the expanded controls that appear when a partition is created.

Automation Interface

BeamGage Professional provides an automation interface via .NET components to allow customers the ability to build custom applications' that incorporate the laser beam analysis and processing power of BeamGage. The BeamGage automation interface allows developers to control BeamGage programmatically via a set of "puppet strings" known as the automation interface. The automation interface was developed to provide the ability to base control decisions for a second application on results and behaviors recognized by BeamGage. With this ability users can quickly and efficiently meet their manufacturing/analysis goals with minimum human interaction.

The automation interface was designed to achieve two main goals. First, to allow the BeamGage user to programmatically do what they could otherwise do via the graphical user interface (GUI). Second, to expose stable interfaces to the user that will not change, causing breaks to their dependent code. Interface examples for LabVIEW, Excel and .NET VB are included.

Custom Calculations

If BeamGage-Standard does not have the measurement you need the Professional version permit the user to program-in their own set of calculations. User defined computations are treated the same as other BeamGage standard calculations.

These custom results are displayed on the monitor, logged with results, and included on hard copy print-outs as if they were part of the original application.

An example of a customer generated custom equation.

$$S = \frac{1}{\pi^2}\left|\int_0^{2\pi}\int_0^1 \exp(2\pi i \Delta W(\rho,\theta))\ \rho d\rho d\theta\right|^2$$

3.3.3 Software Comparison Chart

Features	BeamGage® Standard	Upgrade to BeamGage® Professional to include: (all features in Standard plus)
Features Overview	User selectable for either best “accuracy” or “ease of use”	
	Supports our patented Ultracal algorithm plus Auto-setup and Auto-exposure capabilities	
	Extensive set of ISO quantitative measurements	
	Support for USB, GigE and Pyrocam™ IIIHR and Pyrocam™ IV cameras	Supports InGaAs and large format L11059 cameras
	New Beam Maker® beam simulator for algorithm self validation. See below for more detailed description	
	Simultaneous 2D and 3D displays	
	Multi-instance, multi-camera use	
	Results synchronized to select models of Ophir power/energy meters. Supported products include: Vega, Nova II, Pulsar and Juno, in both 32 and 64bit OS. (Quasar is not supported)	
	Supports Satellite windows on multiple monitors	
	Continuous zoom scaling in both 2D and 3D	
		Window partitioning to allow analysis of multiple beams from a single camera image
	Camera ROI support on USB and GigE cameras	
	Manual and Auto-aperturing to reduce background effects	
	Pass/Fail on all results items, w/multiple alarm options	
	Beam Pointing Stability scatter plot and stripchart results	
	Full featured logging capabilities in a reloadable industry standard data file format	
	Configurable Report Generator that allows cut and paste of results, images and settings	
		NET Automation interface that allows for remote control. Examples in LabView, Excel and .Net VB
	Supports English, German, Japanese and Chinese Windows 7 (64) and Windows 10	
	Multilingual GUI in English, Japanese and Chinese	
	Administrator can lock software options for non-administrators	
Quantitative Calculations; Basic Results	(per ISO 11145, 11146-1/-3, and 13694)	
Power/Energy Results	Total power or energy (Can be calibrated or sync’d to an external Ophir power/energy meter)	
	Peak power/energy density	
	Min. Fluence	
	Average pulse power	
	Peak pulse power	
	Device efficiency	
	% in Aperture	
Spatial Results	Peak and Centroid locations	
	Beam width	
	• Second Moment (D4s)	
	• Knife Edge 90/10	
	• Knife Edge (User selectable level)	
	• Percent of Peak (User selectable)	
	•Percent of Total Energy (User selectable)	
	• Encircled power smallest slit @ 95.4	
	•Moving slit (User selectable)	
	Beam diameter	
	• Average diameter (based on x/y widths)	
	•Second Moment (D4s)	
	• Encircled power smallest aperture 86.5	
	• Encircled power smallest aperture (User selectable level)	
	Elliptical Results	
	• Elliptical orientation	
	• Ellipticity	
	• Eccentricity	
	Distance Measurement	
	• Cursor to Crosshair	
	• Centroid to Crosshair	
	Area Results	
	Beam cross-sectional area	

Features	BeamGage® Standard	Upgrade to BeamGage® Professional to include: (all features in Standard plus)
Divergence	Focal Length method	
	Far-field two-point method	
	Far-field Wide Angle method	
Gaussian Fit	2D whole beam fits	
	1D line fits	
	Height	
	Width X/Y	
	Centroid	
	Goodness of fit	
	Roughness of fit

	• Sample/Time controlled	
	• Pass/Fail limits	
	• Auto scaling	
	• Beam Width/Diameter Strip Charts with Results	
	• X/Y M/m beam widths plots	
	• Beam Diameter plot	
	• Mean/Std Dev/Min/Max results displayed	
	• Power/Energy Strip Charts	
	• Total Power/Energy plot	
	• Peak fluence plot	
	• Avg Power plot	
	• Elliptical Results Strip Chart	
	• Elliptical orientation plot	
	• Ellipticity plot	
	• Eccentricity plot	
	• Mean/Std Dev/Min/Max results displayed	
Custom Calculations		User can program-in own set of calculations
Beam Profile Display Options	Utilizes advanced hardware accelerated graphics engines. All display windows can be satellited to utilize multiple display monitors.	
	Can open one each simultaneous 2D and 3D beam display windows	
	Common color palette for 2D and 3D displays	
	Can open X and/or Y 1D beam slice profiles overlaid onto the 2D or 3D displays or in separate windows	
	Continuous software zooming in both 1D, 2D and 3D displays	
	Pan to any detector location	
	Continuous Z axis display magnitude scaling	
	Multiple 128 color palettes user selectable	
	Results items can be pasted into 2D, 3D, 1D, Pointing stability or Chart display windows.	
		Able to partition the camera imager into multiple regions with separate results.

Features	BeamGage® Standard	Upgrade to BeamGage® Professional to include: (all features in Standard plus)
1D Features	Available overlaid with 2D and 3D or in separate windows	
	X any Y plots on separate or combined displays	
	1D displays with basic results and column row summing option	
	Tophat 1D displays with Tophat results	
	Gaussian 1D displays with Gaussian fit results	
	1D Profile display of the Gauss fit results on 1D, 2D and 3D displays	
2D Features	Continuously zoomable and resizable displays in satellitable window	
	Continuous Z axis display magnitude scaling	
	Zoomable to subpixel resolution for origin and cursor placements	
	Pixel boundaries delineated at higher zoom magnifications	
	Adjustable Cursors that can track peak or centroid	
	Adjustable Crosshairs that can track peak or centroid	
	Adjustable manual apertures	
	Viewable Auto-aperture placement	
	Displayed beam width marker	
	Integrated Mouse actuated pan/zoom controls	
	Separate 2D pan/zoom window to show current view in 2D beam display	
	Manual or fixed origin placement	
		Ability to create partitions using the manual aperture controls
3D Features	3D graphics utilize solid surface construction with lighting and shading effects	
	Integrated Mouse actuated pan/zoom/tilt/rotate controls	
	Selectable Mesh for drawing speed vs resolution control	
	Continuously zoomable and resizable displays in satellitable window	
	Continuous Z axis display magnitude scaling	
	User enabled backplanes with cursor projections	
Partitioning		Users can subdivide the imager into separate beam measurement regions. All enabled results are computed inside of each partition
		The manual aperture is used to define and create rectangular partition
		When partitioning is enabled some new results items will be enabled
		Centroid measurements between beams in each partition can be performed
		Partitioned imagers must have a single origin common to all partitions. All coordinate results are globally referenced to this single origin
Statistical Analysis	Performed on all measurement functions with on-screen display	
	• Choices of intervals	
	• Manual start/stop	
	• Time from 1 second to 1000 hours	
	• Frames from 2 to 99,999 Measurements reported	
	• Current frame data, Mean, Standard Deviation, Minimum, Maximum of each calculation performed	
	Controls integrated with beam stability results, scatter and strip chart plots	
File types	Industry Standard HDF5 data and setup file format which are compatible in third party applications such as MatLab and Mathmatica	
	Math program and Excel compatible ASCII-csv results files	
	Graphics in jpg file format	
	Legacy file Compatibility with LBA formats	
	A user defined single file output that can contain settings, beam displays, beam profiles, charts, results, etc. in either .pdf or .xps file formats	
Printing	Images, reports, results, graphs, charts, statistics and setup information	
	Option to print many frames in a single operation	
	WYSIWYG images	
Pass/Fail	Set Maximum/Minimum limits on all calculations and statistics	
	Red/Green font color indication on result items	
	Multiple choices for indication of failed parameters, including TTL pulse for external alarm	
	Master pass/fail which triggers alarm on any failure	
	USB/GigE signal, beep, stop, and log alarm options	

Features	BeamGage® Standard	Upgrade to BeamGage® Professional to include: (all features in Standard plus)
Logging	Video Data Logging Formats: HDF5, ASCII-csv	
	Results in ASCII-csv	
	Pictures 2D and 3D in jpg, gif, tiff, bmp, png file formats	
	Charts in ASCII-csv	
	Cursor Data in ASCII-csv	
	Row/Column summed in ASCII-csv	
	Continuous Logging	
	Time Interval Logging	
	Frame Count Logging	
	Periodic Sampling	
	Pass/Fail Sampling	
	Burst Sampling, after a user specified time interval, sample a user specified number of frames	
Exporting	Convert frame buffer data to third party format	
	Export a user specified number of frames from the buffer	
	Export Image Data: ASCII-cvs	
	Export Results: ASCII-csv	
	Export Picture: jpg, gif, tiff, bmp, png file formats supported	
	Export Cursor Data: ASCII-cvs	
	Export Row/Column summed: ASCII-cvs	
	Export Image Data in Aperture	
Automation Interface (.NET)		Automation Interface with examples in LabVIEW, Excel and Net VB
		Automate launch and termination of the application
		Automate start, stop, Ultracal, Auto-X and Auto Setup
		Automate the loading of application setups
		Automate control of most camera settings
		Automate a subset of the application features and controls
		Automate the capture of Binary Video Data
		Automate the acquisition of application results
		Automate the acquisition of application Images
Integrated Help	PDF Operators Manual	
	Context Sensitive (Whats this?) Help	
	Context Sensitive Hints	
Signal Conditioning for Enhanced Accuracy	Spiricon's patented Ultracal enables more accurate beam measurement and display. Ultracal takes a multi- frame average of the baseline offset of each individual pixel to obtain a baseline accurate to approximately 1/8 of a digital count. This baseline offset is subtracted from each frame, pixel by pixel, to obtain a baseline correction accurate to 1/8 digital count. Spiricon's Ultracal method retains numbers less than zero that result from noise when the baseline is subtracted. Retaining fractional and negative numbers in the processed signal can increase the beam width measurement accuracy by up to 10X over conventional baseline subtraction and clip level methods. Spiricon's Ultracal conforms to the best method described in ISO 11146-3:2004	
Frame Averaging	Up to 256 frames can be averaged for a signal-to-noise ratio, S/N, improvement of up to 16X (Noise is averaged up to 1/256th [8 fractional bits]). Data is processed and stored in a 32bit format	
Frame Summing	Up to 256 frames can be summed to pull very weak signals out of the noise	
	Due to the precise nature of Ultracal baseline setting, (i.e., a retention of both positive and negative noise components) summing of frames can be performed without generating a large offset in the baseline	
Convolution (Adjacent Pixel Averaging)	Choice of 5 convolution algorithms for spatial filtering for both display and calculations. Spatial filtering improves the visual S/N	
Beam Maker®	Beam Maker is a new feature that allows the user to model both Laguerre-Gaussian and Hermite-Gaussian laser beams in various modal configurations. With these models you have verification and validation tools that allows not only OSI but also the end user to verify BeamGage's basic beam width measurement algorithms. It can also be used to model laser beams with special input conditions such as signal-to-noise, background offset, and bits per pixel resolution. This allows the user to better understand the accuracy of measurements made under both optimum and adverse conditions. This tool provides the user with a method to validate algorithms against current ISO standards and methods. It can also be used to validate third party algorithms by making the output data available for use in third party applications	

Features	BeamGage® Standard	Upgrade to BeamGage® Professional to include: (all features in Standard plus)
Camera Features	Camera features are governed by the capabilities of the various cameras that will interface with these software products, and second by which of these camera features are implemented in the software. This section will describe typical camera features supported in the application	
	Black Level Control (used by Ultracal and Auto-X and Auto-setup)	
	Gain Control (used by Auto-X and Auto-setup)	
	Exposure Control (used by Auto-X and Auto-setup)	
	User Programmable ROI	
	Pixel Binning	
	Pixel Sampling	
	Bits per pixel setting	
	External Trigger Input	
	Trigger Delay	
	Strobe Output	
	Strobe Delay	
	External Trigger Probe	
	Internal Trigger Probe	
Camera related features in the applications	These are features related to but not generally dependent upon the camera design	
	Gamma Correction	
	Gain Correction	
	Bad Pixel Correction	
	Lens Applied Option	
	Pixel scale settings	
	Magnification settings	
	Frame buffer settings	
	Ultracal	
	Enable Auto-X (auto exposure control)	
	Perform an Auto-Setup	
	8/10/12/14/16 bits per pixel	
	Select Format or ROI	
	Measure S/N ratio	
Trigger, Capture and Synchronization Methods	Capture methods are features related to the application while Synchronization methods relate more to the abilities of the specific camera. NOTE: Frame capture rates are determined by many factors and are not guaranteed for any specific operating configuration	
	Trigger modes	
	• CW - captures continuously, see Capture Options below	
	• Trigger-In from laser: Trigger pulses supplied to the camera	
	• Strobe-Out to laser: Strobe pulses output from the camera	
	• Video Trigger: Frame captured and displayed only when the camera sees a signal greater than a user set level	
	Capture options	
	• Capture options are redefined and are approached in a different manner than older products. The items listed below will allow for all of the previous methods but with more flexibility than ever before	
	• Results Priority: Results priority will slow the capture rate to be in sync with the computational results and display updates	
	• Frame Priority: Frame priority will slow results and display updating to insure that frames are collected and stored in the frame buffer as fast as possible (replaces block mode)	
	• Stop After: Will collect a set number of frames and then stop (replaces Single-Shot mode)	
	• Periodic: Will collect frame at a programmed periodic rate	
	• Periodic Burst: Will collect frames in a Burst at programmed periodic rates	
	• Post processing is still available but is done via a different mechanism and is limited to only data file sources	
Video Playback	Video playback, post processing and post analysis	
	User customizable playback rates	
	Video file quick pan/search controls	
	Whole video file playback looping with sub-selection looping	
	Playback Video produced by logging	
	Almost all measurements can be performed on video files	
System Requirements	PC computer running Windows 7 (64) and Windows 10 Laptop or Desktop	
	Not all cameras run in all Microsoft OS versions, see camera section for specifics	
	GHz Pentium style processor, dual core recommended	
	Minimum 2GB RAM (4GB required for L11059 camera)	Minimum 3-4GB RAM
	Accelerated Graphics Processor	
	Hard drive space suitable to hold the amount of video data you expect to store (50-100 GB recommended)	

Camera Compatibility

For lasers between 190-1100nm wavelengths, BeamGage interfaces to both silicon CCD and CMOS USB cameras. For applications between 1440-1605nm, BeamGage supports cost effective phosphor coated CCD cameras. For demanding applications between 900-1700nm, BeamGage supports an InGaAs camera. And for applications in the ultraviolet, 13-355nm, or far infrared or Terahertz range, 1.06-3000nm, BeamGage supports Spiricon's Pyrocam™, pyroelectric array cameras.

190-1100nm*

Model	SP932U
Application	1/1.8" format, slim profile, wide dynamic range, CW & pulsed lasers, adjustable ROI
Beam sizes	34.5µm - 5.3mm
Number of effective pixels	2048 x 1536
CMOS recess	4.5±0.11mm
PC interface	USB 3.0
Page in the catalog	194

Model	SP920s
Application	1/1.8" format, slim profile, wide dynamic range, CW & pulsed lasers, adjustable ROI
Beam sizes	44µm - 5.3mm
Number of effective pixels	1624 x 1224
CCD recess	4.5mm
PC interface	USB 3.0
Page in the catalog	195

Model	LT665	L11059
Application	12.5mm x 10mm, 1" format for large beams, CW & pulsed lasers, adjustable ROI	36mm x 24mm, 35mm format for large beams, CW & pulsed lasers, adjustable ROI
Beam sizes	46µm - 9.9mm	90µm - 24mm
Number of effective pixels	2752 x 2192	4008 x 2672
CCD recess	17.5mm	17.3mm
PC interface	USB 3.0	USB 2.0
Page in the catalog	196	196

1440-1605nm

Model	SP920s-1550	LT665-1550
Application	NIR wavelengths, 1/1.8" format, adjustable ROI and binning	12.5mm x 10mm, 1" format for large beams, CW & pulsed lasers, adjustable ROI
Beam sizes	600µm - 5.3mm	600µm - 9.9mm
Number of effective pixels	1624 x 1224	2752 x 2192
CCD recess	4.5 mm	17.5 mm
PC interface	USB 3.0	USB 3.0

3.3.4.1.1 USB Silicon CMOS Camera

SP932U high resolution

SP932U

Features

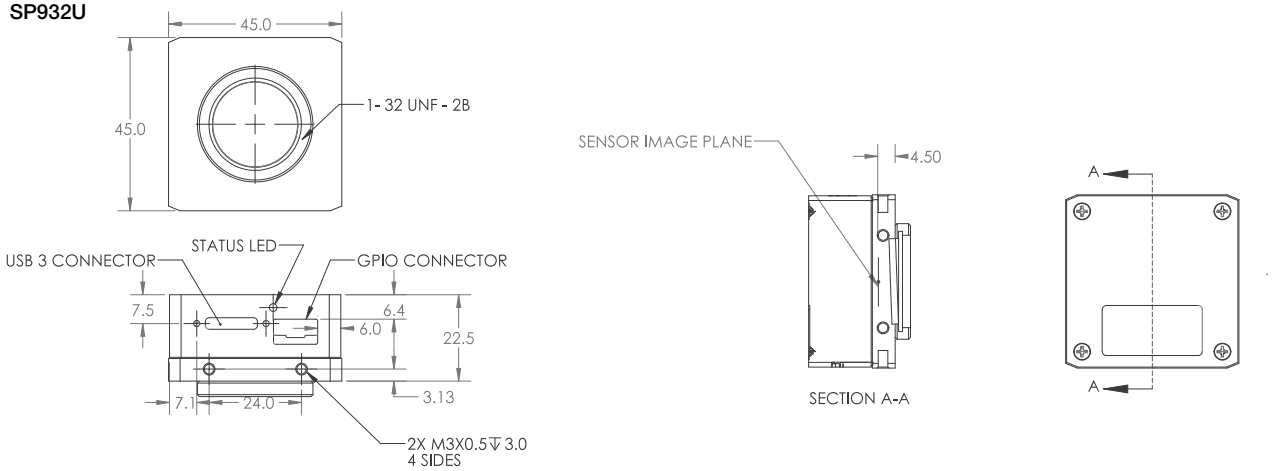
- Specially optimized for NIR and Nd:YAG regions via "Blooming Correction" algorithm
- 1/1.8" format CMOS global shutter imager
- Interface: USB3
- High Resolution 3.45µm pixel size
- 72dB true dynamic resolution, high bitrate
- No Smearing

Model	SP932U	
Format	1/1.8"	
Wavelengths (1)	190-1100nm	
Active area	7.06mm x 5.3mm	
Beam sizes	34.5µm - 5.3mm	
Pixel spacing	3.45µm x 3.45µm	
Number of effective pixels	2048 x 1536	
Dynamic range	72 dB	
Linearity with power	<1%	
Accuracy of beam width	±2%	
Frame rates in 12 bit mode (2)	24 fps at full resolution	
Exposure	25µs to 2000ms	
Gain control	1.46 dB to 256 dB	
Trigger	Hardware/Software Trigger & Strobe Out	
Photodiode trigger (Optional) (3)	Si response: SP90408	
Saturation intensity (4)	32µW/cm² at 633nm, 500µW/cm² at 1064nm	
Lowest measurable signal (4)	0.2nW/cm²	
Damage threshold (5)	50W/cm² / 1J/cm² for < 100ns pulse width	
Ambient operating temperature	0 - 50° C	
Dimensions	45 mm x 45 mm x 22.5 mm	
Imager recess	4.5±0.11mm	
Image quality at 1064nm	Pulsed with trigger sync - excellent Pulsed with video trigger - good CW - excellent	
Operation mode	CMOS, Global shutter	
PC interface	USB 3.0	
OS supported	Windows 10 (64), BeamGage 6.17 required	
Compliance	CE, UKCA, China RoHS	
Ordering Information		
Supported software	Item	P/N
BeamGage Professional	BGP-USB3-SP932U	**SP90607** (6)
BeamGage Standard	BGS-USB3-SP932U	**SP90606** (6)

Notes:

(1) The camera's natural response is from 300nm through 1100nm. At wavelengths above 1000 nm and BeamGage "Blooming correction" function needs to be activated. To measure effectively below 300nm, please make use of Ophir UV converter, otherwise the sensitivity is too low and the measurement accuracy may degrade. Without UV converter, long term intensive irradiation at UV wavelengths, may cause permanent damage to the imager due to UV ablation.
(2) Dependent on PC processor and graphics card performance. Frame rate is reduced when the Blooming Correction algorithm is active and can be increased using smaller aperture or the binning option.
(3) For more information please see "Optical Camera Trigger" catalog page
(4) Camera set to full resolution at maximum frame rate at 633nm and 1064nm wavelength. Camera set to minimum gain and 1ms exposure time for saturation test and 35ms exposure time for the lowest signal test.
(5) This is the damage threshold of the filter glass. Assuming all filters are mounted with ND1 (red housing) filter in the front. Distortion of the beam may occur with average power densities of 5W/cm² for beam size 5mm, 10W/cm² for 2mm beam, and >30W/cm² for 1mm beam.
(6) Comes with USB 3.0 cable, Trigger cable and 3 ND filters.

SP932U



SP920s high resolution

SP920s

Features

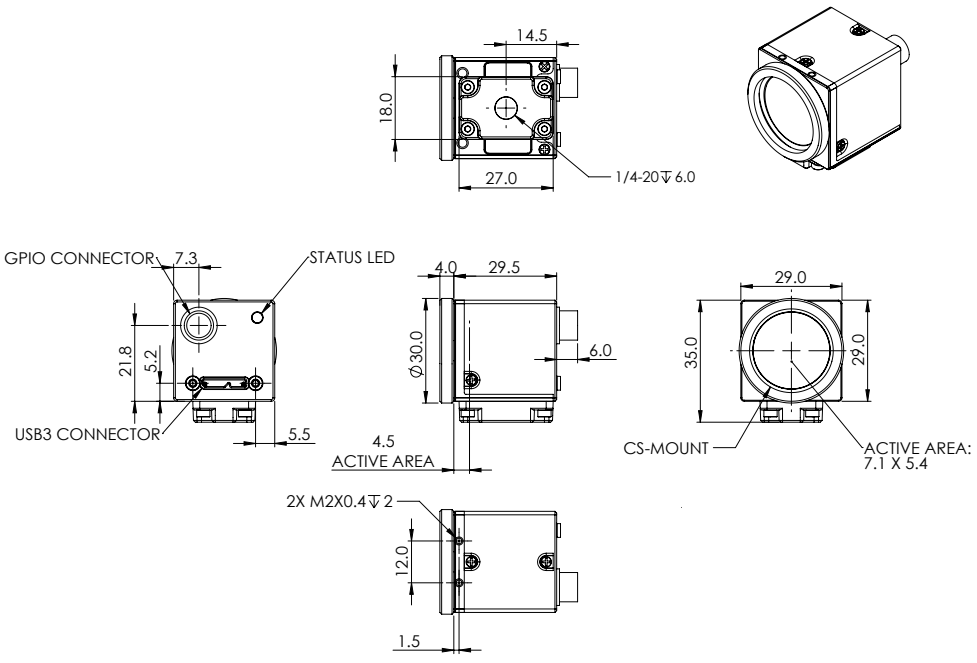
- 1/1.8” imager format
- USB Interface
- Small camera size
- >60dB true dynamic resolution

Model	SP920s	
Format	1/1.8”	
Wavelengths [1]	190 - 1100nm	
Active area	7.1mm x 5.3mm	
Beam sizes	44µm - 5.3mm	
Pixel spacing	4.4µm	
Number of effective pixels	1624 x 1224	
Dynamic range	60 dB	
Linearity with power	±1%	
Accuracy of beam width	±2%	
Frame rates in 12 bit mode [2]	15 fps at full resolution	
Shutter duration	70µs to multiple frames	
Gain control	0 dB to 24 dB	
Trigger	Hardware/Software trigger & strobe out	
Photodiode trigger (Optional) [3]	Si response: SP90408	
Saturation intensity [4]	32µW/cm^2	
Lowest measurable signal [4]	1nW/cm^2	
Damage threshold [5]	50W/cm^2 / 1J/cm^2 with all filters installed for < 100ns pulse width	
Ambient operating temperature	0 - 50° C	
Dimensions	29 mm x 29 mm x 29.5 mm	
CCD recess	4.5 mm	
Image quality at 1064nm	Pulsed with trigger sync - excellent Pulsed with video trigger - good CW - good	
Operation mode	Interline transfer C	
PC interface	USB 3.0	
OS supported	Windows 7 (64) and Windows 10	
Compliance	CE, UKCA, China RoHS	
Ordering Information		
Supported software	Item	P/N
BeamGage Professional	BGP-USB3-SP920s	**SP90550** [6]
BeamGage Standard	BGS-USB3-SP920s	**SP90549** [6]

Notes:

(1) The camera’s natural response is from 340nm through 1100nm. To measure effectively below 340nm, please make use of one of our UV converters. Otherwise the sensitivity is too low and the measurement accuracy may degrade. Without UV converter, long term intensive irradiation at UV wavelengths, may cause permanent damage to the imager due to UV ablation.
(2) Highly dependent on PC processor and graphics adapter performance.
(3) For more information please see “Optical Camera Trigger” catalog page
(4) Camera set to full resolution at maximum frame rate at 633nm CW wavelength. Camera set to minimum useful gain and 1ms exposure time for saturation test and maximum useful gain and 35ms exposure time for lowest signal test.
(5) This is the damage threshold of the filter glass of the filters. Assuming all filters mounted with ND1 (red housing) filter in the front. Distortion of the beam may occur with average power densities of 5W/cm^2 for beam size 5mm, 10W/cm^2 for 2mm beam and >30W/cm^2 for 1mm beam.
(6) Comes with USB 3.0 cable, Trigger cable and 3 ND filters.

SP920s



LT665

Features

- Large 1" imager format
- High resolution
- High speed
- 54dB true dynamic resolution

L11059

Features

- 35mm x 24mm imager format
- Highest resolution
- Programmable high speed electronic shutter
- 59dB true dynamic resolution

Comes with 3 ND filters: (ND1, ND2, ND3)
ND3 mounted in camera

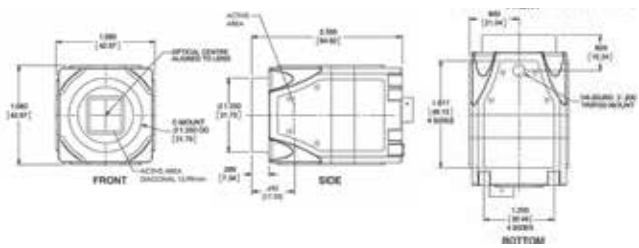
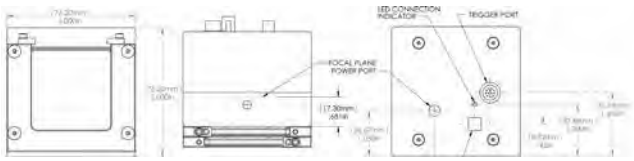
(8) Comes with USB A-B cable, Trigger cable and 3 ND filters.

LT665

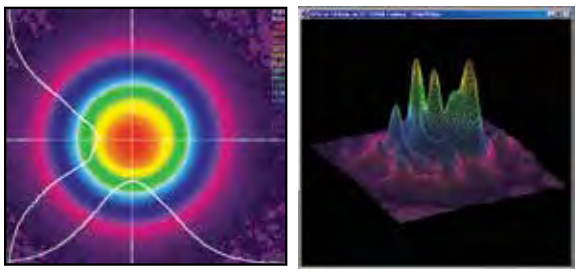


L11059



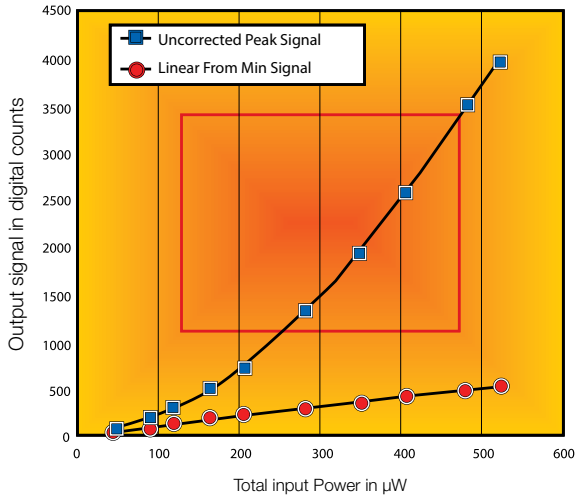
Phosphor Coating Technology

The up-conversion from NIR to visible light in the 1550 series cameras is nonlinear. The anti-Stokes phosphor coating produces visible photons at a rate roughly the square of the input signal. This is shown dramatically where the camera total output increases dramatically faster than a linear output shown in the bottom line. The CCD camera saturation in the center of a beam, the up-converted visible signal drops as the square of the input signal. Thus the lower signal wings of a beam are suppressed, resulting in the appearance and measurement of a beam width much smaller than actual.

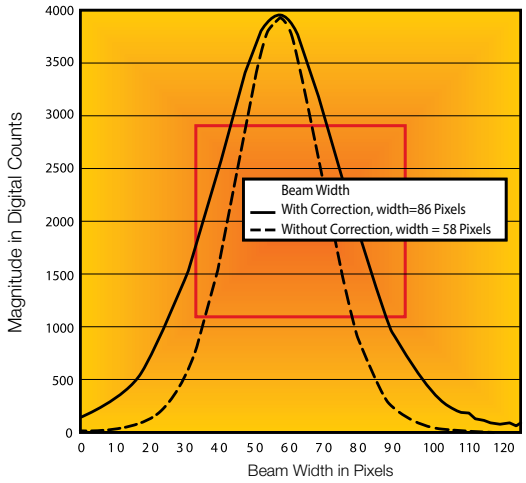


1550nm Fiber Output | 1610nm OPO Output

This illustration is a comparison of the cross-section of a beam with and without correction. As seen, the real width of the beam is much greater than would be observed without correction.



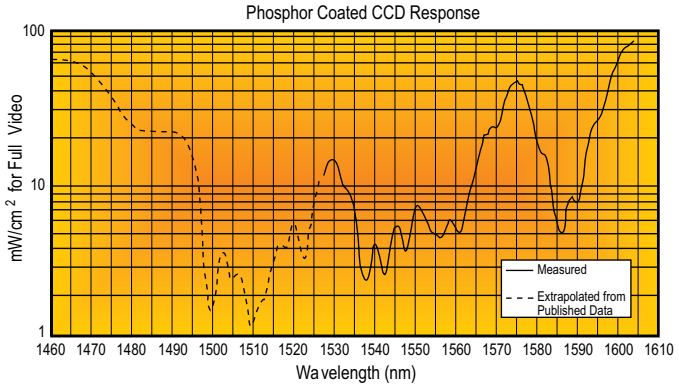
Non-Linearity of SP-1550M Camera at 1550nm



SP-1550M Camera: Comparison of Beam Shape with and without Correction Factor

Wavelength Response

The anti-Stokes up-conversion efficiency is very wavelength dependent. This graph shows the typical spectral response curve of a new, high response coating. As seen, we have calibrated the response from 1527nm to 1605nm. We have extrapolated the shorter wavelength region by comparing our measured response to data published over the entire range.

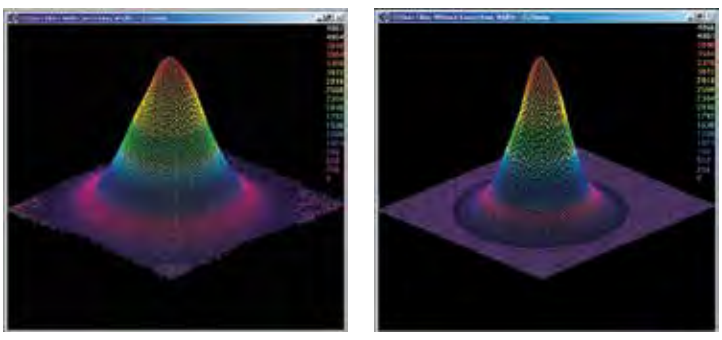


Signal required versus wavelength to achieve camera full signal illumination by anti-Stokes up conversion material.

Phosphor Coated Cameras with Spiricon's BeamGage software

Spiricon's engineers have carefully measured the non-linearity of the signal generated by the Phosphor Coated series cameras. The software in the BeamGage incorporates an algorithm to correct for the non-linearity. This illustration shows the linearity obtained, showing in the top line that the low level signals drop linearly, rather than at the square of the input, seen in the lower line.

The two photos show the uncorrected and corrected camera beam shape in 3D. See the BeamGage section for additional information on the beam analyzer.



Beam profile of a fiber beam with non-linearity correction.

Beam profile of a fiber beam without non-linearity correction.

3.3.4.2.1 Phosphor Coated CCD Cameras For NIR Response

Features

- 1440-1605nm Wavelengths
- NIR Telecom mode field analysis
- NIR Laser beam analysis

Available Models

Notes:

(1) Despite the small pixel size, the spatial resolution will not exceed 50µm due to diffusion of the light by the phosphor coating.
(2) Signal to noise ratio is degraded due to the gamma of the phosphor's response. Averaging or summing of up to 256 frames improves dynamic range by up to 16x = +24 dB.
(3) In normal (non-shuttered) camera operation, the frame rate is the fastest rate at which the laser may pulse and the camera can still separate one pulse from the next. With electronic shutter operation, higher rate laser pulses can be split out by matching the laser repetition to the shutter speed.
(4) For more information please see "Optical Camera Trigger" catalog page.
(5) This is the damage threshold of the filter glass of the filters. Assuming all filters mounted with ND1 (red housing) filter in the front. Distortion of the beam may occur with average power densities of 5W/cm² for beam size 5mm, 10W/cm² for 2mm beam and >30W/cm² for 1mm beam.
(6) Comes with USB 3.0 cable, Trigger cable and 3 ND filters.
(7) Comes with USB 3.0 cable, Power with Trigger cable and 3 ND filters.

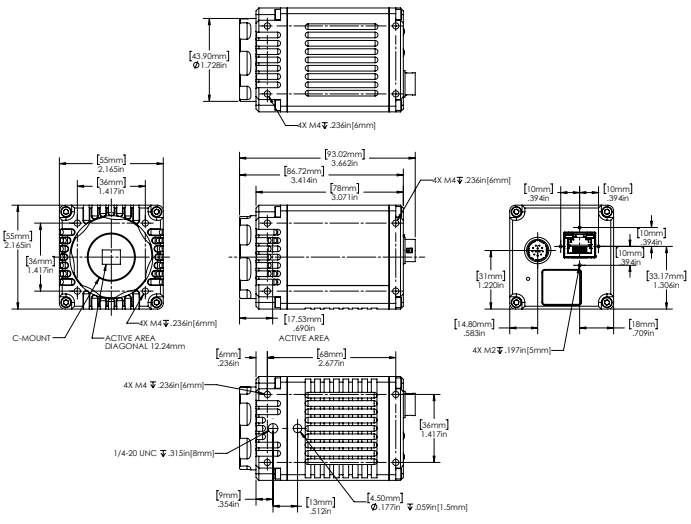
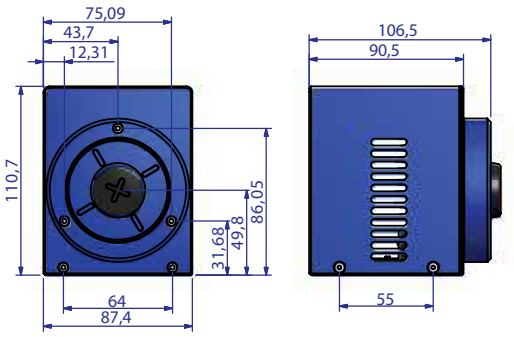
Notes:
(1) Camera set to full resolution and 10 ms exposure time, CW source.
(2) Highly dependent on PC processor and graphics adapter performance.
(3) The uncorrected rate, final corrected rate will be less.
(4) For more information please see "Optical Camera Trigger" catalog page.
(5) Contains USB 3.0 cable to Gigabit Ethernet Adaptor, CAT6 Ethernet Cable, Power with Trigger cable and 3 ND filters.
(6) Comes with USB A to micro B cable, Trigger cable and 3 ND filters.

SP1203/SP1201



XC-130



Pyroelectric Technology

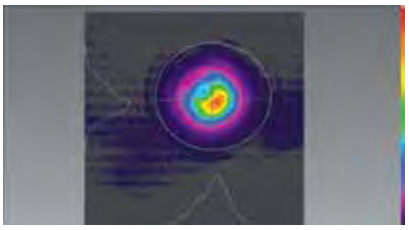
Spiricon has been the world leader in the manufacture of pyroelectric solid-state detector arrays and cameras. For over 25 years the Pyrocam™ has been the overwhelming camera of choice for Laser Beam Diagnostics of IR and UV lasers and high temperature thermal imaging. Precision, stability, reliability, and versatility have become its proud heritage.

The Pyrocam IIIHR offers a 1/2X1/2 inch detector array with easy Windows® camera setup and quantitative image display through the BeamGage software, 16 bit digitizer, versatile Gigabit Ethernet PC interface, and an integral chopper for CW beams and thermal imaging.

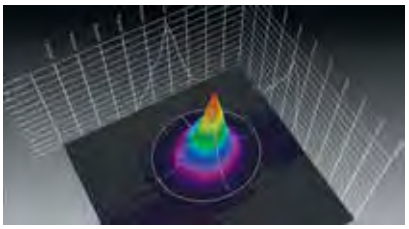
The Pyrocam IV offers a 1X1 inch detector array with easy Windows® camera setup and quantitative image display through the BeamGage software, 16 bit digitizer, with a high-speed Gigabit Ethernet PC interface, and an integral chopper for CW beams and thermal imaging.

See Your Beam As Never Before

Both Pyrocam™ cameras create clear and illuminating images of your laser beam profile. Displayed in 2D or 3D views, you can immediately recognize beam characteristics that affect laser performance and operation. This instantly alerts you to detrimental laser variations. Instantaneous feedback enables timely correction and real-time tuning of laser parameters. For example, when an industrial shop foreman saw the CO_2 laser beam profile in Figure 1 he knew immediately why that laser was not processing materials the same as the other shop lasers, that had similar profiles shown in Figure 2.

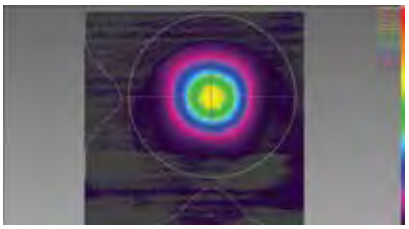


2D CO_2 laser beam

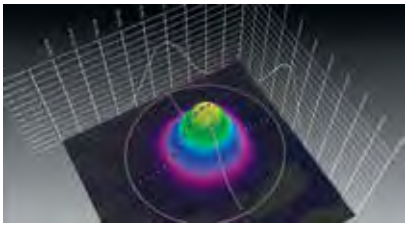


3D CO_2 laser beam

Figure 1 - Distorted spot, not good for material processing



2D CO_2 laser beam



3D CO_2 laser beam

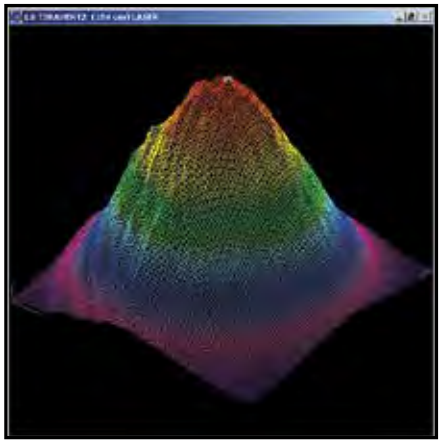
Figure 2 - Good spot for material processing

Pulsed and CW Lasers

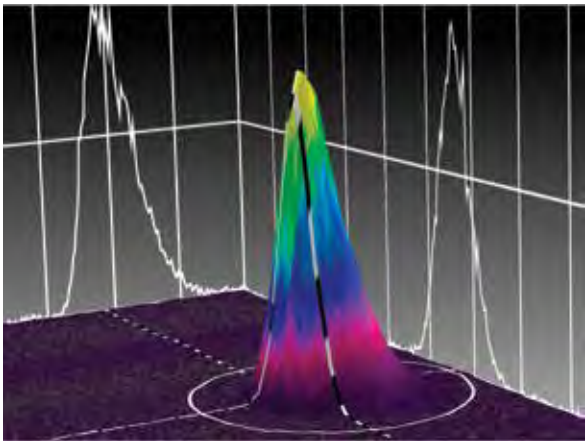
The Pyrocams measure the beam profile of both pulsed and CW lasers. Since the pyroelectric crystal is an integrating sensor, pulses from femtosecond to 12.8ms can be measured. The pyroelectric crystal only measures changes in intensity, and so is relatively immune to ambient temperature changes. Because CW laser beams must be chopped to create a changing signal, the Pyrocam™ contains an integral chopper.

Measuring Terahertz Beam Profiles

Spiricon's Pyrocam pyroelectric cameras are an excellent tool for measuring THz lasers and sources. The coating of the crystal absorbs all wavelengths including 1µm to over 3000µm (0.1THz to 300THz). For THz sources the sensitivity of the Pyrocam is relatively low, at about 1.5mW/cm^2 at full output. With a S/N of 1000, beams of 30mW/cm^2 are easily visible.
In addition, with Spiricon's patented Ultracal baseline setting, multiple frames can be summed to "pull" a signal out of the noise. Summing 256 frames enables viewing of beams as low as 0.5-1.0mW/cm^2.



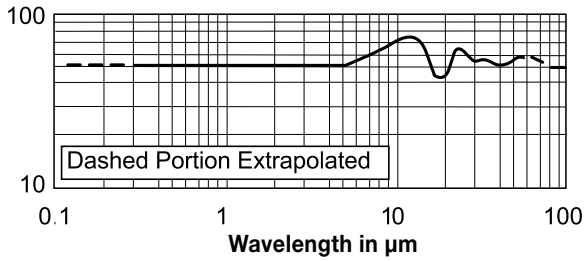
Pyrocam III imaging THz laser beam at 0.2THz (1.55mm) 3mW input power; 19 frames summed



Pyrocam IV imaging THZ laser beam 0.5 THz (5mm) 5mW input power; single frame

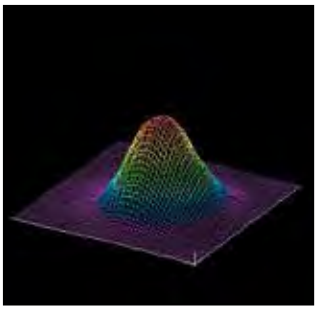
Broad Wavelength Response

The Pyrocam detector array has a very broadband coating which enables operation at essentially all IR and UV laser wavelengths. The curve ends at 100nm in the UV, but X-ray operation has been observed. Likewise the curve ends at 100µm in the far IR, but the camera has been used at >3000µm.

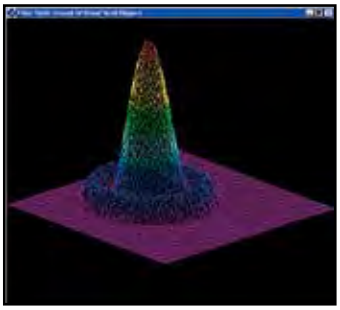


Spectral response of Pyrocam III detector array without window.

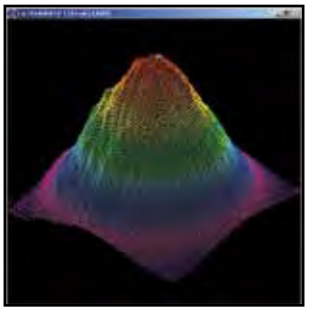
Thus you can use the Pyrocam in the near IR for Nd:YAG lasers at 1.06µm, and for infrared fiber optics at 1.3µm and 1.55µm. Use the Pyrocam for HF/DF lasers near 4µm and for Optical Parametric Oscillators from 1 µm to 10µm. It measures Free Electron Lasers between 193µm and 3000µm.



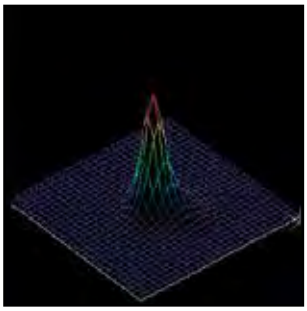
Er:YAG laser at 2.9µm.



Output of infrared fiber optic.



THz laser beam at 1.6THz (184µm).



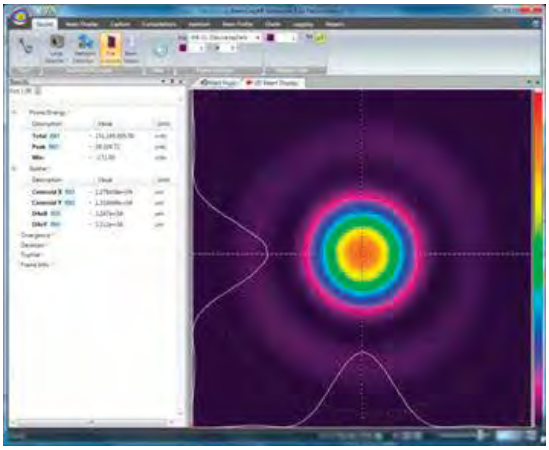
Free Electron laser at 100µm.

The Pyrocam™ is extremely useful in the UV from 13nm to 355nm for Excimer lasers and for tripled or quadrupled Nd:YAG lasers. The detector is stable under UV illumination, without the deterioration experienced by CCD cameras. (The pyroelectric detector operates in the visible spectrum, and can see the alignment HeNe used with CO_2 lasers. However, spurious response from the underlying silicon multiplexer creates undesirable performance, and the camera is not recommended for quantitative visible measurements).

BeamGage Image Analysis Software

Both Pyrocams come bundled with BeamGage, the state-of-the-art beam profiling system that performs rigorous data acquisition and analysis of laser beam parameters, such as beam size, shape, uniformity, divergence, mode content, and expected power distribution. Once the Pyrocam is connected to the PC and BeamGage is running, the software automatically detects the camera presence and is immediately ready to start taking images and displaying them on the monitor.

BeamGage is the industry's first beam profiling software to be newly designed, from scratch, using the most advanced tools and technologies. BeamGage is based on UltraCal™, Spiricon's patented baseline correction algorithm that helped establish the ISO 11146-3 standard for beam measurement accuracy. BeamGage provides high accuracy results, guaranteeing the data baseline (zero-point reference) is accurate to 1/8th of a digital count on a pixel-by-pixel basis.

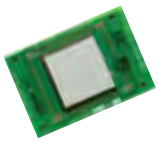


BeamGage recognizes the Pyrocam IIIHR & IV and allows you to quickly start analyzing your laser beam

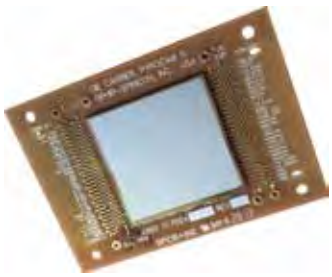
BeamGage permits the user to employ custom calculations for best fit to an individual application. These user-defined computations are treated like the standard calculations. They can be displayed on the monitor, logged with results, and included in hard-copy reports.
The system also allows the user to configure the displayed calculations, set-up the screen layout, and password-protect the configuration. This permits secure product testing, ensures security in production environments where plant floor personnel interface with the system, and assures the validity of the data for Statistical Process Control (SPC).

Hybrid Integrated Circuit Sensor

The Pyrocam consists of a $LiTa0_3$ pyroelectric crystal mounted with indium bumps to a solid-state readout multiplexer. This sensor, developed as the Company's core technology for the Pyrocam I, has proven to be the most rugged, stable, and precise IR detector array available. Light impinging on the pyroelectric crystal is absorbed and converted to heat, which creates charge on the surface. The multiplexer then reads out this charge. For use with short laser pulses, the firmware in the camera creates a very short electronic shutter to accurately capture the thermally generated signal.



Pyrocam IIIHR 12.8X12.8mm array



Pyrocam IV 25mm X 25mm array

State-Of-The-Art Electronics

The camera features a high resolution A/D converter which digitizes deep into the camera noise. This enables reliable measurement and analysis of both large signals and low level signals in the wings of the laser beam. High resolution digitizing also enables accurate signal summing and averaging to pull weak signals out of noise. This is especially useful with fiber optics at 1.3µm and 1.55µm, and in thermal imaging.

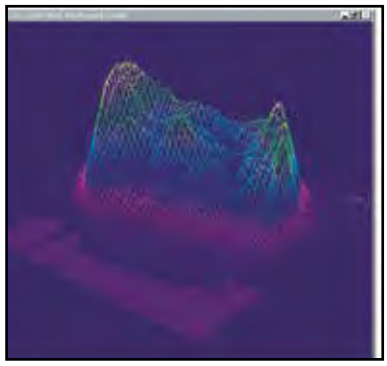
Applications Of The Pyrocam™ IIIHR

The Pyrocam is an ideal camera for use in scientific laboratory investigation of laser beams. This includes physics, chemistry, and electronic system designs. As an example, the photos below show a research CO_2 laser and a research Nd:YAG laser, both with cavity misalignment.
The camera is also useful in product engineering of CO_2 and other infrared lasers. The Pyrocam is an integral part of the assembly lines of many CO_2 laser manufacturers. Integrators of systems are using the Pyrocam sensor to make sure that optical systems are aligned and operating properly.

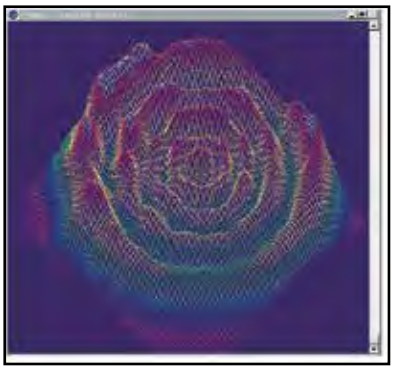
There are many medical applications of the Pyrocam, such as the analysis of excimer lasers used for eye surgery. In many cases these lasers need alignment to ensure that the eye surgery is performed as expected. Other medical IR lasers perform dermatology, for which the uniformity of the beam profile must be assured.

Fiber optic communications, at 1.3µm and 1.55µm make significant use of the Pyrocam for analyzing the beams being emitted, as well as analyzing properties of the beams before launching them into fibers. The greater stability of the Pyrocam make it a good choice over other cameras operating at telecommunication wavelengths.

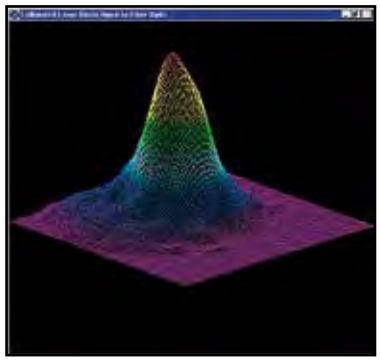
The Pyrocam is becoming an essential tool in the maintenance of industrial infrared lasers, especially CO_2. The Pyrocam replaces non-electronic mode burns and acrylic blocks by providing higher definition electronic recording of data, and analysis of short term fluctuations. The Pyrocam is superior to other electronic methods of measuring CO_2 lasers because the entire beam can be measured in a single pulse, and additional measurements made in real-time. This ensures that the beam did not change during the measurement.



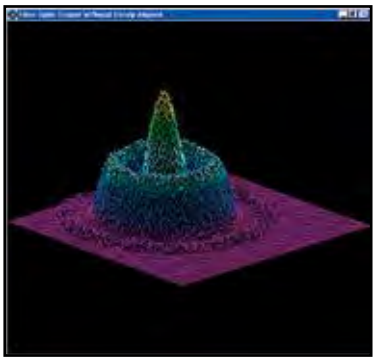
CO_2 laser with cavity misalignment.



Nd:YAG laser with cavity misalignment.



CO_2 laser with cavity misalignment.



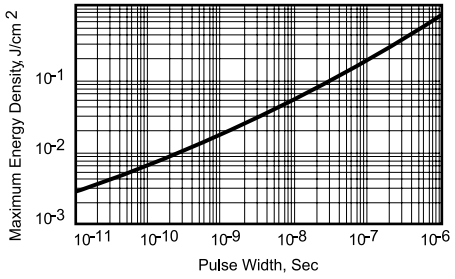
Nd:YAG laser with cavity misalignment.

Detector Damage Threshold

The Pyrocam sensor is capable of operation with intensities about 100 times greater than CCD cameras. This makes the camera ideal for use with high power lasers, as less attenuation is required. Nevertheless, pulsed lasers with fluence too high can evaporate the absorbing front electrode.

As shown the damage threshold increases with pulse width. With nanosecond and longer pulses, detector saturation occurs before damage. With shorter pulses it helps to increase the camera amplifier gain so that electronic saturation occurs before damage.

The sensor can be damaged by excessive CW power, which causes crystal cracking. Very few Pyrocam detectors have been damaged by CW power, but some have been ablated by high peak pulse energy.



Pulsed damage threshold of pyroelectric detector coating.

Pyrocam™ IIIHR & Pyrocam™ Series

Pyrocam IIIHR

Pyrocam IV

Features

- Spectral ranges available from 13 to 355nm and 1.06 to >3000µm
- Image CO_2 lasers, telecom NIR lasers, THz sources and other infrared sources out to Far IR
- Solid state array camera with 1000:1 linear dynamic range for accurate profiling
- Integrated chopper for CW beams and thermal imaging
- Interchangeable windows available for a variety of applications
- Includes BeamGage® Laser Beam Analysis Software for quantitative analysis and image display

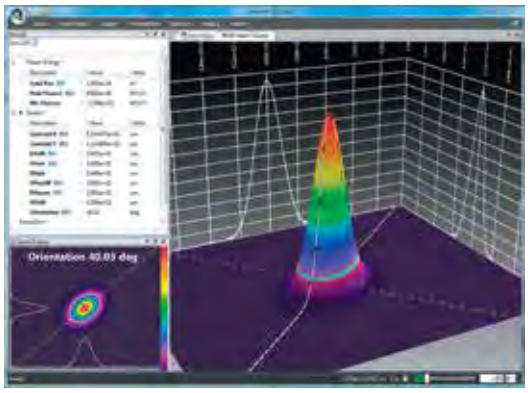
3.3.5 BeamMic™ - Basic Laser Beam Analyzer System

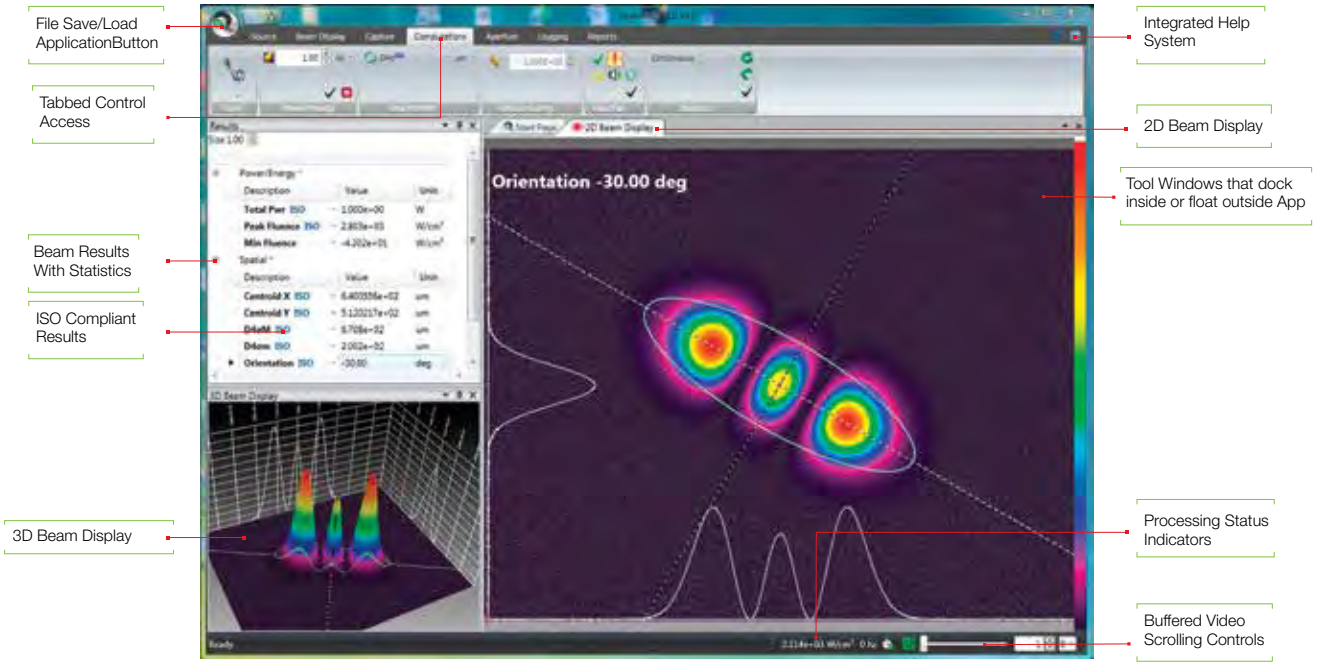
- High-speed false color beam intensity profile displays in both 2D and 3D
- Operates in Windows 7 and Windows 10
- Numerical beam profile analysis employs patented advanced calibration algorithms
- Extensive set of ISO quantitative measurements
- ISO beam width and diameter methods
- Enhanced window layout tools to get the most out of the desktopdisplay area
- Pass/fail testing available on most all measured parameters
- Support for USB SPxxx series cameras
- Supports satellite windows on multiple monitors
- Continuous zoom scaling in both 2D and 3D
- Results logging capabilities exportable to Excel
- Industry std data file formats, HDF5 and CSV
- Configurable Report Generator that allows cut and paste of results, images and settings from .PDF and .XPS file types
- Statistical Analysis of all measured parameters
- Both Drawn and Auto Aperture for isolating beam data
- Integrated automatic Help linked into this .pdf Users Guide
- Automation interface via .NET components



BeamMic is an introductory product for those that do not need all of the features in our award winning beam profiling product, BeamGage. BeamMic includes a simplified set of measurements allowing for basic beam characterization to help improve your system performance without going to a full-featured SPC type system. This is perfect for the operator to do a quick check on the laser system prior to starting their process. BeamMic meets many of our industrial customer's basic needs at a cost effective price.

The beam's size, shape, uniformity or approximation to the expected power distribution, can make or break an application. Accurate knowledge of these parameters is essential to the accuracy of any laser-based application. As laser applications push the boundaries of laser performance it is becoming more critical to understand the operating criteria.

BeamMic Main Display Screen



3.3.5.1 Software Specifications

Features	BeamMic - Laser Beam Analyzer Software
Features Overview	Designed for entry level or basic profiling needs
	Supports our patented Ultracal algorithm plus Auto-setup and Auto-exposure capabilities
	Extensive set of ISO quantitative measurements
	Support for high and low resolution USB cameras
	Simultaneous 2D and 3D displays
	Multi-instance, multi-camera use
	Supports Satellite windows on multiple monitors
	Continuous zoom scaling in both 2D and 3D
	Camera ROI support
	Manual and Auto-aperturing to reduce background effects
	Pass/Fail on all results items, w/multiple alarm options
	Results logging capabilities in a reloadable
	Industry standard data file format
	Configurable Report Generator that allows cut and paste of results, images and settings.
	Supports English, German, Japanese and Chinese Windows OS in 64bit . Multilingual GUI in English, Japanese and Chinese.
Quantitative Calculations; Basic Results	(per ISO 11145, 11146-1/-3, and 13694)
Power/Energy Results	Total power or energy
	Peak power/energy density
	Min. Fluence
Spatial Results	Peak and Centroid locations
	Beam width
	• Second Moment (D4s)
	• Knife Edge 90/10
	• Knife Edge (User selectable level)
	• Percent of Peak (User selectable)
	• Percent of Total Energy (User selectable)
	• Encircled power smallest slit @ 95.4
	• Moving Slit (User Selectable)
	Beam diameter
	• Average diameter (based on x/y widths)
	• Second Moment (D4s)
	Elliptical Results
	• Elliptical orientation
	• Ellipticity
	• Eccentricity
2D Features	Continuously zoomable and resizable displays in satellitable window
	Continuous Z axis display magnitude scaling
	Zoomable to subpixel resolution for origin and cursor placements
	Pixel boundaries delineated at higher zoom magnifications
	Adjustable Cursors that can track peak or centroid
	Adjustable manual apertures
	Viewable Auto-aperture placement
	Displayed beam width marker
	Integrated Mouse actuated pan/zoom controls
	Manual or fixed origin placement
3D Features	3D graphics utilize solid surface construction with lighting and shading effects
	Integrated Mouse actuated pan/zoom/tilt/rotate controls
	Selectable Mesh for drawing speed vs resolution control
	Continuously zoomable and resizable displays in satellitable window
	Continuous Z axis display magnitude scaling
	User enabled backplanes with cursor projections
Statistical Analysis	Performed on all measurement functions with on-screen display
	• Choices of intervals
	• Manual start/stop
	• Time from 1 second to 1000 hours
	• Frames from 2 to 99,999
	Measurements reported
	• Current frame data, Mean, Standard Deviation, Minimum, Maximum of each calculation performed
File types	Industry Standard HDF5 data and setup file format which are compatible in third party applications such as MatLab and Mathmatica
	Math program and Excel compatible ASCII-csv results files
	Graphics in jpg file format
	A user defined single file output that can contain settings, beam displays, beam profiles, results in either .pdf or .xps file formats
Printing	Images, reports, results, statistics and setup information
	Option to print many frames in a single operation
	WYSIWYG images
Pass/Fail	Set Maximum/Minimum limits on all calculations and statistics
	Red/Green font color indication on result items
	Multiple choices for indication of failed parameters, including TTL pulse for external alarm
	Master pass/fail which triggers alarm on any failure
	USB signal, beep, stop, and log alarm options
Logging	
	Results in ASCII-csv
	Continuous Logging
	Time Interval Logging
	Frame Count Logging
	Pass/Fail Sampling

Features	BeamMic - Laser Beam Analyzer Software
Exporting	Convert frame buffer data to third party format
	Export a user specified number of frames from the buffer
	Export Image Data: ASCII-cvs
	Export Results: ASCII-csv
	Export Picture: jpg, gif, tiff, bmp, png file formats supported
	Export Image Data in Aperture
Integrated Help	PDF Operators Manual
	Context Sensitive - "Whats this?" Help
	Context Sensitive Hints
Signal Conditioning for Enhanced Accuracy	Spiricon's patented Ultracal enables more accurate beam measurement and display. Ultracal takes a multi- frame average of the baseline offset of each individual pixel to obtain a baseline accurate to approximately 1/8 of a digital count. This baseline offset is subtracted from each frame, pixel by pixel, to obtain a baseline correction accurate to 1/8 digital count. Spiricon's Ultracal method retains numbers less than zero that result from noise when the baseline is subtracted. Retaining fractional and negative numbers in the processed signal can increase the beam width measurement accuracy by up to 10X over conventional baseline subtraction and clip level methods. Spiricon's Ultracal conforms to the best method described in ISO 11146-3:2004
Frame Averaging	Up to 256 frames can be averaged for a signal-to-noise ratio, S/N, improvement of up to 16X (Noise is averaged up to 1/256th [8 fractional bits]). Data is processed and stored in a 32bit format
Frame Summing	Up to 256 frames can be summed to pull very weak signals out of the noise.
	Due to the precise nature of Ultracal baseline setting, (i.e., a retention of both positive and negative noise components) summing of frames can be performed without generating a large offset in the baseline
Convolution (Adjacent Pixel Averaging)	Choice of 5 convolution algorithms for spatial filtering for both display and calculations. Spatial filtering improves the visual S/N
Camera Features	Camera features are governed by the capabilities of the various cameras that will interface with these software products, and second by which of these camera features are implemented in the software. This section will describe typical camera features supported in the application
	Black Level Control (used by Ultracal and Auto-X and Auto-setup)
	Gain Control (used by Auto-X and Auto-setup)
	Exposure Control (used by Auto-X and Auto-setup)
	Pixel Sampling
	Bits per pixel setting
	External Trigger Input
	Trigger Delay
	Strobe Output
	Strobe Delay
	External Trigger Probe
	Internal Trigger Probe
Camera related features in the applications	These are features related to but not generally dependent upon the camera design
	Gamma Correction
	Gain Correction
	Bad Pixel Correction
	Lens Applied Option
	Pixel scale settings
	Magnification settings
	Frame buffer settings
	Ultracal
	Enable Auto-X (auto exposure control)
	Perform an Auto-Setup
	8 & 12 bits per pixel
	Select Format
	Measure S/N ratio
Trigger, Capture and Synchronization Methods	Capture methods are features related to the application while Synchronization methods relate more to the abilities of the specific camera. NOTE: Frame capture rates are determined by many factors and are not guaranteed for any specific operating configuration.
	Trigger modes
	• CW - captures continuously, see Capture Options below
	• Trigger-In from laser: Trigger pulses supplied to the camera
	• Strobe-Out to laser: Strobe pulses output from the camera
	• Video Trigger: Frame captured and displayed only when the camera sees a signal greater than a user set level
	Capture options
	• Capture options are redefined and are approached in a different manner than older products. The items listed below will allow for all of the previous methods but with more flexibility than ever before
	• Results Priority: Results priority will slow the capture rate to be in sync with the computational results and display updates
	• Frame Priority: Frame priority will slow results and display updating to insure that frames are collected and stored in the frame buffer as fast as possible (replaces block mode)
	• Stop After: Will collect a set number of frames and then stop (replaces Single-Shot mode)
	• Periodic: Will collect frame at a programmed periodic rate
	• Periodic Burst: Will collect frames in a Burst at programmed periodic rates
	• Post processing is still available but is done via a different mechanism and is limited to only data file sources
Automation Interface (.NET)	Automation Interface with examples in LabVIEW, Excel and Net VB
	Automate launch and termination of the application
	Automate start, stop, Ultracal, Auto-X and Auto Setup
	Automate the loading of application setups
	Automate control of most camera settings
	Automate a subset of the application features and controls
	Automate the capture of Binary Video Data
	Automate the acquisition of application results
	Automate the acquisition of application Images
System Requirements	PC computer running Windows 7 and Windows 10 Laptop or Desktop.
	GHz Pentium style processor, dual core recommended
	Minimum 2GB RAM
	Accelerated Graphics Processor
	Hard drive space suitable to hold the amount of video data you expect to store (50-100 GB recommended)

Item	Description	P/N
BeamMic™ USB3 Beam Analyzer Systems (camera and software)		
BM-USB3-SP932U	BeamMic software, software license, 1/1.8" format 2048X1536 pixel camera with 4.5mm CMOS recess. Comes with USB 3.0 cable, Trigger cable and 3 ND filters	**SP90608**
BM-USB3-SP920s	BeamMic software, software license, 1/1.8" format 1624X1224 pixel camera with 4.5mm CCD recess. Comes with USB 3.0 cable, Trigger cable and 3 ND filters	**SP90551**
BM-USB3-SP920s-1550	BeamMic software, software license, 1/1.8" format 1624x1224 pixel camera with 4.5mm CCD recess. Phosphor coated to 1550 nm. Comes with USB cable and 3 ND filters	**SP90563**
Software Upgrades		
BeamMic to BGS Upgrade	Upgrade BeamMic to BeamGage Standard Edition. Requires a camera key to activate. (SP cameras may require a firmware upgrade to enable ROI features)	**SP90316**
BeamMic to BGP Upgrade	Upgrade BeamMic to BeamGage Professional Edition. Requires a camera key to activate (SP cameras may require a firmware upgrade to enable ROI features)	**SP90317**
Optical Synch for Pulsed Lasers		
Photodiode Trigger, Si, 1100	Optical trigger assembly which can be mounted on camera or separately to sense laser pulses and synchronize SP cameras with pulses. See optical trigger data sheet	**SP90408**
Recommended Optional		
LBS-300s-BB	Dual beam splitters and configurable 9 ND filters for 190-1550nm; screws onto front of camera	**SP90467**

Camera Compatibility

For lasers between 190-1100nm wavelengths, BeamMic interfaces to both silicon CCD and CMOS USB cameras.
For applications between 1440-1605nm, BeamMic supports cost effective phosphor coated CCD cameras.

190-1100nm

Model	SP932U
Application	1/1.8" format, slim profile, wide dynamic range, CW & pulsed lasers, adjustable ROI
Beam sizes	34.5µm - 5.3mm
Number of effective pixels	2048 x 1536
CMOS recess	4.5±0.11mm
PC Interface	USB 3.0
Page in catalog	194

* May be useable for wavelengths below 300nm but sensitivity is low and detector deterioration may occur. Therefore UV image converter is recommended.

Model	SP920s
Application	1/1.8" format, high resolution, wide dynamic range, CW & pulsed lasers, adjustable ROI
Beam sizes	44µm - 5.3mm
Number of effective pixels	1624 x 1224
CCD recess	4.5 mm
PC Interface	USB 3.0
Page in catalog	195

* May be useable for wavelengths below 340nm but sensitivity is low and detector deterioration may occur. Therefore UV image converter is recommended.

1440-1605nm

Model	SP920s-1550
Application	NIR wavelengths, 1/1.8" format, low resolution, adjustable ROI and binning
Beam sizes	600µm - 5.3mm
Number of effective pixels	1624 x 1224
CCD recess	4.5 mm
PC Interface	USB 3.0
Page in catalog	198

3.3.6 Focal Spot Analyzer

Captures the beam size, shape and profile at focus

- Image focal spots down to 34.5µm in size
- For laser powers up to 400W [1] (additional external ND filters required) and up to 5kW for FSA- HP version
- Can measure systems with focal length as short as 73mm [2] (exact path length distance within the assembly will be NIST/National Lab calibrated and includes a calibration certificate +/-50µm)
- Produces undistorted sample of laser under test
- Adjustable attenuation maximizes system dynamic range
- Up to 1 x 10^{-10} attenuation available (without external filters)
- Analyzer includes camera, attenuation, BeamGage software and calibration certificate

Measure your laser beam power distribution and focal spot size of wavelengths from 300 – 1100nm.
The average power can be from <1 to 400 Watts and up to 5 kW for FSA-HP, the focal spot can be as small as 34.5µm.
The FSA can also be used to measure how the focal spot shifts with power during its critical start-up phase.
The FSA is a combination of a camera, Beam Splitter, natural density filters and a BeamGage software.

FSA-HP

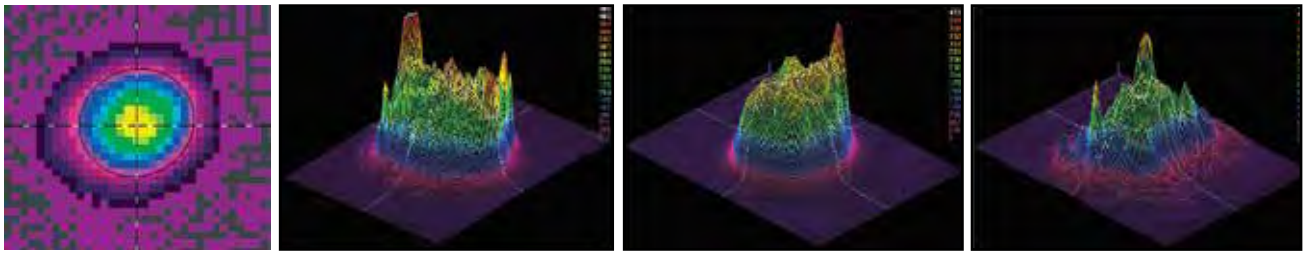
For measurement of focal position and profile of high power lasers above 1kW at NIR (~1064nm) region, FSA-HP version can be used. It allows same operation as standard FSA but operates up to 5kW or 15MW/cm^2 without significant heating.
Only 0.0001% (1/10^6) of the incident beam is reflected towards Ophir Beam Profiler, enabling beam sampling of extremely high powers and power densities.

Operation

The assembly is placed below the final focusing lens of the laser at a distance equal to the expected focal length less the ~73mm of the calibrated distance, so the beam will be focused on the camera layer. The focal spot is found by moving the assembly closer and farther from the beam until the smallest spot size is seen. The distance between the focusing lens and the datum point on the FSA assembly is added to the distance from the datum to the camera array (each FSA assembly will be factory calibrated to within +/- 50 µm). These two measurements will give you the exact distance of your lasers focal spot.

(1) For Gaussian beam diameter <1/2 the clear aperture and depending on ND filter and camera saturation limits the maximum power may be as high as 1000W.
(2) Using beam expanders, focal spots as small as 10µm can be measured and calibrated, Ask your Ophir representative about special calibrated focal spot analyzers.

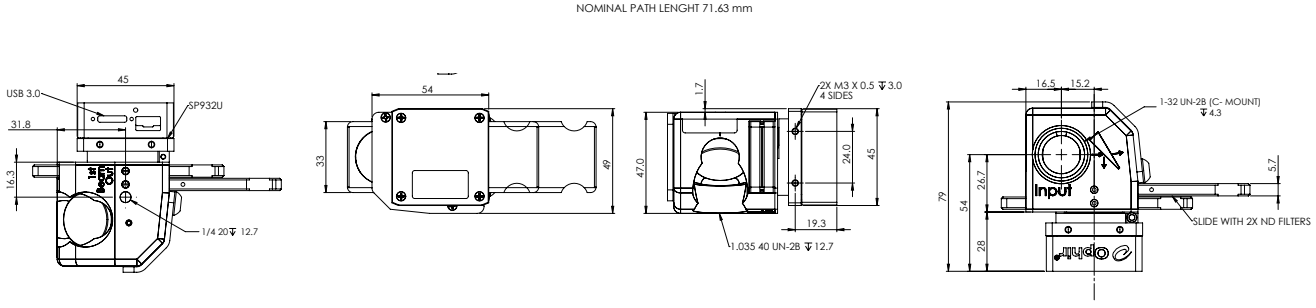
Examples of Usage



65µm diameter focal spot

Focal spot spatial power density changing with laser power level

FSA-SP932U



Cameras Specifications

Model	SP932U	LT665
Format	1/1.8"	1"
Wavelengths [1]	190 - 1100nm	190 - 1100nm
Active Area	7.06mm x 5.3mm	12.5mm x 10mm
Beam sizes	34.5µm - 5.3mm	46µm - 9.9mm
Pixel spacing	3.45µm x 3.45µm	4.54µm x 4.54µm
Number of effective pixels	2048 x 1536	2752 x 2192
Dynamic range	72 dB	54 dB
Linearity with Power	±1%	±1%
Accuracy of beam width	±2%	±2%
Frame rates in 12 bit mode [2]	24 fps at full resolution	27 fps at full resolution
Shutter duration	25µs to 2000ms	31µs to multiple frames
Gain control	1.46 dB to 256 dB	0.8 dB to 56 dB
Trigger	Hardware/Software trigger & strobe out	Hardware/Software trigger & strobe out
Photodiode trigger (Optional) [3]	Si response: SP90408	Si response: SP90408
Saturation intensity [4]	32µW/cm² at 632nm, 500µW/cm² at 1064nm	14µW/cm²
Lowest measurable signal [4]	0.2nW/cm²	0.3nW/cm²
Damage threshold [5]	50W/cm² / 1J/cm² with all filters installed for < 100ns pulse width	50W/cm² / 1J/cm² with all filters installed for < 100ns pulse width
Dimensions	45mm x 45mm x 22.5mm	43mm x 43mm x 65mm
Imager recess	4.5mm	17.5mm
Image quality at 1064nm	Pulsed with trigger sync - excellent Pulsed with video trigger - good CW - good	Pulsed with trigger sync - excellent Pulsed with video trigger - good CW - good
Operation mode	CMOS, Global shutter	Quad Tap interline transfer CCD
PC interface	USB 3.0	USB 3.0
OS Supported	Windows 7 (64) and Windows 10	Windows 7 (64) and Windows 10
Compliance	CE, UKCA, China RoHS	CE, UKCA, China RoHS

Notes:
(1) The camera's natural response is from 340nm through 1100nm. To measure effectively below 340nm, please make use of one of our UV converters. Otherwise the sensitivity is too low and the measurement accuracy may degrade.
(2) Highly dependent on PC processor and graphics adapter performance.
(3) For more information please see "Optical Camera Trigger" catalog page.
(4) Camera set to full resolution at maximum frame rate at 633nm CW wavelength. Camera set to minimum useful gain and 1ms exposure time for saturation test and maximum useful gain and 35ms exposure time for lowest signal test.
(5) This is the damage threshold of the filter glass of the filters. Assuming all filters mounted with ND1 (red housing) filter in the front. Distortion of the beam may occur with average power densities of 5W/cm² for beam size 5mm, 10W/cm² for 2mm beam and >30W/cm² for 1mm beam.

LBS -300s Specifications

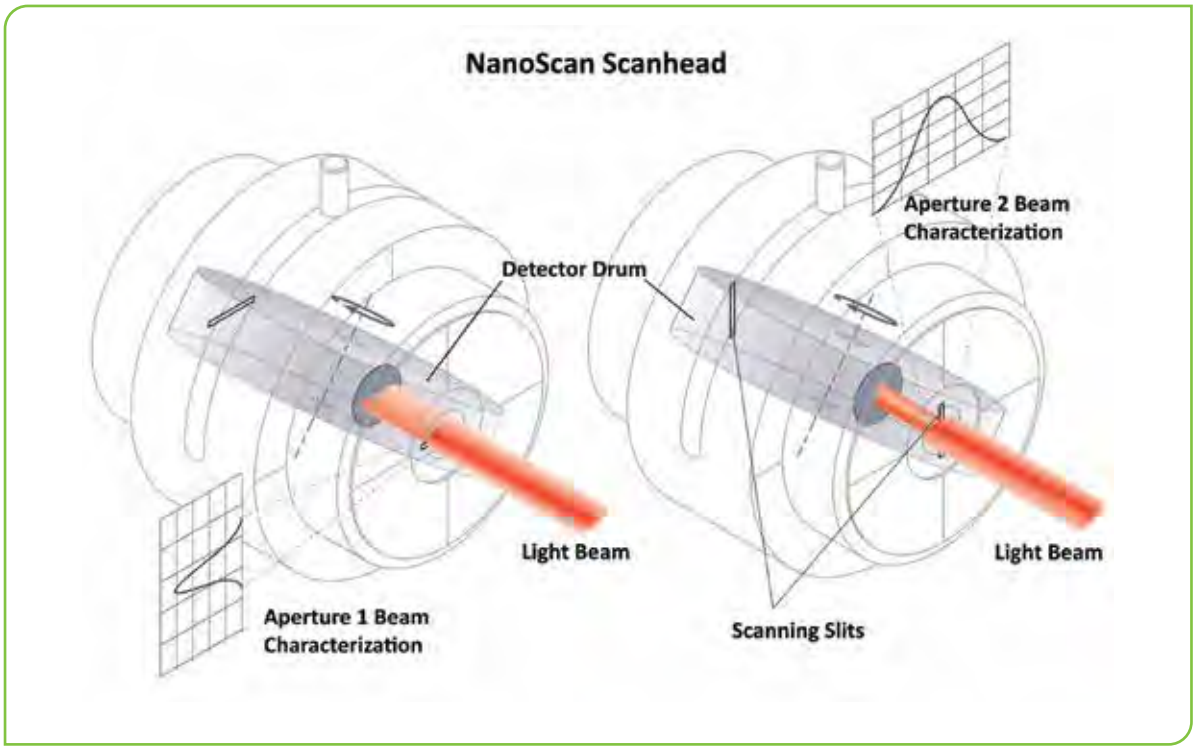
3.4 Introduction to Scanning-Slit Profilers

The scanning slit beam profiler moves two narrow orthogonal slits in front of a linear photo-detector through the beam under analysis. Light passing through the slit induces a current in the detector. Thus, as the slit scans through the beam, the detector signal is linearly proportional to the spatial beam irradiance profile integrated along the slit. A digital encoder provides accurate slit position. The photo-induced current signal is digitized and analyzed to obtain the beam profile in both X and Y from the two orthogonal slits.

The slit apertures act as physical attenuators, preventing detector saturation for most beam applications. High dynamic range amplification allows operation over many orders of magnitude in beam power.

From these profiles, important spatial information such as beam width, beam position, beam quality, and other characteristics are determined. This technique can accommodate a wide variety of test conditions. Because slit scanners measure beams at high powers with little or no attenuation, they are ideal to profile beams used in material processing.

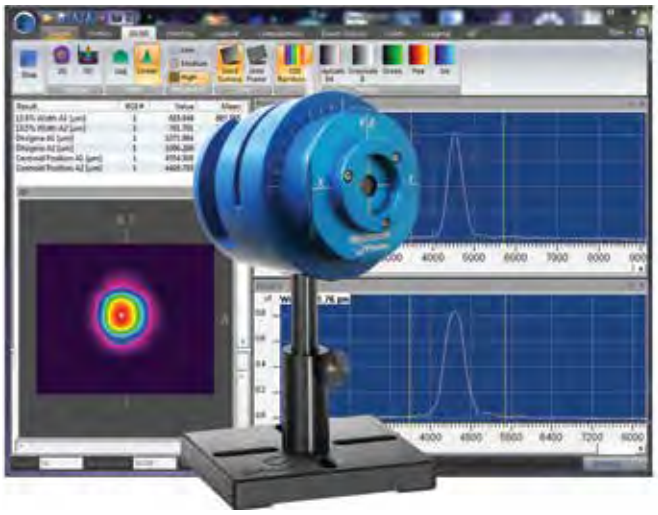
Carbon dioxide (CO_2) lasers are widely used in materials processing, and have a 10.6 micron wavelength that cannot be profiled with most cameras. Slit scanners, therefore, provide an convenient means of measuring high-resolution CO_2 lasers with powers up to and exceeding 1000 watts.



Scanning Slit Beam Profiler For High Accuracy Dimensional Measurement

NanoScan 2s combines the convenience and portability of direct USB connectivity with the speed, accuracy, and dynamic range that users have come to expect from the Photon NanoScan slit based profilers. The NanoScan 2s is available with a silicon, germanium or pyroelectric detector, which allows it to profile lasers of any wavelength from UV to far infrared, out to 100µm and beyond. With the new NanoScan 2s software package, the user can configure the display interface however it is desired; displaying those results of most interest on one easy-to-read screen, or on multiple screens.

The NanoScan slit profiler is the most versatile laser beam profiling instrument available today: providing instantaneous feedback of beam parameters for CW and kilohertz pulsed lasers, with measurement update rates to 20Hz. The natural attenuation provided by the slit allows the measurement of many beams with little or no additional attenuation. The high dynamic range makes it possible to measure beams while adjustments to focus are made without having to adjust the profiler. Just aim the laser into the aperture and the system does the rest!



Capabilities

NanoScan 2s is a PC-based instrument for the measurement and analysis of laser beam spatial irradiance profiles in accordance with the ISO standard 11146. The scan heads also measure power in accordance with ISO 13694.

NanoScan uses the scanning slit, one of the ISO Standard scanning aperture techniques. It can measure beam sizes from microns to centimeters at beam powers from microwatts to over kilowatts, often without attenuation. Detector options allow measurement at wavelengths from the ultraviolet to the infrared.

The NanoScan 2s digital controller has 16-bit digitization of the signal for enhanced dynamic range up to 35dB power optical. With the accuracy and stability of the beam profile measurement you can measure beam size and beam pointing with a 3-sigma precision of several hundred nanometers. The software controllable scan speed and a “peak-connect” algorithm allows the measurement of pulsed and pulse width modulated lasers with frequencies of 10kHz and higher*. The NanoScan is also able to measure up to 16 beams, or regions of interest, in the aperture simultaneously.

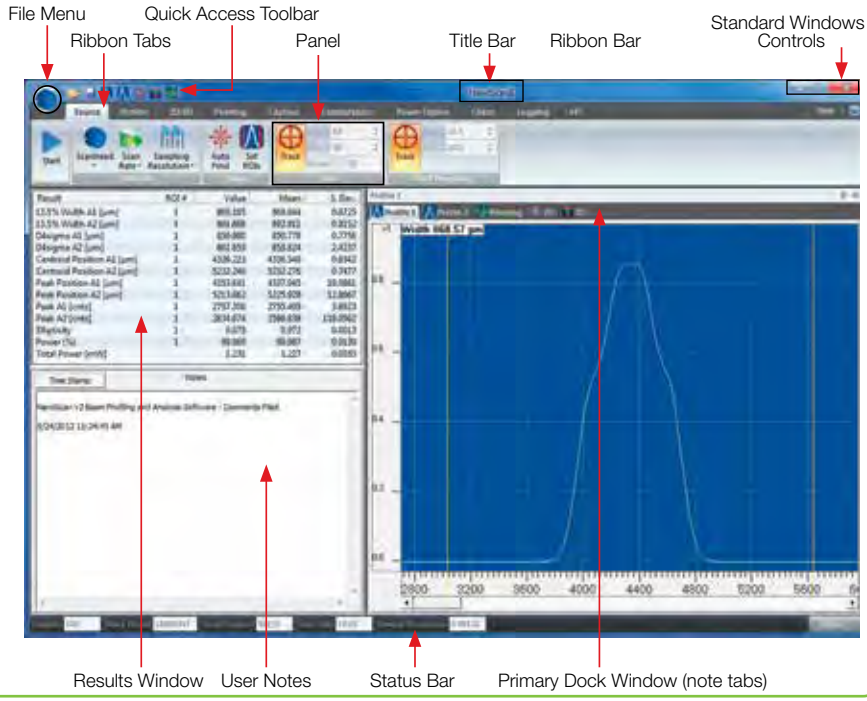
Benefits

- Measure any wavelength from UV to very far infrared (190nm to >100µm)
- Instantaneous real time display of results; beam found in less than 300ms and updated at up to 20Hz
- Waist location can be determined to within ±25µm due to the well-defined Z-axis datum plane of the NanoScan
- Measure pulsed and CW lasers
- For pulsed beams the pulse rate is measured and reported
- From as small as 7µm beams, can be measured directly with guaranteed accuracy and precision
- Additional high signal to noise ratio can be achieved with averaging
- Z-axis caustic measurements are available with built-in mechanical linear stage control
- M2 propagation ratio values available with simple M^2 Wizard included with the software.
- Any beam result can be charted and monitored over time
- Power levels can be monitored along with spatial measurements to determine if losses are introduced by beam adjustments
- Log results to text files for independent analysis
- Automate the system using optional ActiveX Automation commands, available with the PRO version software and scan heads Samples of automation programs included for Excel, VBA, LabView and Visual Basic.net

* The minimum frequency is a function of the beam size and the scan speed. This is a simple arithmetic relationship; there must be a sufficient number of pulses during the time that the slits sweep through the beam to generate a meaningful profile. Please refer to Photon’s Application Note, Measuring Pulsed Beams with a Slit-Based Profiler.

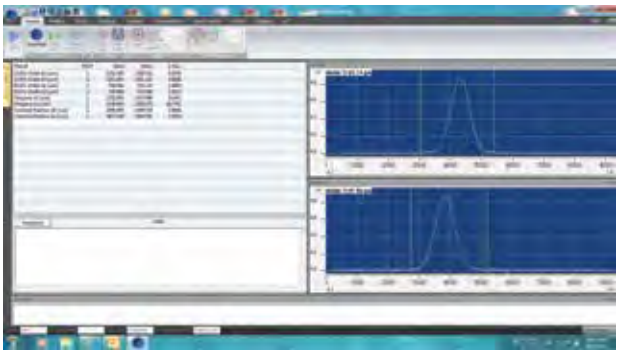
NanoScan 2s Configurable User Interface

In addition to new hardware, the NanoScan 2s has an updated integrated software package for the Microsoft Windows Platform, which allows the user to display any of the results windows on one screen. The NanoScan 2s software comes in two versions, STD and PRO. The NanoScan 2s Pro version includes ActiveX automation for users who want to integrate the NanoScan into OEM systems or create their own user interface screens with C++, LabView, Excel or other OEM software packages.

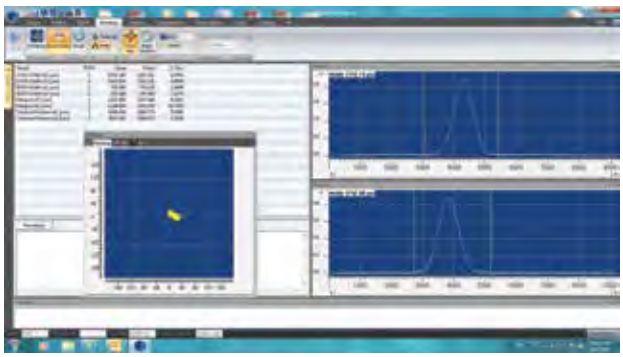


See Your Beam As Never Before

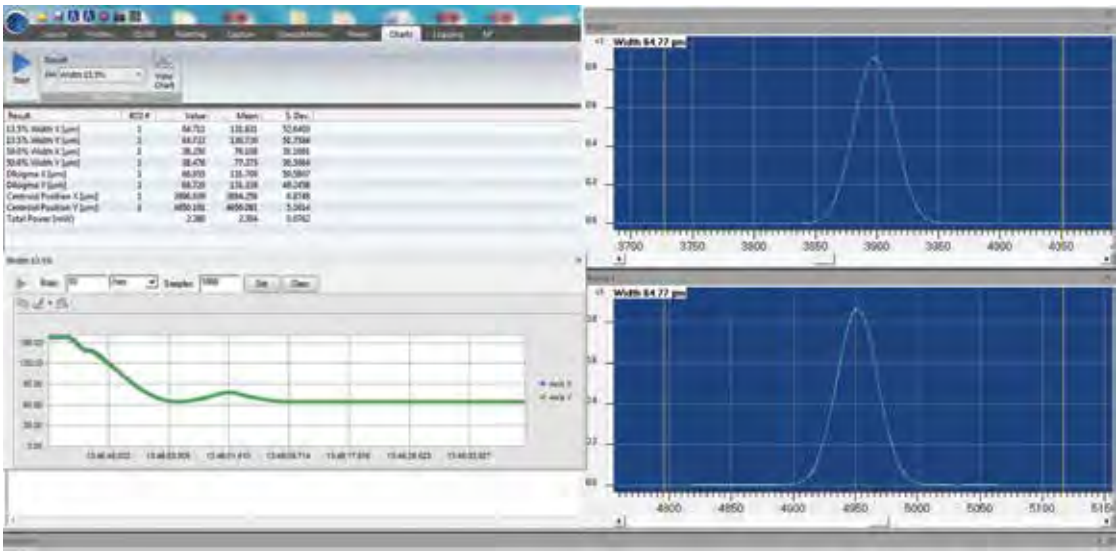
The new NanoScan 2s graphical user interface (GUI) allows the user to set the display screens to any appropriate configuration, displaying those that are of interest and hiding what is not. This means that you can have the information that you want to see, uncluttered by extraneous output, and you can have all the features you need, visible at once. The screens can be docked or floating with ribbon bars for the controls that can be visible or hidden as desired. This allows you to take advantage of a large, multi-monitor desk top or maximize the useful information on a small laptop display.



Simple docked view of profiles and numerical results



Both docked and undocked windows: profiles, results, and pointing



Example of time charts used to monitor focusing process

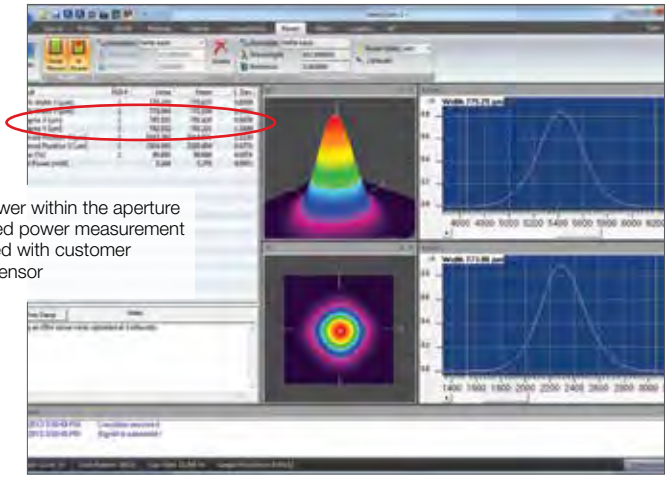
Integrated Power Meter

The silicon and germanium detector equipped NanoScan 2s systems include an integrated 200mW power meter.

The scanhead comes with a quartz attenuator window that provides a uniform response across a broad wavelength range.

This is a relative power meter that has better than 1.5% correspondence when calibrated with a user-supplied power meter and used in the same configuration as calibrated.

The power meter screen in the software shows both the total power and the individual power in each of the beams being measured.



% of power within the aperture integrated power measurement calibrated with customer power sensor

Available Detectors

The NanoScan 2s is available with silicon, germanium or pyroelectric detectors to cover the light spectrum from UV to very far infrared.

Apertures and Slits

The NanoScan 2s is available with a variety of apertures and slit sizes to allow for the accurate measurement of varying beam sizes. The slit width defines the minimum beam width that can be measured; due to convolution error, the slit should be no larger than ¼ the beam diameter to provide a ±3% accurate measurement. For this reason the minimum beam diameter measureable with the standard 5µm slit is 20µm. To measure beams smaller than 20µm it is necessary to use the small aperture 1.8µm slit instrument, providing a minimum beam diameter of ~8µm. Because these slits are so narrow, the maximum length limits the aperture to 3.5mm. Contrary to many people's beliefs, these smaller slits do not improve the resolution of the measurement, only the minimum size of the beam. Therefore, unless it is necessary to measure beams less than 20µm, one would be advised to stick with the 9mm/5µm configurations.

The Most Versatile and Flexible Beam Profiling System Available

With the available range of detectors, slit sizes and apertures the NanoScan 2s provides the maximum versatility in laser beam profiling. NanoScan 2s adds the convenience and portability of direct USB connectivity: no external controllers or power supplies required to operate the profiler. In addition the rotation mount has been redesigned to provide a stand for vertical operation, if desired. The mount can be positioned in one of two places. If vertical operation is desired the mount is positioned toward the back of the scanhead to expose the stand, which can be affixed to the optical table or stage. If standard horizontal operation is desired, then the rotation mount can be positioned in the forward configuration, maintaining the original length and size of the scanhead.

For Higher Powers, Teams up the NanoScan with the LBS-300s

In order to measure powers and energies above the limits of the NanoScan, an LBS-300s of the appropriate wavelength rang can be attached to the front of the NanoScan and measure powers up to 1000W and more.

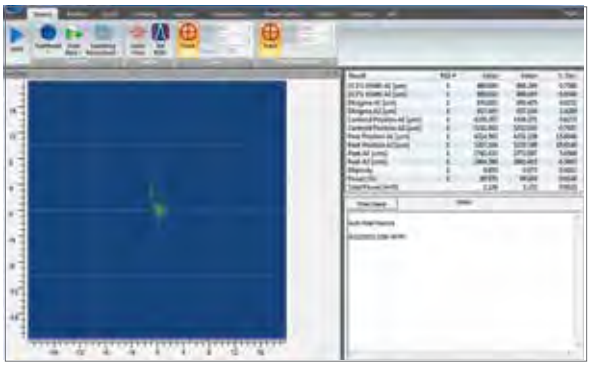
The C mount thread of the LBS-300s mates with the C mount thread of the NanoScan. There are various models of the LBS-300s ranging in wavelength from 190nm up to 1550nm and beyond. Alternatively, the Stackable Beam Splitters can be attached to the NanoScan and used to attenuate high power beams.

Measured Beam Results

From 1989 through 1996, John Fleischer, founder and past President of Photon Inc., chaired the working laser beam width ISO/DIN committee that resulted in the ISO/DIN 11146 standard. The final approved standard, available in 13 languages. The standard governs profile measurements and analysis using scanning apertures, variable apertures, area sensors and detector arrays. NanoScan 2s measures spatial beam irradiance profiles using scanning slit techniques.

Results measured include:

- Beam Width at standard and user-definable clip levels, including $1/e^2$ and 4σ
- Centroid Position
- Peak Position
- Ellipticity
- Gaussian Fit
- Beam Divergence
- Beam Separation
- Pointing Stability
- ROI Power
- Total Power
- Pulsed Laser Repetition Rate



Knowing pointing stability is a critical factor in laser performance

Result	ROI #	Value	Mean	S. Dev.
13.5% Width A1 [µm]	1	863.328	864.612	0.7082
13.5% Width A2 [µm]	1	876.317	875.622	0.9432
D4sigma A1 [µm]	1	849.062	849.700	1.5084
D4sigma A2 [µm]	1	842.054	840.924	2.3751
Centroid Position A1 [µm]	1	1.111	-0.133	0.5622
Centroid Position A2 [µm]	1	-1.730	0.275	1.2221
Peak Position A1 [µm]	1	-11.521	-19.890	5.6014
Peak Position A2 [µm]	1	4.156	8.732	6.9860
Peak A1 [cnts]	1	2812.438	2810.688	4.0486
Peak A2 [cnts]	1	2687.898	2678.320	5.5879
Ellipticity	1	0.806	0.807	0.0023
Power [%]	1	99.994	99.979	0.0273
Total Power [mW]		1.202	1.203	0.0002

Example of the many measurements that can be made and the precision you can expect

M^2 Wizard

M-squared (M^2) software Wizard is an interactive program for determining the "times diffraction limit" factor M^2 by the Rayleigh Method. The M^2 Wizard prompts and guides the user through a series of manual measurements and data entries required for calculating M^2. Used with a user-provided translation stage focusing lens and the M^2 Wizard in the NanoScan Analysis Software, the user can quickly and easily determine the times-diffraction propagation factor (M^2) of a laser. For automated and automatic M^2 measurements the NanoModeScan option is required.

Pulsed Laser Beam Profiling

In addition to profiling CW laser beams, NanoScan can also profile pulsed laser beams with repetition rate in the 10kHz range and above. To enable the measurement of these pulsed lasers, the NanoScan profiler incorporates a "peak connect" algorithm and software-controlled variable scan speed on all scanheads. The accuracy of the measurement generally depends on the laser beam spot size and the pulse-to-pulse repeatability of the laser. The NanoScan is ideal for measuring Q-switched lasers and lasers operating with pulse width modulation power (PWM) control. In the past few years, lasers with pico- and femtosecond pulse durations have begun to be used in many applications. Although these lasers add some additional complication to the measurement techniques, the NanoScan can also measure this class of laser.

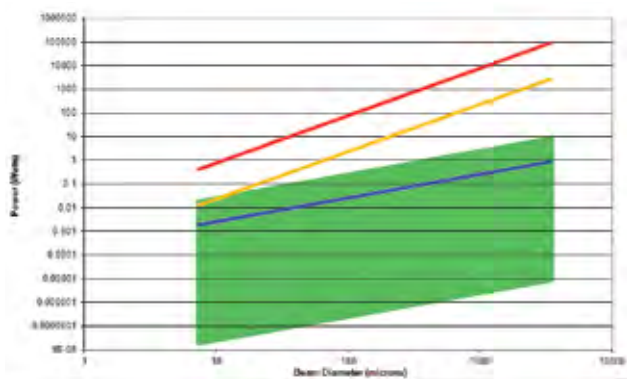
Typical NanoScan Operating Space Charts

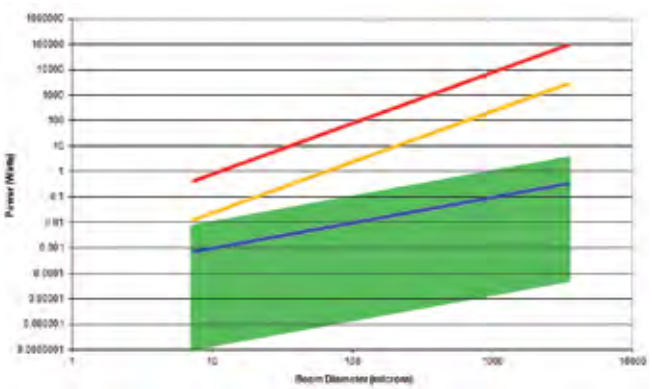
Operating range is at peak sensitivity of detector. Operating space is NOT absolute.
THESE CHARTS TO BE USED AS A GUIDE ONLY.

NanoScan Operating Space
Si/3.5mm/1.8µm



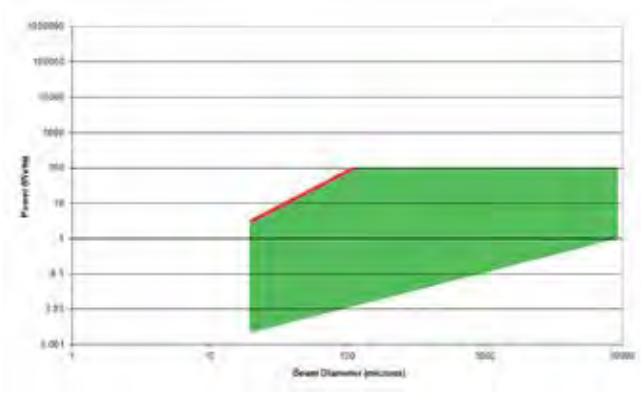
Silicon Detector: Responsivity varies with wavelength. Detects between 400-1100nm. Peak responsivity is 0.7 amps/watt at 980nm. Detector to detector responsivity variation can be as great as ±20%.

NanoScan Operating Space
Ge/3.5mm/1.8µm



Germanium Detector: Responsivity varies with wavelength. Detects between 800-1800nm. Peak responsivity is 1.05 amps/watt at 1550nm. Detector to detector responsivity variation can be as great as ±20%.

NanoScan Operating Space
Pyro/9mm/5µm



Pyroelectric Detector: Uniform in response between 0.2 and 20 microns wavelength.

Power: Average power in the laser beam.

Beam Diameter: Assumes a round beam. The operating point for an elliptic beam can be approximated by using the average diameter. For extremely elliptic beams (ratio >4:1), contact Spiricon.

Pulsed Operation (———): Upper limit of the operating space for pulsed laser measurements.

Black Coating Removed (———): Slits are blackened to reduce back reflections; blackening begins to vaporize near this line. Slits in pyro detectors are not blackened.

Slit Damage (———): Power density (watts/cm^2) where one can begin to ablate and cut the slits. Refer to Spiricon's Damage Threshold *with High Power Laser Measurements* document.

Left Boundary: The left boundary is 4 times the slit width, where slit convolution error becomes significant to the 5% level for reported 1/e^2 diameter of a TEM$_{00}$ Gaussian beam.

Right Boundary: The right boundary is the instrument entrance aperture diameter, which determines the largest beam profile and diameter that can be measured. For a TEM$_{00}$ Gaussian beam the 1/e^2 diameter needs to be ≤1/2 the aperture diameter to measure and see the entire profile out to the tails. Similarly for a Flat-top distribution the 1/e^2 diameter needs to be ≤~95% of the aperture diameter. To obtain any given clip level diameter for any beam (but not the full profile) ~95% of the aperture is useable.

3.5 Accessories for Beam Profiling

Introduction

Spiricon has the most extensive array of accessories for beam profiling existing. There are components for attenuating, filtering, beam splitting, magnifying, reducing and wavelength conversion. There are components for wavelengths from the deep UV to CO_2 wavelengths. Most of the components are modular so they can be mixed and matched with each other to solve almost any beam profiling requirement needed.

3.5.1 Neutral Density Attenuators/Filters

For almost all applications, the laser beam intensity is too high for the operating range of the CCD. Therefore ND glass attenuator filters are available to reduce the intensity to the proper level at the CCD. These filters are carefully designed not to affect beam quality or cause interference effects. One stackable ND1 filter and 2 ND2 filters are supplied standard with each c-mount camera.

Model	Stackable ND Filters ND1 / ND2 / ND3	ATP-K Variable Attenuator	UV ND Filters	Specialty Filter for 355nm
Nominal ND value	1, 2, 3	ND=1.7-4.6 Max. ND: 7.4 (with fixed 2.8 gray-glass attenuator)	0.3, 0.7, 1.0, 1.3, 1.7, 2.0, 2.3, 2.7, 3.0, 3.3, 3.7, 4.0, 4.3, 4.7, 5.0, 6.0	Pass 355nm, blocks 532nm & 1064nm

Damage threshold	~50W/cm² / 1J/cm² for ns pulses no distortion	100mW/mm no thermal lensing	100W/cm² CW, 10ns pulses, no distortion	5W/cm² no distortion
Mounting	C-Mount Threads	C-Mount Threads	C-Mount Threads	C-Mount Threads

Stackable ND filters

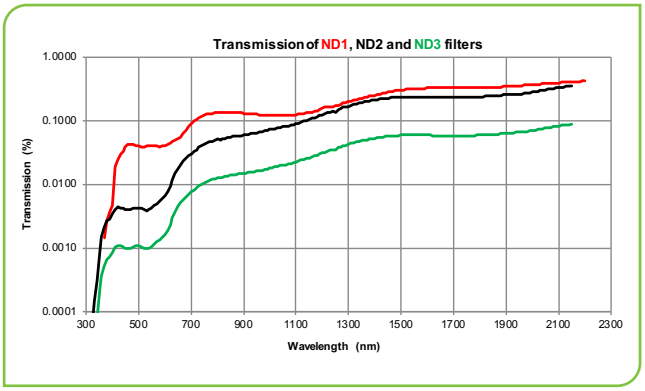
The individual filters come in three versions, the ND1 filter in the red housing with ~10% transmission in the visible, the ND2 filter in the black housing with ~1% transmission and the ND3 filter in the green housing with ~0.1% transmission. The individual filters can be screwed on top of each other and thus stacked and also can be combined with beam splitters.
They are set at a small wedge angle in the housing so as not to cause interference effects.

ND1, ND2 and ND3 stackable filters

Stackable filter showing wedge

Transmission vs. Wavelength

These bulk-absorbing "neutral density" or ND filters do not have a flat response in attenuation vs. wavelength. See the graph for typical transmission vs. wavelength characteristics.



Specifications

Model	ND1 Stackable Filter (Red housing)	ND2 Stackable Filter (Black housing)	ND3 Stackable Filter (Green housing)
Nominal ND (vis)	1	2	3
Transmission (1)	between 20% and 5%	between 7% and 0.5%	between 2% and 0.05%
Clear Aperture	Ø19mm		
Damage threshold	~50W/cm² / 1J/cm² for ns pulses		
Part number	**SPZ08234** (2)	**SPZ08235** (3)	**SPZ08253**
Notes:	(1) Depending on spectral range. (2) One ND1 filter is included in Ophir cameras. (3) Two ND2 filters are included in Ophir cameras.		

ATP-K Variable Attenuator

This option makes beam profiling easy. The ATP-K attenuates your laser without ghost reflections ,fringes and light leaks. A knob-operated variable wedges attenuation of ND 1.7 -4.6 with fixed gray-glass attenuator with ND 2.8, provides total attenuation capability of ND 7.4.

The ATP-K is also designed to be used with the HP-series, high power attenuators and beam splitters. Both types of attenuators attach directly to the ATP-K via C-mount while a Beam profiler camera is attached form the opposite side. The ATP-K has simple reproducible attenuation settings, and has a wavelength range of 360 to 2500+ nm.

Figure 1 below shows the safe average power for negligible beam distortion from thermal lensing. Absorptive filters, such as used in the ATP-K have an upper power limit of approximately 100mW per mm beam diameter. For pulsed beams, Figure 2 shows the damage threshold for energy where breakage of the glass wedge may occur. This is approximately 5J per mm beam diameter. For lasers with power or energy levels above this the first stage of attenuation will need to come from our line of high power reflective attenuators.

Specifications

Model	ATP-K
Maximum Power/Energy Handling (1)	100 mW/mm, 100 mJ total avg. Energy Damage threshold: 5J
Wavelength Range	360-2500+ nm Near flat response out to 1500nm
Attenuation Range (2)	Variable filters: ND = 1.7 to 4.6 Maximum ND 7.4 (with fixed 2.8 gray-glass attenuator)
Clear Aperture	15mm diameter
Dimensions	94 (W) x 28 (H) x 43 (D) mm
Thickness Tolerance	±0.25mm
Mounting	C-mount
Base Mount	¼-20
Part number	**PH00128**

Note: (1) Powerful laser sources may require additional attenuation prior to the beam's exposure to Model ATP-K. Additional attenuation usually is achieved by use of high-power laser mirror attenuators or clean, highquality quartz plates (recommended with slight wedge angles).
(2) ND (optical density) = log (1/T) or T=10^(-ND) where T is the fraction of light transmitted. For example, an ND of 5 transmits 0.00001 or 0.001%.

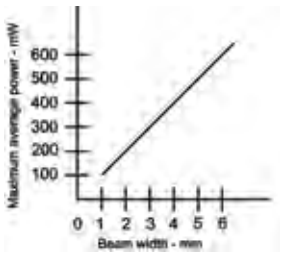


Figure 1 – Safe average power for negligible beam distortion

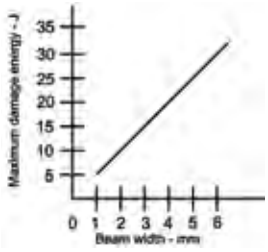

Figure 2 – Point at which damage will occur with pulsed energy

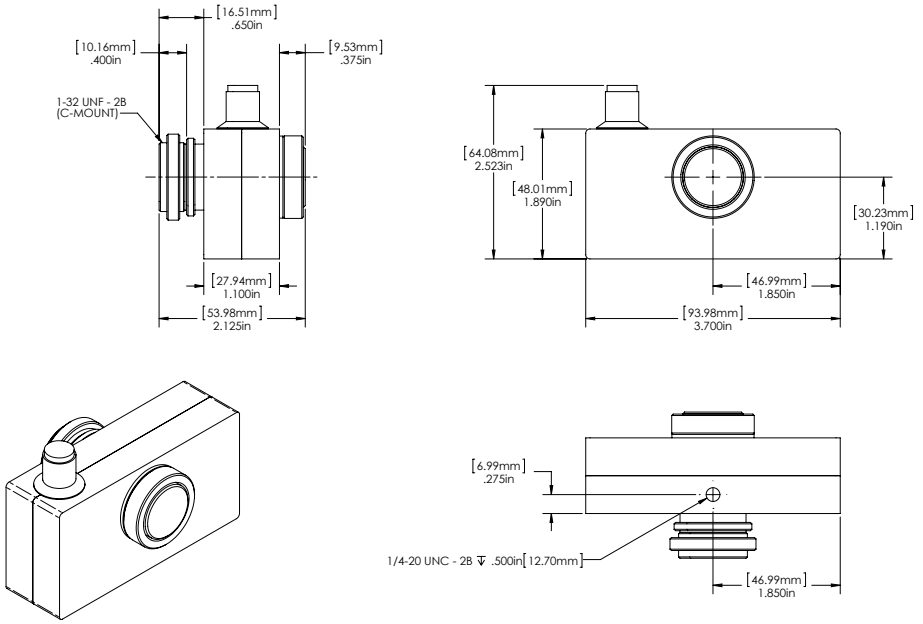
ATP-K

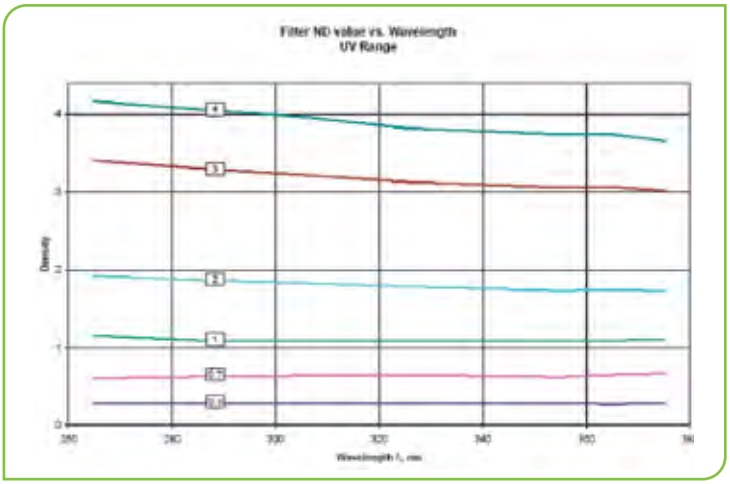


UV ND Filters

This accessory can be used with any camera fitted with C- mount threads. Simply thread the attenuator assembly into the front of the camera and then slide the ND filter arrays to get the desired amount of attenuation. This device can be used with laser outputs from microwatts to Watts. Three filter holders are provided with two filters in each holder. Each filter in the holder provides for a different value of attenuation. To use, slide the desired holder into the housing slot. A click is felt when the filter is properly aligned with the beam. The holders provided will allow for attenuation of up to ND 6.
C-mount interface for universal application to our CCD and Pyroelectric cameras
190-380nm attenuation covers Excimer, Helium Cadmium, and the Nd:YAG UV harmonic laser wavelengths. Attenuation with these ND filters permits the best use of the dynamic range of a beam profiling camera.
Attenuation range of 0.3 to 6.0 optical densities (ND).
Set consists of three slides with two filters in each slide.
The Six Filters include 0.3, 0.7, 1.0, 2.0, 3.0 and 4.0 optical densities.
Two filters can be employed at one time for 0.3 – 6.0 optical attenuation in 0.3 or 0.4 ND steps.
20mm clear aperture will not vignette any of our applicable camera sensors.
Damage threshold = 100W/cm^2 for CW lasers and 20mJ/cm^2 for nano-second pulse width lasers.
Additional Beam Splitters can be added for attenuation of high power UV lasers.
UV attenuation system uses high quality optics from the leader in laser beam diagnostics.

Specifications

Model	UV ND Filters
Nominal ND (UV)	0.3, 0.7, 1.0, 1.3 ,1.7, 2.0, 2.3, 2.7, 3.0, 3.3, 3.7, 4.0, 4.3, 4.7, 5.0, 6.0
Aperture	Ø20mm
Damage threshold	100W/cm^2 CW, 20mJ/cm^2, 10ns pulses
Filter material	Inconel
Part number	**SP90228**



Specialized Filters

There are also specialized filters available to eliminate extraneous wavelengths when measuring very short or very long wavelengths where the CCD cameras are not sensitive and the desired signal can get swamped by extraneous light of other wavelengths.
These filters are as follows:

The 355nm filter for monitoring the 3rd harmonic of YAG. This filter transmits 355nm but blocks 532nm and 1064nm.

Specifications

Model	Filter for 355nm
Transmission	~ 60 at 355mn, zero at 532nm, and 5E-6 at 1064nm
Filter Thickness	4mm
Filter Spacing	8mm
Flatness	2 waves in the visible
Damage threshold	50W/cm^2 / 0.6J/cm^2
Part number	**SPZ08246**

This filter has the same standard thread so it can be mixed with all the other components.

3.5.2 Beam Splitter + Neutral Density Filters Combo

The attenuators described before can provide a high degree of attenuation however, these neutral density attenuators cannot dissipate more than 5W or so. Therefore we often place beam splitters in front of the attenuators to reduce the intensity before the ND filters. These beam splitters are made of UV grade fused silica for use from 190 to 2500nm. Since they do not absorb light, they have a much higher power handling capacity than the ND attenuator/filters.

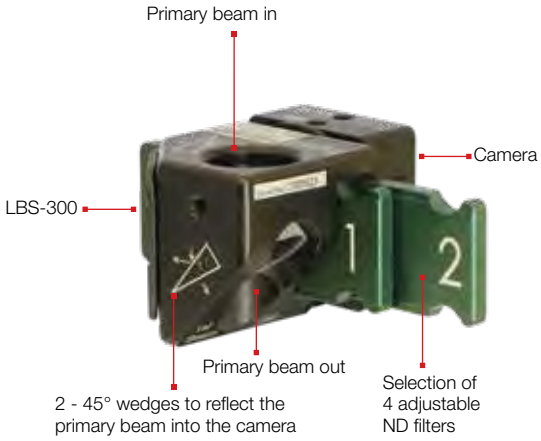
LBS-300s Beam Splitters

The LBS-300s beam splitter attachment for C-mount, CS-mount, or Ophir mount cameras allow you to measure laser beams with diameters up to 15mm and powers ranging from 10mW to ~400W (1). The beam sampler is designed so that the preferential polarization selection effect of a single wedge is cancelled out and the resulting beam image is polarization corrected to restore the polarization components of the original beam. The beam sampler operates by reflecting the incoming beam from the front surfaces of a pair of wedges through 90 degrees into the camera. Approximately 99% of the beam is transmitted through the beam sampler with 0.01% passed on to the camera. A set of adjustable ND filters are provided to make final intensity adjustments to the beam before it reaches the camera imager. If additional attenuation is needed, an external wedge may be mounted at the input port, however this 3rd wedge will cause polarization selectivity when the beam is significantly polarized different in the S and P planes. A 1.035-40 thread is provided behind each wedge along the axis of the output beam that can be used to directly mount accessories with 1" lens tubes such as beam dumps or even power and energy sensors to the LBS-300s.



(1) For Gaussian beam diameter <1/2 the clear aperture and depending on ND filter and camera saturation limits the maximum power may be as high as 1000W.

Optional SP90263 Beam Deflector

Beam Extending Negative Lenses for LBS-300s

Sometimes we want to measure the focal spot of converging beam but the focal length of the system is not enough for the beam to go through the LBS and reach the camera focal plane.
Also, sometimes the focal spot is too small for the pixel spacing of the camera. The above problem can be solved by simply screwing a negative lens on top of the LBS and thus extending the focal spot as shown in the diagram.

Model	FSA-50Y	FSA-100Y	FSA-150Y

LBS-300HP-NIR Beam Splitters

Beam Splitter for High Power Lasers NIR

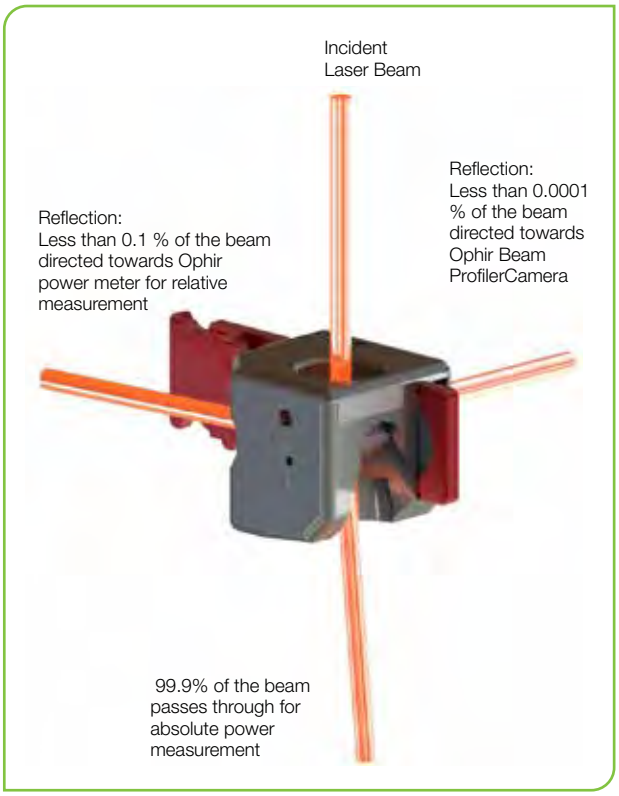
The LBS-300HP-NIR is a patent pending technology beam splitter for High Power lasers that allows measuring NIR (~1064nm) focused or collimated laser beam profiles up to **5kW** or **15MW/cm²**.

The LBS-300HP-NIR operates by reflecting a fraction of the incoming beam through the front surface of each of a pair of orthogonally oriented wedges. Less than 0.0001% (1/10⁶) of the beam is reflected towards the Ophir Beam Profiler Camera. This enables beam shape, focal spot, beam waist, M² of a high-power laser; up to **5kW** or **15MW/cm²**.

Relative power can be measured by placing an Ophir power sensor after the first wedge, thereby measuring the laser beam after being reduced to 0.1% (1/10³).

99.9% of the laser beam passes through, ideal for absolute power measurement .

Each optical path through the LBS-300HP-NIR provides uniform attenuation of any beam shape (Gaussian, flat-top, doughnut, etc.) while preserving the polarization and overall profile of the incoming laser beam thus providing accurate sample of incident beam. A 1.035-40 thread is provided behind each wedge along the axis of the output beam. These can be used to directly mount accessories with 1" lens tubes such as beam dumps or power/energy sensors.



Specifications

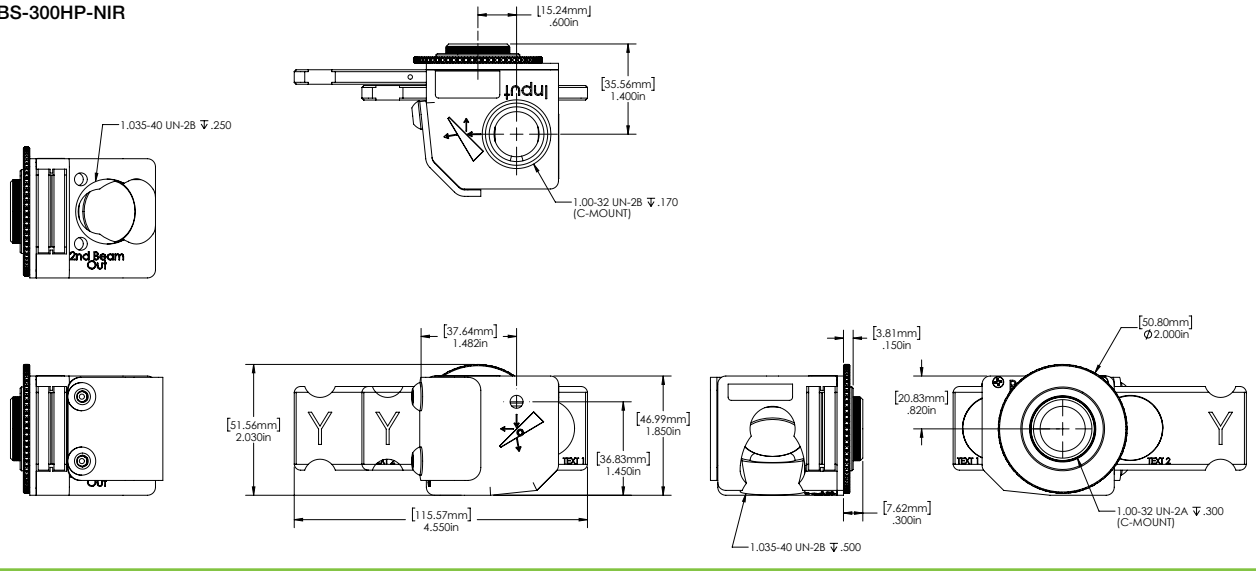
Power Sensors	Compatible with most Ophir sensors	See catalog pages 67-74, 81

Note:
(1) Although the LBS-300HP-NIR is designated for 1000nm -1100nm, the real spectral range is significantly wider and covers 500nm-1500nm range. However, the spec above refers only to designated wavelength and can't be guaranteed for out of the range wavelength. Red alignment laser can also be used with LBS-300HP-NIR for alignment and targeting.
(2) 15 MW/cm² was maximal power density that was tested. Actual Maximum Power Density may be higher.
(3) ND bulk absorbing filters damage threshold is 5W/cm² for beam size 5mm, 10W/cm² for 2mm beam and >30W/cm² for 1mm beam.

LBS-300HP-NIR



LBS-400 Beam Splitters

The LBS-400 beam sampler attachment for various large array cameras allow you to measure UV, NIR or IR wavelength laser beams with diameters up to 1 inch (25.4mm) and powers ranging from 10mW to ~500W (1). The beam sampler is designed so that the preferential polarization selection effect of a single wedge is cancelled out and the resulting beam image is polarization corrected to restore the polarization components of the original beam.

The beam sampler operates by reflecting the incoming beam from the front surfaces of a pair of wedges through 90 degrees into the camera. Approximately 99% of the beam is transmitted through each beam sampler with 0.01% passed on to the camera. A set of adjustable filters are provided to make final intensity adjustments to the beam before it reaches the camera imager.

(1) For Gaussian beam diameter <1/2 the clear aperture and depending on ND filter and camera saturation limits the maximum power may be as high as 1200W.

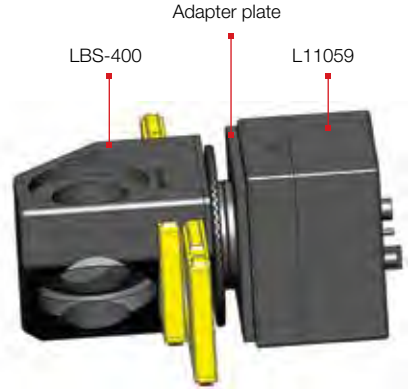
Accessories

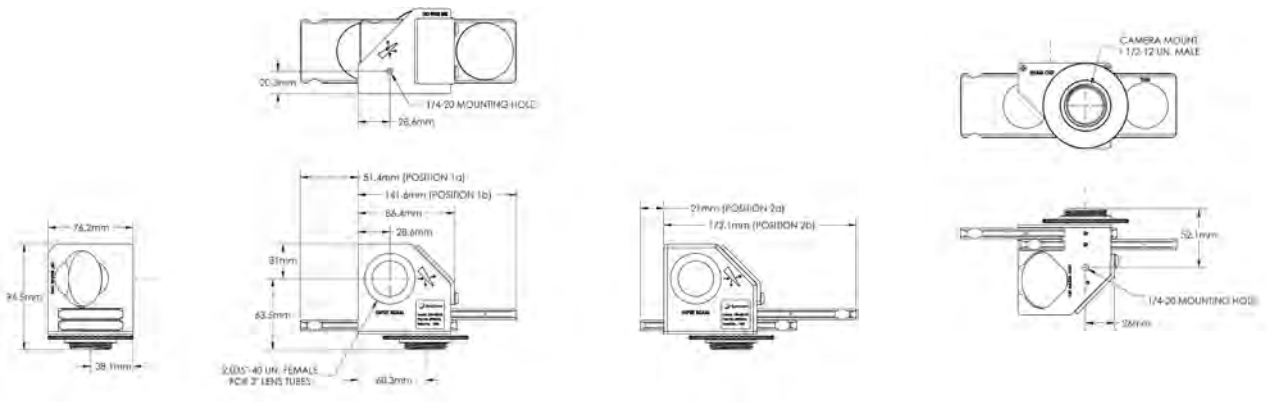
Every LBS-400 comes with a user specified adaptor plate. Please choose at time of purchase		
LBS-400 C-Mount Adapter	Adaptor plate to mount C-Mount devices to LBS-400	**SP90352**
LBS-400 to L11059 Adapter	Adaptor plate to mount L11059 camera to LBS-400	**SP90439**
LBS-400 to Pyrocam™ Adapter	Adaptor plate to mount Pyrocam IV camera to LBS-400	**SP90510**
LBS-400 to WB-I Adapter	Adaptor plate to mount WB-I to LBS-400	**SP90572**

Note: (1) ND filters should be used at 5W/cm² for beam size 5mm, 10W/cm² for 2mm beam and >30W/cm² for 1mm beam to avoid thermal lensing effects.

LBS-400 mounted to Pyrocam IV

Accessory adapter plate





LBS-100 Attenuator

The LBS-100 system that is not as compact as the LBS-300s above but has larger aperture, and has versions for longer wavelengths. The system contains the mounting frame, 1 wedge beam splitter and several attenuators. The exit end of the LBS-100 is standard C mount thread so all our cameras can be mounted to the frame. The wedge angle is 6.5 degrees to insure that the reflection from the rear side will not enter the camera. The optical elements are flat to 1/4 wave in the visible to ensure no distortion of the beam.

Beam Tap I & II

- Dual surface reflector for equalizing S & P polarization
- The two planes of reflection are orthogonal

Single Surface Polarization Problems

A single surface reflection at 45° is often used to sample a laser beam for profile measurements or for monitoring power or energy. However, as shown on page 227, at 45° a single surface reflects the S polarization component at more than 10 times the reflection of the P component. Depending on the laser polarization content, or stability, this sampling can provide very misleading and unreliable measurements. (The BT-I-YAG has both surfaces A/R coated for 1064nm so the reflection for both polarizations is equal at 0.5%. At other wavelengths far from 1064nm the above discussion applies).

Equalizing S & P reflected polarization

Any arbitrary polarization component can be broken into equivalent S & P components. With complimentary sampling surfaces any given component gets reflected once as the S polarization, and the second time as the P polarization. Thus using 2 surfaces, the total reflected energy for all polarization components is the sum of the S reflectance and the P reflectance. This causes the sampled beam to have S & P components that are identical to the original beam.

Beam path through beam tap

The Beam Tap II uses two reflecting surfaces such that the two planes of reflection are orthogonal. The standard Beam Tap I rear surface is AR coated from 400-700nm.

This diagram shows the 6mm offset of the through beam that is created by the reflecting optic. The deflection angle of the output beam is less than 0.007 degrees. The rear surface of the flat is AR coated to maximize the throughput of the main beam. The standard Beam Tap II rear surface is AR coated for 400nm-700nm. The YAG version is AR coated for 1064nm on both surfaces.

Beam tap reflection vs wavelength

Shown is the Beam Tap II final sampled reflection vs. wavelength.
As shown both the S & P reflection are nearly constant at 0.05% from the UV to the infrared.

(See figure 7 in the Beam Tap manual in our website)

Stackable Beam Splitters

The stackable beam splitters are designed for maximum modularity and shortest beam path. They are compatible with almost all of our cameras having the standard C mount thread and can mount either to other attenuators or to the camera itself. Each beam splitter reflects ≤6% of the incoming beam and allows approximately ≥94% of the beam to pass directly through. By stacking 2 splitters ≤6% of ≤6% or 0.36% of the original beam intensity is directed into the camera. The beam splitters are mounted at 45 degree over the fixed or variable attenuators with a simple fastening ring and can be oriented in any direction with the beam coming from right, left, up, down, or front. The Beam Splitters will operate for wavelengths from 193nm - 2500nm. Damage threshold is >5J/cm^2 for 10ns pulses.

An optional Ø30mm clear aperture splitter allows for larger diameter incoming beams. Caution: Beam convergence and power density must be known at the imager so you don't overflow the imager size and maximum power density at the imager.

A different set of stackable beam splitters are specifically coated for optimization at 1064nm. Each beam splitter reduces the intensity to 1% of the input Beam. 2 stacked splitters will produce a sampling Beam with 0.01% intensity of the original beam.

The wedge angle of 10 degrees insures that only the reflection from the front surface will appear on the camera with no double images. The user must insure that there are beam stops for the transmitted and reflected beams.

Note that if possible, the user should use an even number of beam splitters so as to cancel any possible polarization effects.

For converging beams, a larger aperture splitter can be used either by itself or stacked (as shown)

SPZ17015 + SPZ17025

Single and Dual Prism Front-Surface Beam Samplers

The Prism Front-Surface Beam Sampler (PFSA) is a C-mount fixture housing a UV-Grade Fused Silica right angle prism, used for sampling the front surface reflection for high power/energy beam-profiling applications. Reflection at nominal incidence of 45°is polarization and wavelength dependent, with 532nm s-polarization reflected at 8.27%, and p-polarization at 0.68%.

The system is available as either a single prism (PFSA) or dual orthogonal prism (DPFSA) unit. The dual orthogonal prism configuration results in polarization independent reflection of 0.057% at 532nm. Other filters and attenuators can be attached using the C-mount female threads at the input end. The use of a right-angle prism to sample the incident beam guarantees that any scattered secondary beams do not interfere with measurement, as shown in the sketch.

Dual Prism Front Surface Sampler

Two Single Prism Front Surface Samplers mounted on a ATP-K Attenuator

Specifications

Model	PFSA		DPFSA	
Wavelengths	200nm to ~2.5µm		200nm to ~2.5µm

3.5.4 Beam Expanders Microscope Objectives

Model	Beam Expander	4X Beam Expander with UV Converter
Wavelengths	4X : 340-1800nm 6X, 12X, 22X: 530-1100nm	193nm-360nm
Beam Size Change	4X, 6X, 12X, 22X	4X Expansion
Clear aperture	1/4 the size of the CCD imager	
Mounting	C or CS Mount Threads	

Beam Expander

Beam expanders are designed to work with C-mount threaded cameras that have 4.5mm imager back focal spacing or with CS (12.5mm) back focal spacing. The 4X beam expander is an expanding telescope that images the beam as it looks at 8mm from the end of the expander onto the CCD while enlarging the image 4X. In addition to the 4X beam expander, other microscope objectives are available for expanding the beam even more. There are objectives for 6X, 12X, and 22X expansion. The various expanders allow the use of our 2% and 10% filters as well as the variable attenuator so as to accommodate the camera to a wide range of source intensities.

With a camera having 4.4µm pixel spacing using the beam expander, the effective resolution can be as good as 0.5µm. The object plane that is imaged onto the CCD is located several mm in front of the assembly so even hard to get to focal spots and other small images are easy to image. The beam expanders are designed to accommodate up to 3 screw on filters or a variable attenuator behind them so a wide range of intensities can be accommodated.

For intensities too large to be accommodated by just filters, beam splitters are available to reduce the intensity before the beam expander. The beam expander is primarily intended for nonparallel beams such as focal spots and fiber tips. If small parallel beams are imaged, interference effects may occur.

The 4X Beam expander can also be fitted with a UV converter plate at its object plane so that you can look at small beams in Wavelengths 193-360nm and expand them 4X.

Camera with 4X beam Expander (SPZ12022)

Camera with 12X Expanding Microscope Objective (SPZ08259)

Specifications

Model	4X	6X	12X	22X
Wavelengths	340 - 1800nm	530 - 1100nm	530 - 1100nm	530 - 1100nm
Distance from lens barrel to focus	8mm	16.7mm	10.7mm	3.3mm
Distance from focus to 1st beam splitter	25mm	13mm	12mm	20mm
Distance of closest approach to focus with 2 beam splitter	85mm	73mm	72mm	80mm
Total length of assembly (without beam splitter)	50mm	107mm	101mm	102mm
Total length of assembly (With 2 beam splitter)	122mm	153mm	133mm	133mm

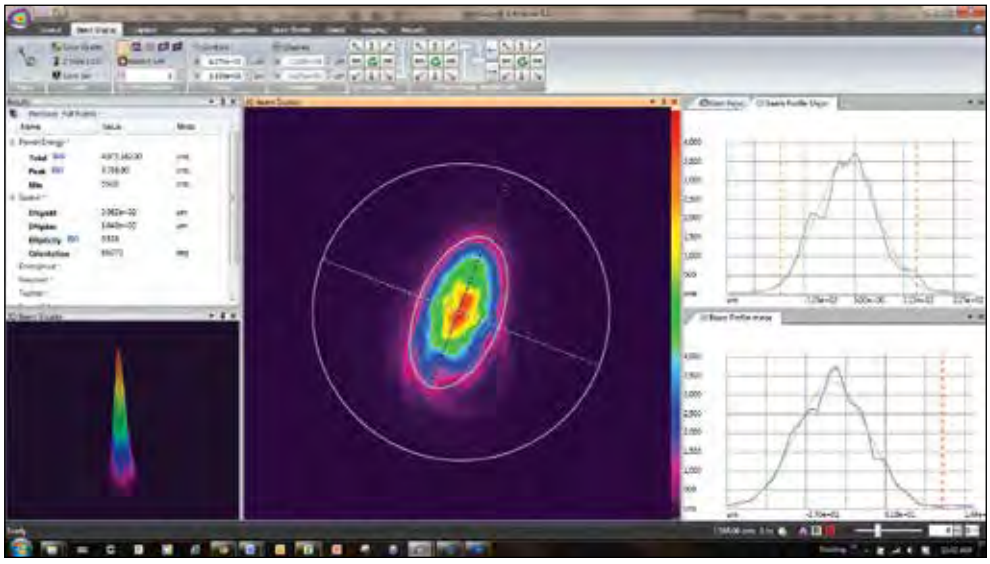
Accessories

Spacer Set	Spacer set for connecting microscope objective 6X/ 12X/ 22X to 4.5mm, CS mount cameras	**SPZ08261**
Beam Splitter for 4X Expander	45 degree angle wedge beam splitter which mounts onto beam expander. Reduces beam intensity by ~20 times. For spectral range 190 – 2500nm. Introduces 35mm extra beam path to object plane	**SPZ17027**
Additional beam splitter	Additional beam splitter to mount to 1st beam splitter	**SPZ17026**

Camera with 4X Beam Expander
SPZ17022 and SPZ17027 Beam Splitter

Camera with 4X Beam Expander
SPZ17022, SPZ17027 Beam Splitter
and SPZ17026 Beam Splitter



Shown is an image of the tip of a single mode fiber measuring 16µm by 30µm in the two axes.
The beam width as measured on the profiles shows 4X the actual size so we can measure to a resolution of ~2µm.

4X Beam Expander with UV converter

The UV converter is a UV sensitive fluorescent plate that can be mounted over the 4X Beam Expander.
The plate is positioned at the object plane of the 4X beam expander, 8 mm in front of the unit. When UV light at 193-360nm hits the plate, it absorbs the UV and re-emits visible light proportionate to the incident UV light. This light pattern is then expanded 4 times and imaged onto the imaged onto the C-mount camera.

Camera with 4X Beam Expander
and UV Image Converter

Specifications

Model	4X Beam Expander with UV converter
Beam Reduction	4X expansion ±2% with included correction factor
Wavelengths	193 - 360nm
Resolution	15µm x 15µm;
Minimum signal	~50µJ/cm²
Saturation intensity	~30mJ/ cm² at 193nm, ~15mJ/cm² at 248nm 20 times greater with optional beam splitter
Effective Aperture	1/4 the size of the CCD dimensions
Damage threshold	0.1J/cm² w/o beam splitter, 2J/cm² w/ beam splitter
Dimensions	Ø31mm dia x 120mm length
Part number	**SPZ17022 + SPZ17019**

4X Reimaging Beam Reducer

The 4X Beam Reducer is an imaging system that images the plane 30cm in front of the reducer onto the camera CCD sensor while reducing the size 4 times and inverting it. The beam reducer uses the 3 screw on attenuators provided with the camera. Since the intensity of a beam after reduction will be increased by 4x4=16 times, it is advisable to attenuate the beam more than you would without beam reduction. This can be done with additional external beam splitters and attenuators which are available (see ordering information).
Note that the custom designed beam reducer gives better image quality than tapered fibers since it does not introduce graininess or uneven pixel response. Also the image distortion of ~1% is considerably lower than with most tapered fibers. The beam reducer is not compatible with CS mount cameras.

Specifications

Model	4X beam reducer
Wavelengths	360-1100nm
Antireflection Coating	Antireflection coating optimized for 1064nm and 532nm
Beam reduction Accuracy	± 3%
Size	Ø60 mm dia x 94mm length
Aperture	50mm
Maximum Beam Size	SP920s: 28x21.2mm
Distortion of Beam	Less than 1% over 80% of diameter
Damage Threshold	30mJ per pulse for nanosecond pulses
Part number	**SPZ17017**

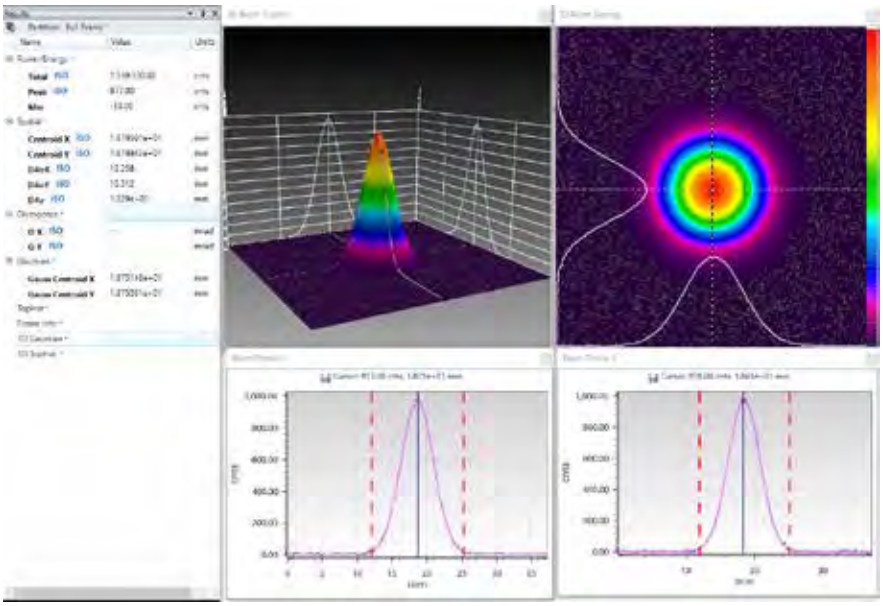
Accessories

LBS-100 to 4X beam reducer adapter	This adapter enables mounting of the LBS-100 beam splitter / attenuator assembly in front of the 4X beam reducer. The combined assembly can image large high power beams in one unit	**SPZ17029**
Beam splitter large wedge	Wedge, UVFS, 44X32 mm, uncoated wedge housing mounts to 1/4" thread, 1/2" diameter laboratory rod (not included)	**SPZ17018**

The 4X beam reducer can be combined with the LBS-100/ LBS- 300s/ LBS- 400 beam splitter/attenuator system to attenuate higher power beams before reducing them in size

Optional large wedge beam splitter (SPZ17018)

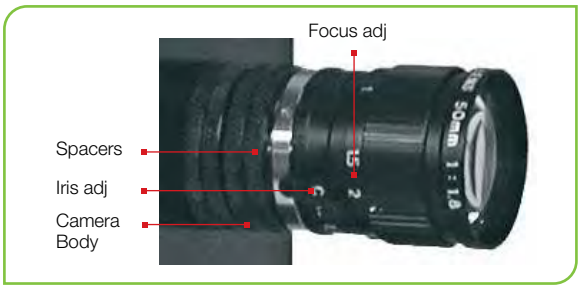
LBS-100 (SPZ17029) + LBS-100 combined with 4X beam reducer (SP90061+SPZ17017)

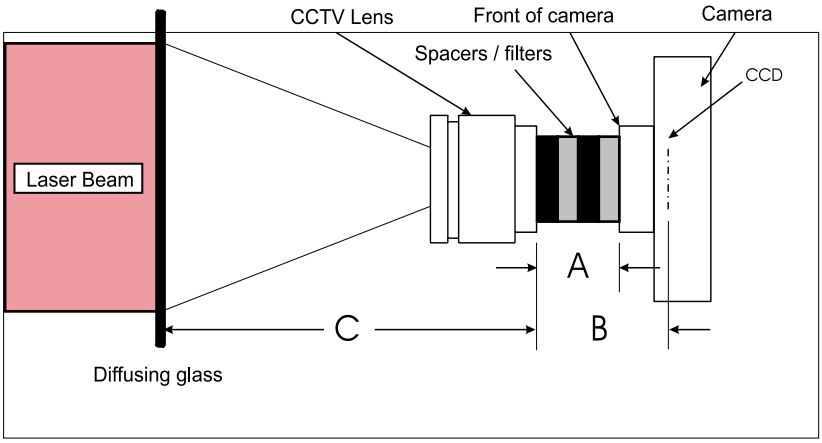


Shown is an image of a laser with beam diameter of 13mm. As can be seen, it is easily seen with the SP920s camera with the 4X beam reducer.

3.5.6 CCTV lens for front imaging through glass or reflected surface

When direct imaging in front of the camera, for example, an image projected onto a diffusing surface, such as a ground glass plate, it is necessary to reduce the image so that it completely fits onto the CCD chip surface. The 25mm and 50mm CCTV lenses image an object from a given plane in front of the lens onto the CCD while reducing the size. The lens can image such objects at distances from about 10cm in front of the lens (20cm for the 50mm lens) to 1 meter or more depending on the distance from the lens to the camera. The distance from lens to camera depends on the camera type and spacers placed between the lens and the camera.





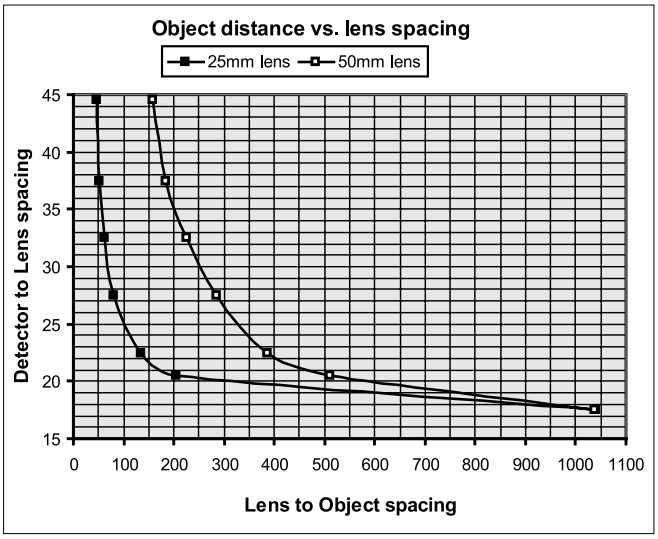
A - Total length of spacers added to system

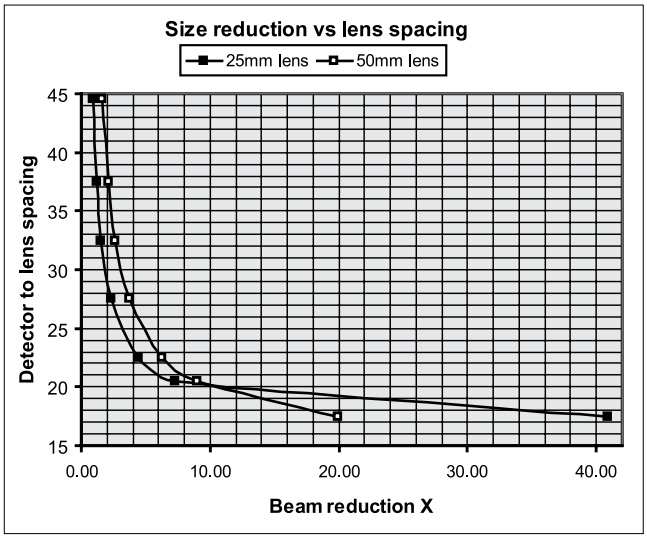
B - Detector to Lens spacing. Distance 'A' plus the CCD inset for the camera type

C - Lens to Object spacing

CCD inset for Camera Types

C mount (Camera front to CCD = 17.5mm) for nominal lens magnification, use without spacers.
CS mount (Camera front to CCD = 12.5mm) for nominal lens magnification, use 5mm spacer.
SP mount (SP cameras. Camera front to CCD = 4.5mm) for nominal lens magnification, use with 13mm spacers.





Ordering Information

Item	Description	P/N
25mm focal length CCTV lens kit	25mm focal length lens assembly with locking iris and focus adjustment. Includes 1 ea - 8mm spacer and 2 ea -5mm spacers	SP90085
50mm focal length CCTV lens kit	Same as above except 50mm focal length lens	SP90038
4mm spacer	Screw on spacer to add 4mm spacing to optical system	SPG01698
5mm spacer	Screw on spacer to add 5mm spacing to optical system	SPG02106
8mm spacer	Screw on spacer to add 8mm spacing to optical system	SPG02067

3.5.7 WB-I: Wide Beam Imager

The Ophir Wide Beam Imager: **WB-I** a compact, calibrated accessory for beam profiling cameras, provides a way to measure both size and power distribution of a divergent and large diameter beam coming from sources such as VCSEL, LED as well as parallel beams. It employs a 45mm diffusive plate onto which the beam from the light source is projected. This image is then reduced by 8 times and is reimaged onto the camera focal plane.

VCSELs, LEDs and fiber lasers are used in many sensitive applications. To guarantee the high quality of the devices, it is essential to analyze the beam profile, but those wide, divergent beams place specific requirements on the measurement system:

- The apertures of conventional beam profilers are too small to collect the entire spot of large or divergent light sources.
- Diverging beams cannot be accurately measured with regular detectors because the quantum efficiency of the detector is highly dependent on the angle of incidence.

Compact, ruggedized, and portable design of WB-I enables on-site service of beam profiling of VCSELs and LED systems at the customer site as well as operation at production lines and R&D labs.

- Divergent beams measurement significantly improved due to the possibility of up to 70° angle measurement, compared to 15°of standard beam profiler sensors.
- WB-I accessory, together with the camera and the BeamGage software, provides real-time beam shape analysis and visualization of changes of the beam shape due to different currents can be easily detected.
- Variable attenuation, via set of interchangeable filters or iris enables measuring wide range of light sources of different emitting powers.

Designated for R&D, Production and Service in following fields: Data Telecommunication, Automotive, Remote sensing, Face and gesture recognition

Typical light sources: VCSELs, LED, Wide laser beams, fibers

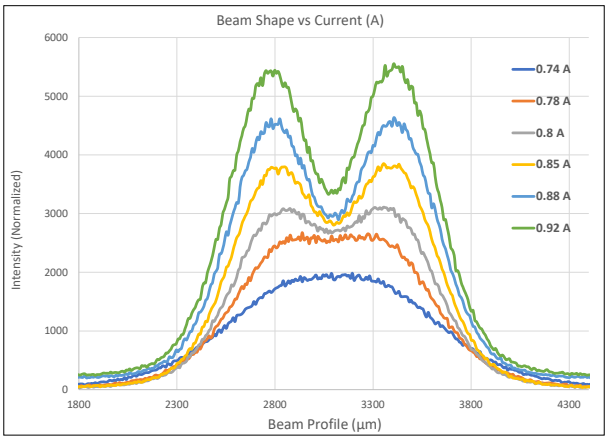
Typical measurements: Far Field energy distribution, Divergence, LIV sweep test VCSELs (beam profile vs current (A))

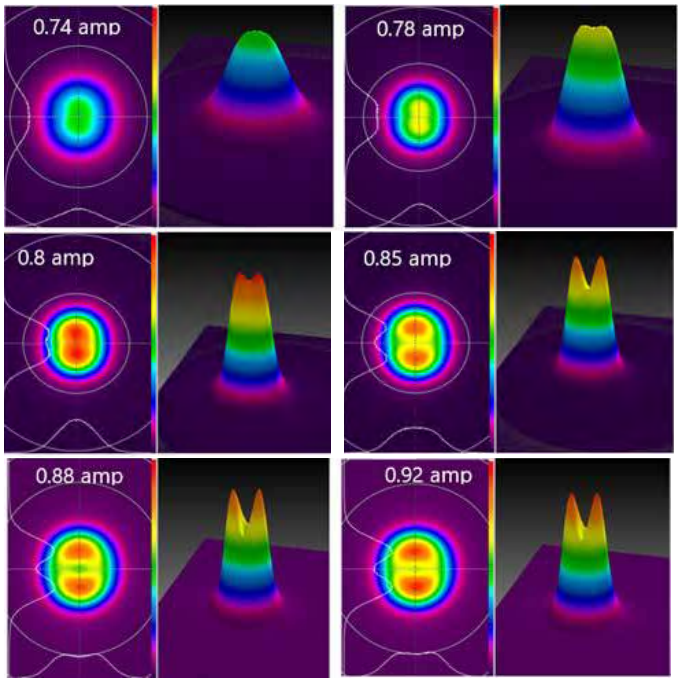
The WB-I accessory comes in 2 versions: UV-VIS-NIR (350-1100 nm) or SWIR (900-1700nm) designated for Eye- Safe, IR applications.

The WB- I is purchased without camera. For a complete solution that includes BeamGage Professional imaging and analysis software, high-resolution camera can be added.

Application example:

VCSEL energy distribution directly depends on parameters such as current, pulse width and repetition rate and temperature of the device. Therefore, it is essential to measure the angle distribution of VCSELs at various stages of the manufacturing process as well as in R&D and field service. VCSEL behavior on the LIV sweep test: VCSELs are in a so called “LED mode” when there is only a low current applied. Once the current applied to the VCSEL rises, its beam profile changes to “Laser mode”:





WB-I VIS:

- UV-VIS-NIR (350-1100nm) Wavelengths
- Attenuation by accompanied ND filters (ND1 and ND3) and by variable iris
- Operates with Ophir standard SP932U camera (purchased separately)

WB-I SWIR:

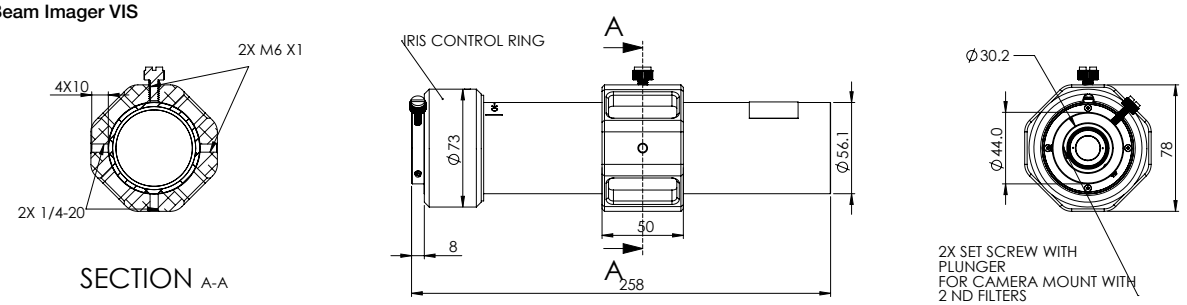
- SWIR (900-1700nm) Wavelengths
- Attenuation by variable iris control (ND filters not needed)
- Operates with Ophir InGaAs SP1203 camera (purchased separately)

Specifications

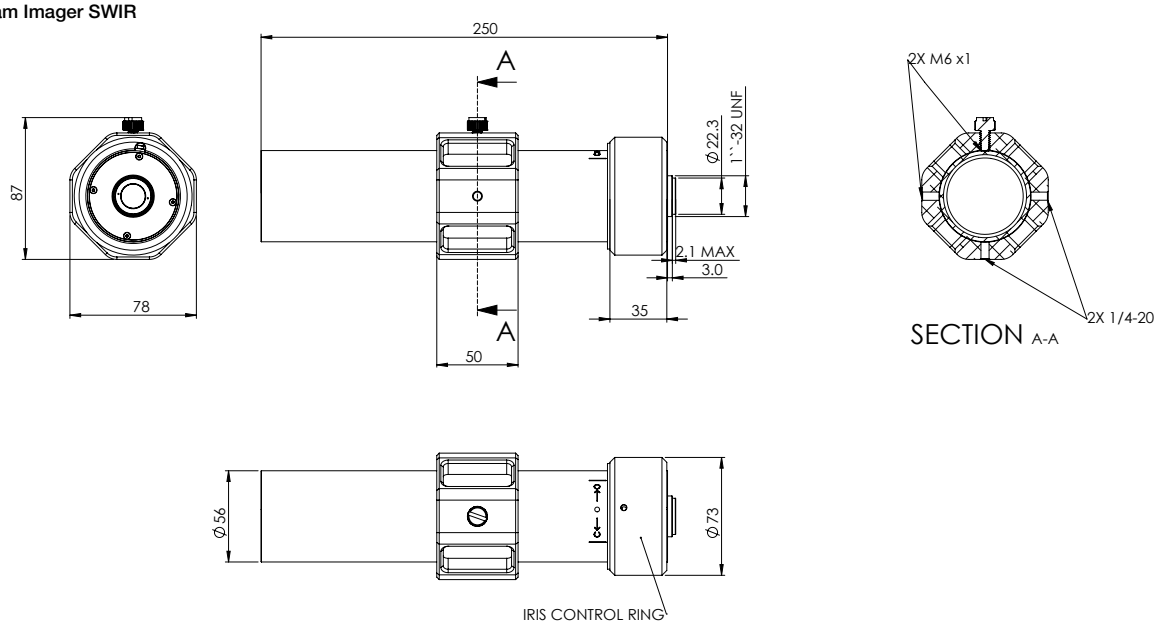
Model	Wide Beam Imager VIS	Wide Beam Imager SWIR
Wavelengths	350 (1)-1100nm	900-1700nm
Active area (2)	Ø45mm	Ø45mm
Beam sizes (2), (3)	10mm– 45mm	10mm– 45mm
Angle of incidence	<70°	<70°
Minimum detail (4), (5)	0.5mm	0.5mm
Lowest measurable signal	100µW/cm² (6)	3µW/cm² (With Iris fully opened at 1550nm)
Maximum power exposure CW (7)	200W unlimited, 1000W for 1 minute	50W unlimited time
Maximum energy exposure (8)	For ns pulses 1.5J/cm²	N/A
Imager recess supported	4.5mm	17.5 mm (C-Mount)
Camera model recommended	SP932U	SP1203
Dimensions	L=265mm X Ø57mm (Ø73mm Iris control)	L=265mm X Ø57mm (Ø73mm Iris control)
Weight (with support)	0.6 kg (0.8 kg)	0.6 kg (0.8 kg)
Part number	**SP90612**	**SP90605**

Notes:
(1) Camera response down to 350nm. Below this, flourescence of screen will be imaged
(2) Limited to 43 mm in Y direction by camera sensor
(3) 5mm possible with reduced accuracy
(4) For low contrast artefacts, due to blur effect (~0.8mm)
(5) Small diameter evaluation error is < 5%, decreases proportionally with increased diameter
(6) With two ND1 filters mounted on camera
(7) For WB-I VIS: 20% is backward scattered, WB-I SWIR: 50% is backward scattered
(8) At 1.064µm. For wavelengths below 0.9µm, derate to 40% of above , for <0.4µm to 20%

Wide Beam Imager VIS



Wide Beam Imager SWIR

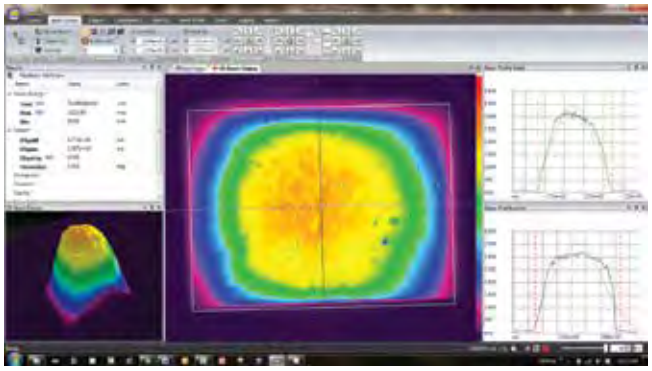


Integral Reimaging UV Image Converters

The UV image converters are fluorescent plates that convert UV radiation that is poorly imaged by silicon cameras into visible light that is then imaged onto the CCD of the camera. These fluorescent plates are specially designed for UV conversion and have a high light output, wide linear dynamic range and high damage threshold.
There are 3 versions available:

1. The 4X UV image converter is a screw on telescope for large beams that converts to visible and then images onto the CCD while reducing the beam size 4X.
2. The 4X expander with UV converter converts 193 - 360nm to visible and images a beam enlarged 4X onto the CCD.
3. The 1:1 UV image converter is a crew on telescope that convert 1:1 UV image to visible and images the beam onto the CCD without changing the size, fits 4.5mm recess and CS cameras.

All of the above imagers allow a beam splitter to be mounted at 45 deg angle in front of the imager so as to allow imaging of higher power/energy beams.



Shown here is a profile of a 355nm UV laser. The beam is converted to a visible wavelength, reduced in size and imaged by the beam profiling camera

Cross section of 4X reducing UV image Converter

Specifications

Model	4X UV Image Reducing Converter	1X UV Image Converter	4X Beam Expander with UV converter
Beam Reduction	4X reduction ±2% with included correction factor	1:1 imaging ±2% with included correction factor	4X expansion ±2% with included correction factor
Resolution	50µm x 50µm	35µm x 35µm	15µm x 15µm
Wavelengths	193-360nm		
Minimum signal	~1µJ/cm² with blank filter		
Saturation intensity	~30mJ/cm² at 193nm, ~15mJ/cm² at 248nm with included filter 20 times above values with optional beam splitter	~15mJ/cm² at 193nm, ~20mJ/cm² at 248nm with included filter, 20 times greater with optional beam splitter	~30mJ/cm² at 193nm, ~15mJ/cm² at 248nm 20 times above values with optional beam splitter
Effective Aperture	Ø30mm but effective beam size is limited to 4X CCD dimensions	Ø18mm but effective beam size is limited to CCD dimensions	1/4 the size of the CCD dimensions
Damage threshold	100W/cm² or 2J/cm² with beam splitter

3.5.9 Integrated Solutions

Ophir has an unparalleled collection of cameras, beam splitters/attenuators, beam expanders, beam reducers, UV to visible light converters, and other components that allow you to profile almost any beam desired. You can profile powers up to thousands of watts using our beam attenuators. You can profile a very wide range of wavelengths from far UV to far IR. You can profile a focal spot of a converging beam or a diverging beam.

We recommend using "Beam Profiler Finder" to find the optimized configuration that best meets your specific needs: **www.ophiropt.com/laser--measurement/beam-profiler-finder** or consult Ophir representative.

Ophir provides adapters that allow you to easily attach and align these devices to each other as shown below.

3.5.10 Optical Camera Trigger

The Optical Camera Trigger is an optical sensor that detects pulsed light sources and generates outputs to trigger a camera. The front aperture of the Optical Trigger must be directed at a light source that provides the necessary properties for trigger activation (e.g. a laser flash lamp, a pick-off source from the main laser beam, or similar). The light source may be a direct or indirect pulsed waveform.

The Optical Trigger system is supplied with a C-Mount adapter, a ¼-20 adapter, M6-1.0 adapter, or Through-Hole adapter options which allows attachment of the Optical Triger in a multitude of mounting configurations. One trigger cable and one mount option comes with the photodiode trigger. Specify one of each at time of order. See user guide for camera specific mounting options.

Camera Based Near-Field Profiler

- Allows measurement of beams normally too small for camera profiler
- Expands beam to reduce power/energy density
- Provides near-field profile of fibers, LD junctions, and other small sources
- Can be used to measure tightly focused beam with camera and attenuation
- Nominal 10X, 20X, 40X, 60X Beam expansion available
- Easily calibrated to provide absolute measurement values
- Built-in continuously variable attenuation
- C-mount for attachment to any silicon CCD camera profiler
- Camera and BeamGage software purchased separately

Near field profiling can also be used with camera profilers to analyze small beams, and involves a microscope objective lens to image the beam onto a camera detector array. This technique expands the measurement range of the camera to include smaller beams, which could not be ordinarily measured due to the pixel size of the detector array. Near field profiling is performed in fiber and waveguide analysis, lens characterization, and other applications where beams 50 microns or smaller are analyzed. While there are more accurate techniques to measure these beam sizes, the camera provides two-dimensional information that cannot always be obtained through knife-edge or scanning slit methods. This camera accessory includes base plate for mounting camera and Microscope Objective, ATP-K variable attenuator, 50mm C-Mount and an 8mm and 5mm spacer. User selectable magnification lenses, camera and BeamGage must be purchased separately.

The near field of the test beam or sample is imaged with the microscope objective lens and relayed to the camera. The bracket mounting fixture holds both the lens and camera, which itself can be mounting on a positioner or optical rail. This complete system provides everything necessary to perform near-field measurements right out of the box.

3.7 What is M²?

M^2 or Beam Propagation Ratio, is a value that indicates how close a laser is to being a single mode TEM_{00} beam, which in turn determines how small a beam waist can be focused. For the perfect Gaussian TEM_{00} condition the M^2 equals 1.

For a laser beam propagating through space, the equation for the divergence θ_0 of an unfocused beam is given by:

$\theta_0 = M^2 4\lambda/\pi D_0$ (D_0 is the waist diameter of the laser beam)

For a pure Gaussian TEM_{00} beam M^2 equals 1, and thus has no impact on the calculation. The calculation of the minimal beam spot after the lens is then:

$d_0 = 4\lambda/\pi\theta$ (θ is the beam divergence after the lens)

Again with M^2 equal to 1, the focused spot is diffraction limited. For real beams, M^2 will be greater than 1, and thus the minimum beam waist will be larger by the M^2 factor.

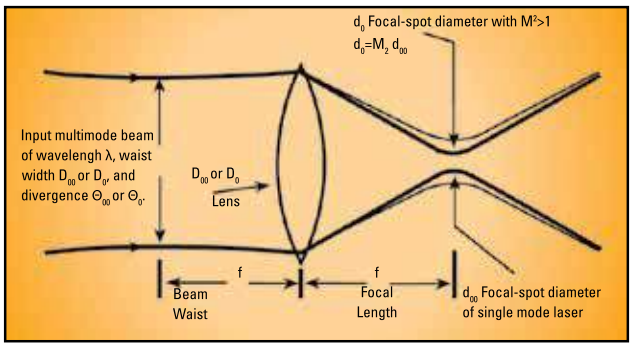

Figure 1 - Characteristics of a laser beam as it passes through a focusing lens

How is M^2 measured?

M^2 cannot be determined from a single beam profile measurement. The ISO/DIS 11146 requires that M^2 be calculated from a series of measurements as shown in figure 1. M^2 is measured on real beams by focusing the beam with a fixed position lens of known focal length, and then measuring the characteristics of the artificially created beam waist and divergence.

To provide an accurate calculation of M^2, it is essential to make at least 5 measurements in the focused beam waist region, and at least 5 measurements in the far field, two Rayleigh ranges away from the waist area. The multiple measurements ensure that the minimum beam width is found. In addition, the multiple measurements enable a “curve fit” that improves the accuracy of the calculation by minimizing measurement error at any single point. An accurate calculation of M^2 is made by using the data from the multiple beam width measurements at known distances from a lens, coupled with the known characteristics of the focusing lens.

M^2 Measurement Solutions

Ophir-Spiricon have a number of solutions for the measurement of M^2 ranging from simple manual processes to fully automated dedicated instruments, depending on the frequency of the need to measure M^2 of lasers and laser systems. We have a system that will meet most needs, whether for research and development of new laser systems, manufacturing quality assurance, or maintenance and service of existing systems.

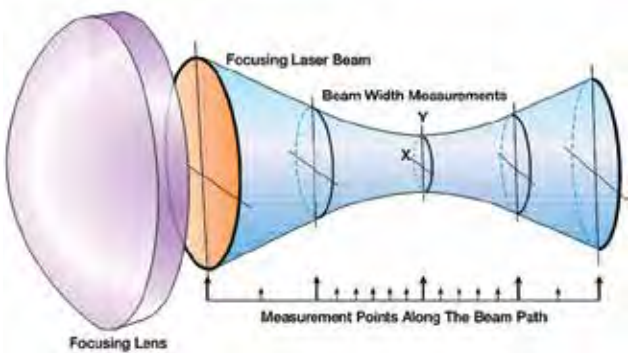

Figure 2 - focusing laser beam

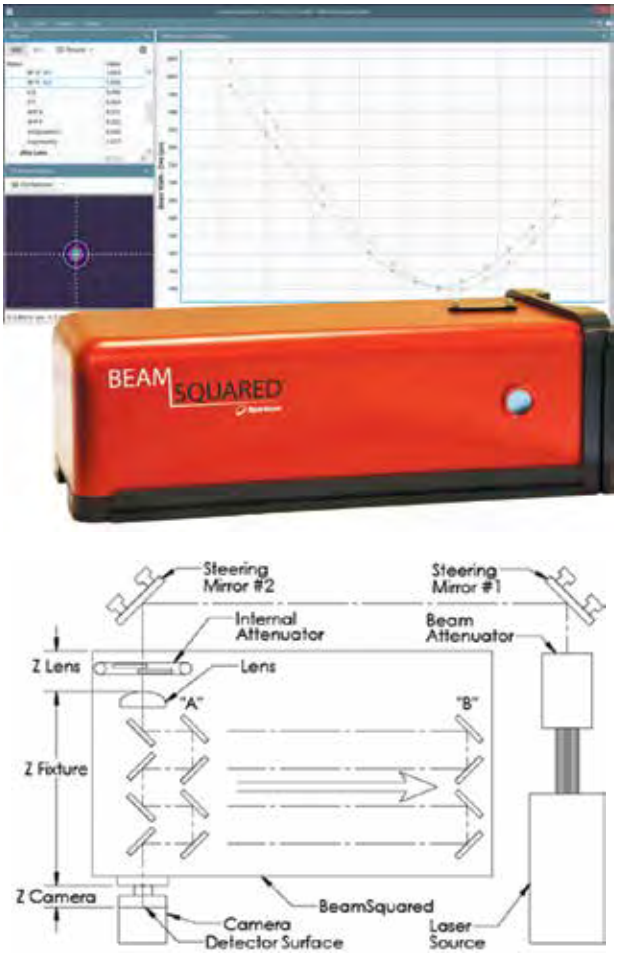
3.7.1 Camera Based Beam Near-Field Propagation Analyzer: M^2

3.7.1.1 BeamSquared®

- ISO compliant
- Automatically measure your beam quality in under 1 minutes
- Tune your laser for best operation
- Specifically developed for continuous usage
- Unequaled accuracy using patented Ultracal™ Calibration
- Long optical train & automatic attenuation adjustment
- Flexible mounting configurations, install horizontal or vertically
- Pulsed and CW for most beam diameters and powers
- Compact and portable
- Detectors from 266nm to 10.6µm



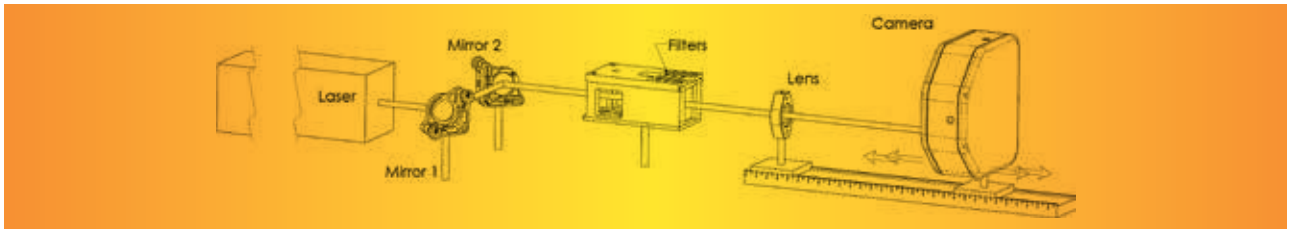
The BeamSquared® system is a compact and fully automated tool for measuring the propagation characteristics of CW and pulsed laser systems from the UV to NIR to Telecom wavelengths. Users can also measure wavelengths above 1.8 microns, including CO_2 and terahertz in manual mode (a bench set-up; without the automated optical train) with a Pyrocam™ IV or IIIHR. Our longer optical train and patented Ultracal™ Calibration makes BeamSquared the most accurate product on the market and is ISO 11146 compliant. Its operational robustness and reliability ensures continuous use applications in industry, science, research and development.

Automatic M^2 - at Production Speeds

The BeamSquared optical train uses a fixed position lens with movable mirrors and camera. The mirrors that direct the focused beam into the camera are moved to precise locations, translating the beam through the near field, the waist, and the far field regions. All these measurements and translations, as well as incremental beam attenuation, are automatically controlled by the BeamSquared software. Design improvements in the BeamSquared system have decreased the measurement reporting time by 2-3 times, making it possible to report M^2 in under a minute.

Manual M^2

Manual mode is available for wavelengths greater than NIR, particularly Terahertz and above, and for beams that are too large or too small for the BeamSquared optical system. Users are required to provide a manual translation/attenuation apparatus.



Software Features

Features	
Measurements	
	M2x, M2y, Kx, Ky, BPPx, BPPy
	Width at waist Wx, Wy
	Divergence angle Qx, Qy
	Waist location Zx, Zy
	Rayleigh X, Y
	Astigmatism
	Asymmetry ratio
	Statistical results are available on all measurements
Supports both automated and manual runs	
New Hardware	
	Camera Options include: SP920, Xeva, Pyrocam™ III HR or IV
	RF Lens Reader
	• Lens must be present for operation
	• Lens configuration data stored with lens (Focal length, calibration wavelength, material, etc.)
	Shutter only open when in live mode
	Table and attenuator calibration at startup (homing before each run)
Supports hardware Trigger	
Faster run times than M2-200s	
New Interface	
	Selectable theme colors
	Splash screen with progress bar
2D display	
	Selectable Color Palette
	Manual Cursor when not running (Cursor at centroid otherwise)
Caustic Display	
	Selecting individual frames
	Auto Aperture
	Exclude points from run
Run Info Display	
	Displays Caution Notice when beams are non-conforming: (too dark, too bright, misaligned, too large or too small)
	Option to ignore misaligned beams
Editable Settings (Wavelength, Laser to box distance, Laser to lens and focal length in manual mode)	
Calculations	
	Frame Results (Total, Min, Peak, % in Aperture, Avg Pwr Density, Beam Width, Centroid, Peak, Cross Sectional Area)

Accuracy by Design

Spiricon products are known for accuracy. Using our patented Ultracal calibration method, auto aperturing to exclude noise beyond the wings of the laser beam, and long optical path, assures the user of the most accurate measurements in the industry.

Designed by Our Customers

Guided by customer input from our widely deployed previous generation M2-200s system, Spiricon redesigned the BeamSquared® to meet the challenging demands of the laser industry. The new BeamSquared system has significantly higher durability and operational robustness for continuous use in a three shifts a day, seven days a week environment. The rigid baseplate and internal optics greatly simplifies and reduces the time for initial set-up and alignment. The lens configuration data is now stored using an RF ID chip embedded in the lens holder which is uploaded automatically by the BeamSquared system when the lens cartridge is inserted in the system, eliminating the need for our customers to keep track of configuration file. Both novice and seasoned users will appreciate these new features along with the time-tested excellence that Spiricon has provided over the years.

Measurements

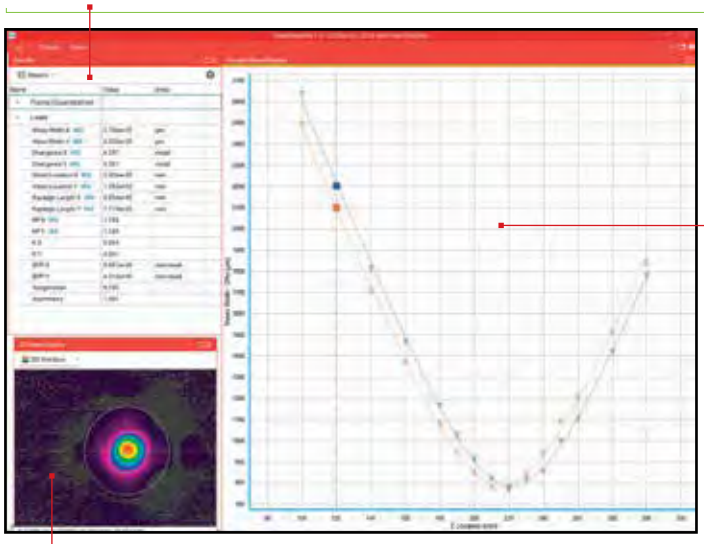
BeamSquared measures propagation characteristics in both the X and Y axes and displays the following parameters:

- Waist diameters
- Full angle Divergences
- Waist locations
- Rayleigh lengths
- M^2 or K and BPP factors
- Astigmatism
- Asymmetry

To optimize bench space, BeamSquared can be mounted either horizontally or vertically. Laser beam input port is the same dimension with either mounting method, X = Y, and the same as the M^2-200s that it is replacing.

Main Screen Functions

This window displays quantitative measurements of the laser parameters. These include the X and Y beam widths, M^2 or K, the divergence angles, the Rayleigh range, and other parameters shown.



This window presents measurements of beam width vs. position for a given run. After measuring a few points, the software extrapolates a curve fit. The Xs and Ys represent individual measurement points. The solid lines present the best fit hyperbola of the beam propagation equation to the measured points. The M^2 and other laser parameters are computed from the best fit hyperbola since it provides a smoothing of the data points.

This window displays the 2D or 3D beam profile of the currently measured point in the beam propagation curve. This image enables visual intuitive verification of the beam profile behavior through focus. After each run the user can click any individual measured point and observe the beam profile. Outlying or anomalous points can be automatically or manually excluded from the curve fit calculations for more accurate results.

Specifications

Model	BSQ-SP920	BSQ-XC130	BSQ-A	BSQ-PY-M
Beam Profiling				
Camera model	SP920	XC130	BeamSquared® software, software license, and optical train, no camera included	Pyrocam™ IIIHR or Pyrocam™ IV
Sensor type	Silicon CCD	InGaAs CCD		Software only, camera and optical train not included. See individual camera data sheets
Wavelengths	266 – 1100nm	900 – 1700nm (1)		
Active area	7.1mm x 5.3mm	9.6mm x 7.6mm		
Elements	1624 x 1224	320 x 256		
Effective pixel	4.4µm x 4.4µm	30µm x 30µm		
Dynamic range	60dB	68dB		
Frame rate	15 fps	100 fps		
Interface	USB 2.0 and 3.0			
Accuracy	±5% typical, ±10% waist location and Rayleigh length typical			
Measurement cycle time	<1 minute typical, depending on setup conditions and operating mode			
Camera attachment	Standard C-mount, 90° camera on axis rotation			
Translation system	Step-motor driven ball screw			
Translation stage resolution	0.05mm			
Standard optics				
Lenses included (2)	266-440nm UV 500mm FL 430-700nm VIS 500mm FL 430-700nm VIS 400mm FL 650-1000nm NIR 400mm FL 1000-1700nm Extended NIR 400mm FL	1000-1700nm Extended NIR 400mm FL 650-1000nm NIR 400 FL	266-440nm UV 500mm FL 430-700nm VIS 500mm FL 430-700nm VIS 400mm FL 650-1000nm NIR 400mm FL 1000-1700nm Extended NIR 400mm FL	N/A

Notes:

(1) For wavelengths between 1300-1400nm inner reflections have been observed that may impact beam measurement
(2) Different lenses are required for different wavelength regions, spot sizes and divergences, Additional lenses must be ordered separately.
(3)For selection of optimal BeamSquared lens, use Beam Profiler Finder.
(4)These lenses have been calibrated for measurement of lasers with Rayleigh length up to 20 meters, for longer Rayleigh lengths, please use Beam Profiler Finder.
(5) CCD cameras can be damaged by power in excess of 0.15 mW/cm² or energy in excess of 1 µJ/cm². BeamSquared employs a focusing optic.
While it may be that the laser input power or energy measures well below this damage threshold, it can easily exceed these levels when focused onto the camera sensor.
Use caution and error on the side of safety. CCD cameras can be costly to repair or replace.
(6) For UV lasers 245-440nm, it is recommended to use the UV reflective ND2 filter P/N SP90568
(7) For the optical train only. The PC computer supplies the power for the system components, such as the CCD camera.
(8) P/N for USA only, for any other country please consult Ophir representative

Accessories Ordering Information

Item	Description	P/N
BSQ-SP920-A	An SP920 camera licensed for BeamSquared®. Sold as an accessory for those also purchasing a BSQ-XC130	**SP90521**
BSQ-Lens Kit 266-1550	Lens kit that includes 5 BeamSquared lenses: 500mm UV, 500mm VIS, 400mm VIS, 400mm NIR, 400mm XNIR	**SP90449**

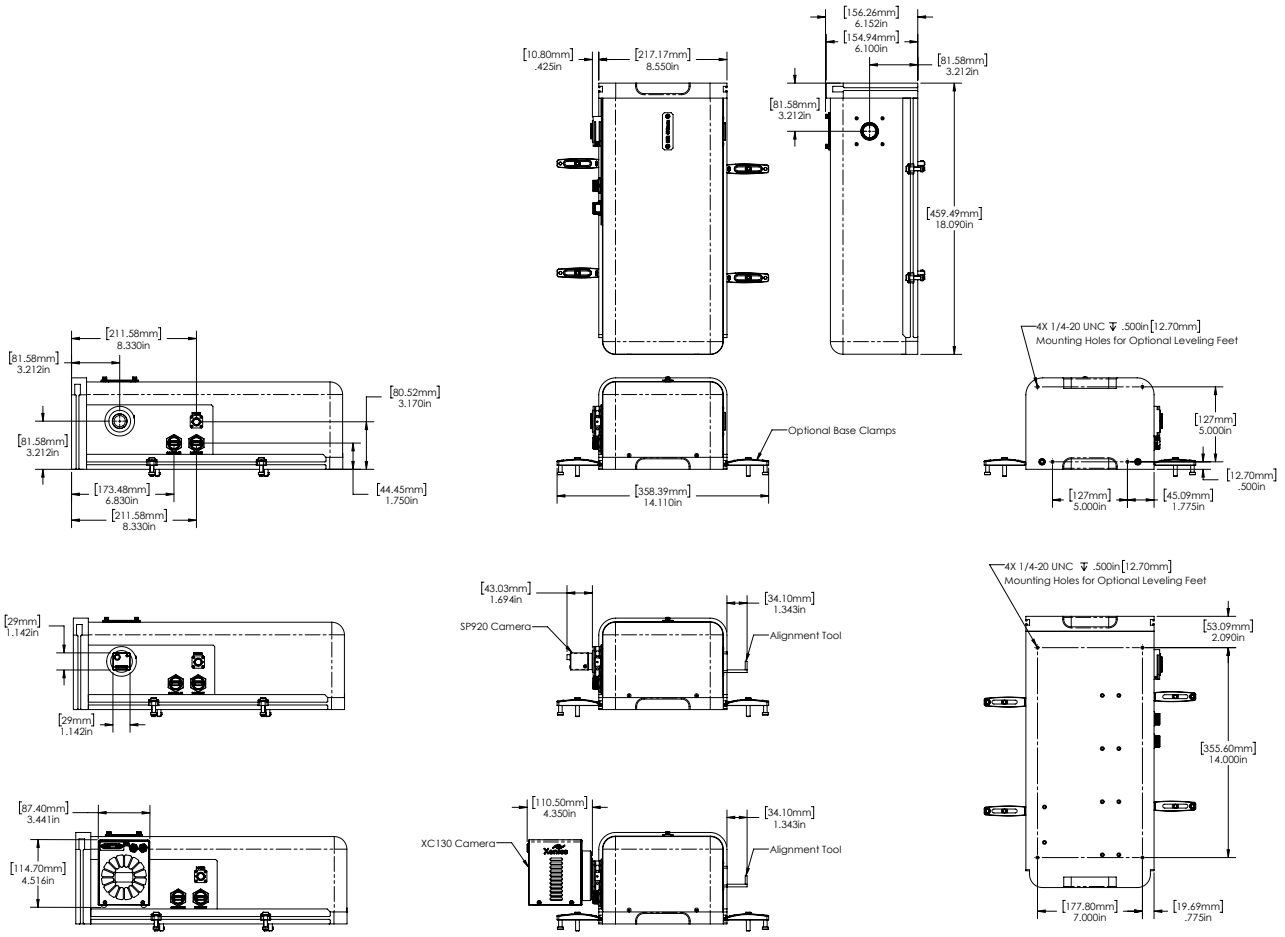
BGP license for BSQ-XC130	Includes BeamGage Professional software license in addition to BeamSquared software license	**SP90508**
BSQ-XC130-KEY	Includes BeamSquard software license for XC-130 camera	**SP90503**
BSQ - UV Reflective Filter	BeamSquared reflective ND2 filter, UV Grade Fused Silica, Inconel coating for 245-440nm	**SP90568**



3.8 BeamWatch® Family

The BeamWatch family of products is the first to make use of Rayleigh scattering measurement to perform non-contact measurement of high power lasers.

3.8.1 Introduction To Rayleigh Scattering Measurement Technology

Disruptive Technology

BeamWatch is the first device to measure a laser without coming in contact with its beam which allows it to be the first laser quality measurement product in history to have no upper limit on the lasers which it can measure. BeamWatch provides high-power industrial laser users with data never before seen such as the dynamic measurement of focus shift caused by thermal effects on the laser system. BeamWatch also provides the industrial laser user with measurement of other key laser operating parameters in real-time.

The system measures the signal generated from Rayleigh scattering around the laser's beam waist, where the power density is the highest. Rayleigh scattering is a physical property of light caused by light scattering off of air molecules. Unlike traditional beam measurement systems, the beam passes directly through BeamWatch and is not disrupted, mechanically or optically. In addition, BeamWatch has no moving parts so there is no need for cooling of any components. Specialized system software dynamically measures the signal multiple times per second, allowing the laser user to key in on critical operational laser attributes, such as beam waist size and position with respect to the material being processed.

BeamWatch User Interface

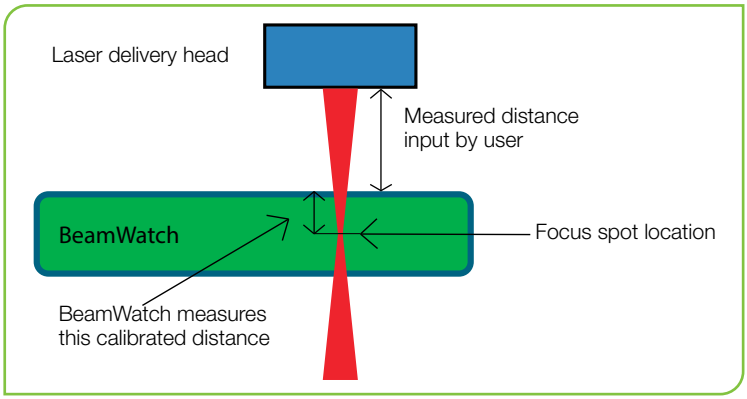
The user has access to those tools needed for start-up and advanced beam diagnostics.

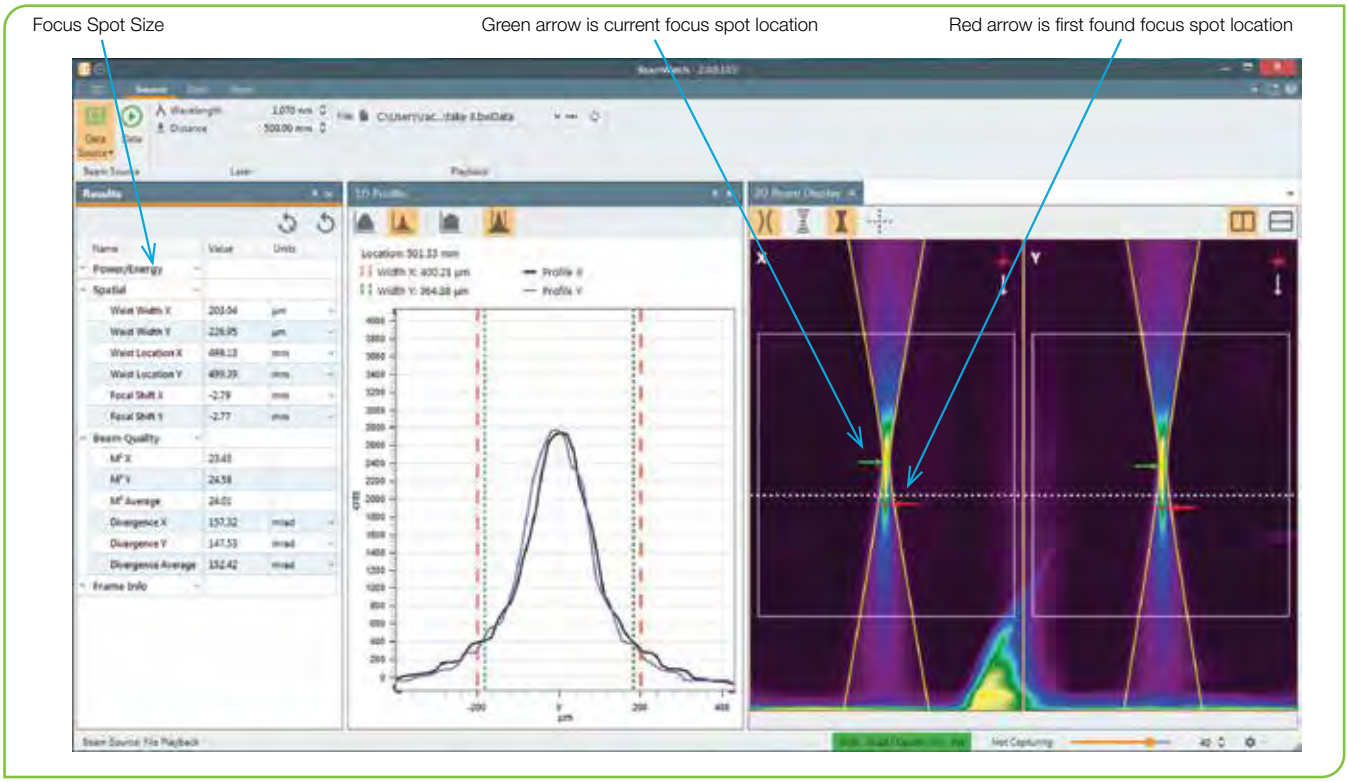
Focus Spot Size (Waist Width)

BeamWatch images the full beam caustic measuring the waist at its smallest point, many times per second.

Focus Spot Location

Now you can precisely know the dynamic behavior of focal spot shift throughout the laser duty cycle. By inputting the known distance from the laser delivery head to a precise datum on BeamWatch the focal spot distance is constantly measured and tracked with millisecond updates.





Assured Process Consistency

Measure as often as needed to assure repeatable and consistent process uniformity. Mount BeamWatch into the process or manually insert BeamWatch and make periodic measurements.
You can also automatically compare to initial process validation measurements and utilize automated pass/fail.

Automation Interface

BeamWatch includes the tools to support Automation Clients written in Visual Basic for Applications (VBA), C++ CLI, or any .Net compliant environment, such as Microsoft Excel or National Instruments' LabVIEW.

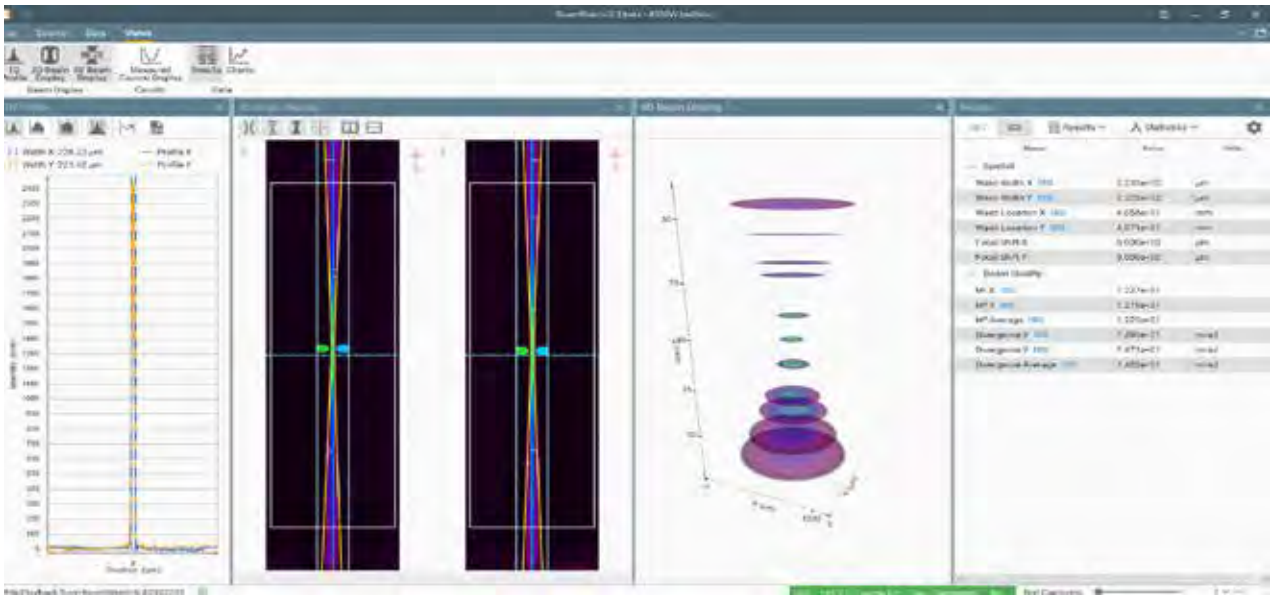
Software Features

Features	Dual Axis
Results - Power/Energy	Relative Power (Absolute Power when configured with Juno and an Ophir Power Meter)
Results - Spatial	Waist Width X & Y
	Waist Location X & Y
	Focal Shift X & Y
	Centroid X & Y
	Width at Cursor X & Y
	Ellipticity at Cursor
	Rayleigh Length X & Y
	Waist to Cursor X & Y
Results - Beam Quality	M^2 X & Y
	M^2 Average
	K X & Y
	K Average
	BPP X & Y
	BPP Average
	Divergence X & Y
	Divergence Average
Results	All results can be shown/hidden.
Frame Info	Frame ID
	Timestamp
1D Profile	Logarithmic or Linear
	Control to enable/disable the beam width markers
	Profiles are drawn at the cursor location. Cursor is controlled in the 2D display
	Display shows current cursor location and width at cursor results
	The X and Y profiles are overlapped in a single display
2D Beam Display	Overlays that can be enabled/disabled
	Fitted caustic and drawn beam area
	Raw data points
	Beam Image
	Alignment Crosshair – Marks the center of the display for each axis
	Beam can be displayed vertically or horizontally on the screen
	Labels indicate X and Y axis and the direction of beam propagation
	Cursor can be moved to any point along the beam
	Focal point indicators – one shows current waist position, another shows first found waist position
Statistics	Mean, Std Dev, Max, Min, and Sample Size
System Requirements	PC computer running Windows 7 (64) and Windows 10 Laptop or Desktop:
	GHz Pentium style processor, dual core recommended
	Minimum 2GB RAM
	Accelerated Graphics Processor
	Hard drive space suitable to hold the amount of video data you expect to store (50-100 GB recommended)

3.8.2 BeamWatch® Non-contact, Focus Spot Size and Position Monitor for high power YAG, Diode and Fiber lasers

- Instantly measure focus spot size
- Dynamically measure focal plane location during start-up
- From 400W and up – no upper limit (So far we have measured up to 100kW)
- Non-contact, laser beam is completely pass-through
- Automation Control Interface for System Integration
- GigE camera interface for local network installation
- Patented

BeamWatch utilizes disruptive technology to measure laser beam characteristics of very high power lasers. By not intercepting the beam and yet providing instantaneous measurements, you can now monitor the beam at frequent intervals without having to shut down the process or remove tooling and fixtures to get access. In addition, you can now measure focal spot location at several times per second and know if there is any focal spot shift during those critical start-up moments.



Specifications

Model	BW-NIR-2-155	BW-NIR-2-55

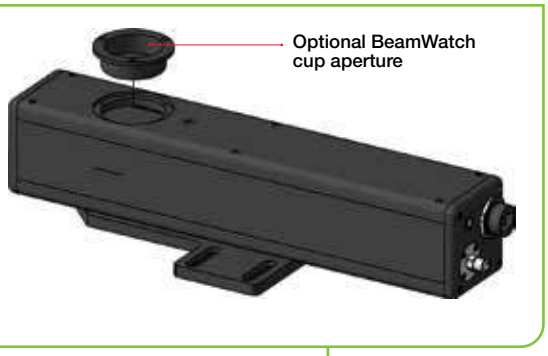
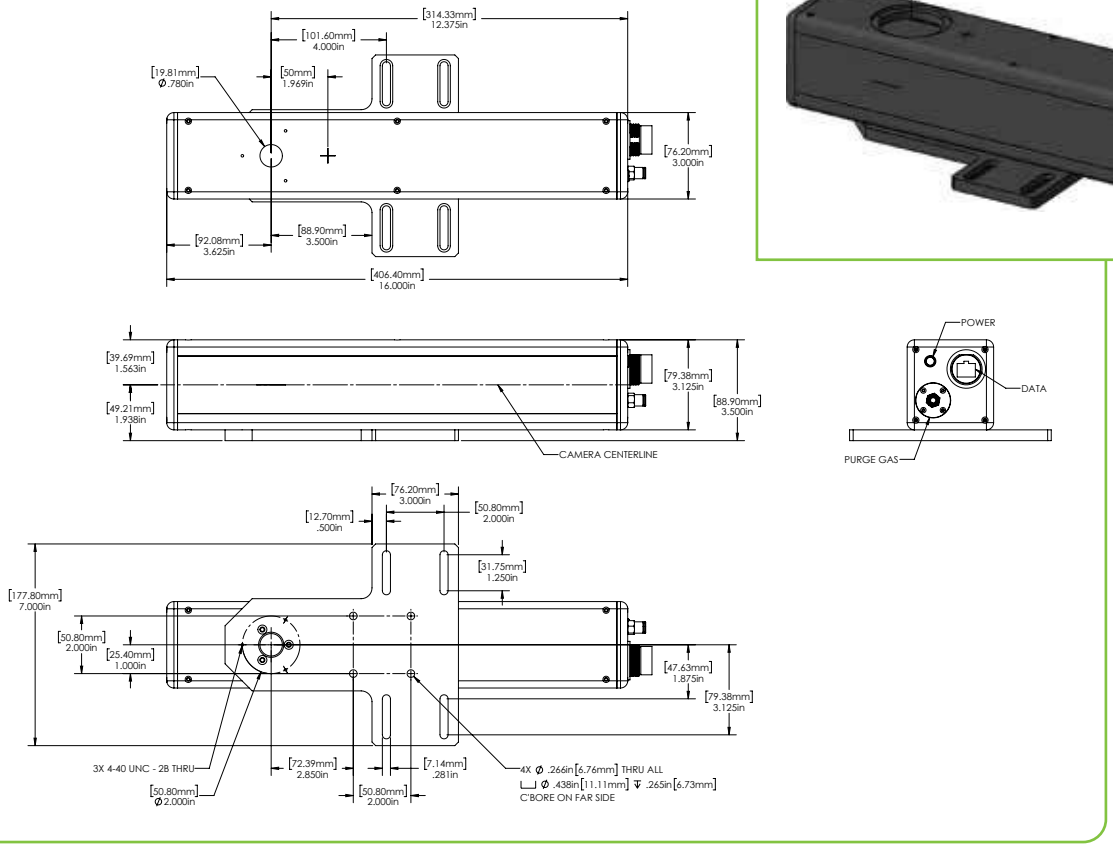
Suggested Add-Ons

Item	Description	P/N
Cup aperture	For those applications where the standard flat aperture does not position the delivery head close enough to the measurement centerline. Includes alignment tool SP90475	**SP90476**
Rotation Mount	Add-on 180° manual rotation mount to bottom of BeamWatch	**SP90346**
Locking Ethernet Cable	Replace standard Ethernet cable with one that locks into place, IP67 rated	**SP90394**
5000W-BB-50	5kW water cooled power sensor	**7Z02754**
10K-W-BB-45-V4	10kW water cooled power sensor	**7Z07102**
30K-W-BB-74	30kW water cooled power sensor	**7Z02757**
120K-W	100kW water circulated power sensor for laser with an approximately Gaussian beam and fiber output	**7Z02691**
Juno	Compact module to operate one Ophir sensor from your PC USB port	**7Z01250**
Vega	Hand held color universal power meter	**7Z01560**



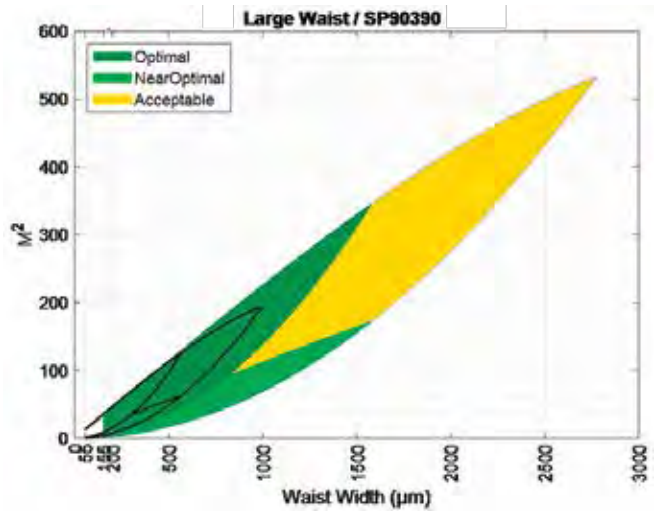


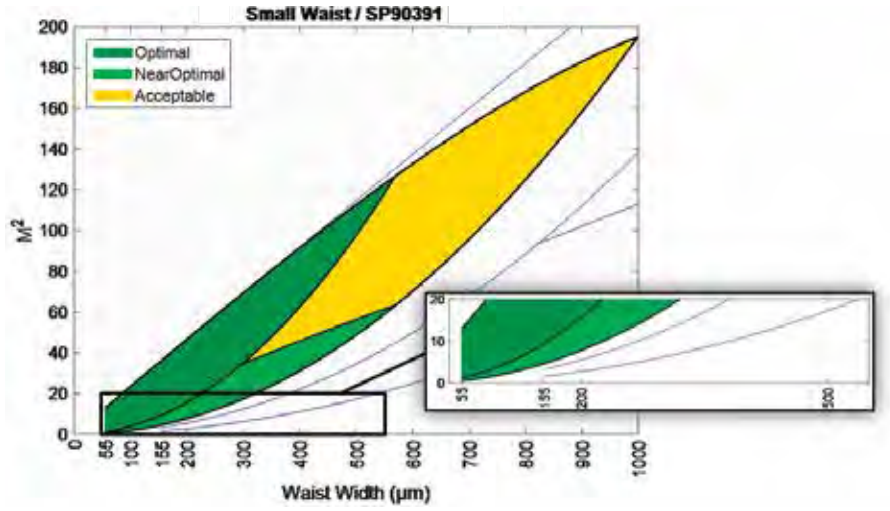
Operating Space Charts

The plots are intended to give a visual indication of the recommended operating space for BeamWatch. If BeamWatch is operated outside of this space, it may be more difficult to see the curvature of the caustic or the beam may be large enough at the edges of the image that it is out of focus.
The maximum waist is dependent on the power density and M^2 of the beam. Specified is a minimum power density of 2 megawatts/cm^2 and the M^2 vs waist width is shown in the corn-looking graphs. Following these charts also covers the 12.5mm max beam size as it enters and exits the unit.

The 12.5mm maximum beam size at entrance and exit is the physical clear aperture of unit, and is the same for all models.

- Optimal has at least 3 Rayleigh lengths on both sides of the waist, with the waist at the center of the image
- Near Optimal has at least 3 Rayleigh lengths on 1 side of the waist, with the waist at the end of the image
- Acceptable has at least 1.5 Rayleigh lengths on both sides of the waist, with the waist at the center of the image





3.8.3 BeamWatch® Integrated - Beam Characterization System for Automated Manufacturing

BeamWatch Integrated is a fully automated laser measurement system designed to measure critical laser beam parameters on industrial production lines.

- Measures all the critical laser beam parameters of the focused beam up to 9999 W power (up to 30 kW on request)
  Measured laser parameters include:
  - Waist (focus spot) width and location
  - Focal shift
  - Centroid
  - M2 or K
  - Divergence
  - Beam parameter product
  - Rayleigh length
  - Beam tilt angle
  - Absolute power
- Fully automated operation
- Trend analysis with good/bad signal
- Detailed report with time stamp
- Ability to work with different types of welding heads w/o changes to the measurement system
- Industrial interface of choice in addition to GigE: PROFINET, EtherNet/IP and CC-Link
- Rugged for industrial production environment
- Short measurement time for frequent measurements during shift operation
- Two options for single-mode or multi-mode lasers available

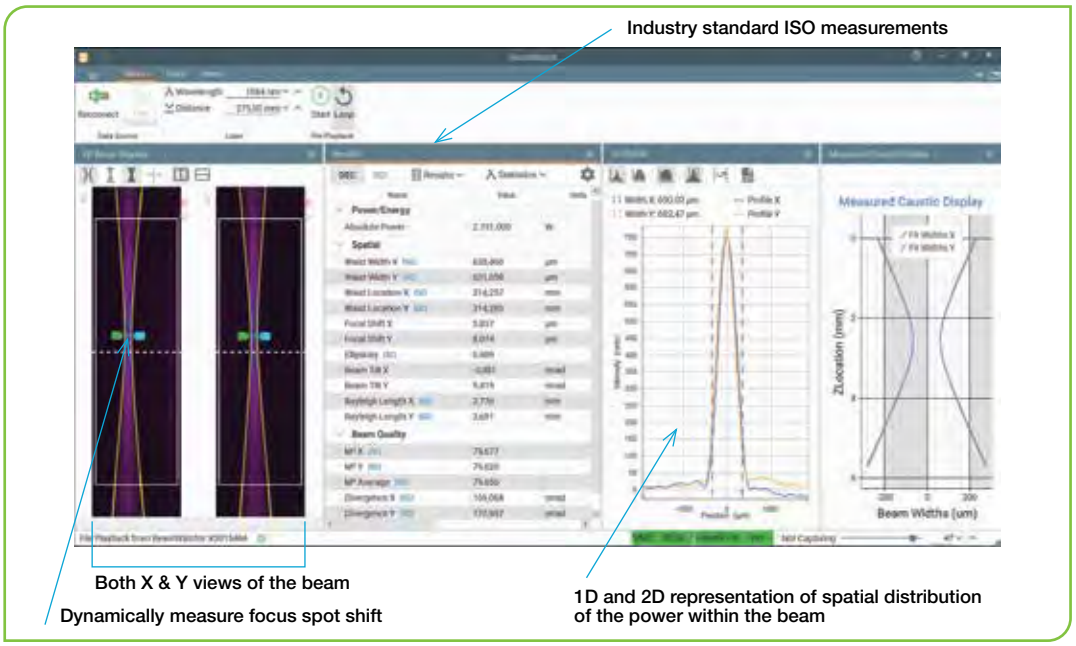
Although ever more powerful cutting and welding laser equipment is being used on modern production lines, all too frequently – due either to lack of time or to the complexity – the quality of the laser beam goes unchecked during the production process. Because laser process quality is directly linked to laser quality, this can lead to large batches of defective parts in high-throughput production lines, e.g. in the automotive industry. In addition to the significantly higher risk of loss or safety issues, neglecting to monitor the quality of the laser beam consistently makes it almost impossible to detect the root cause of problems, when they occur.

To address this issue, BeamWatch Integrated was developed. Based on the patented non-contact BeamWatch measurement principle (using Rayleigh scattering), this technology provides for the simultaneous measurements of multiple profiles along the beam caustic at video rates, delivering – in mere fractions of a second – all the beam key parameters according to ISO 13694 and ISO 11146 standards. Real-time performance also allows for detection of dynamic focal shift, while a NIST-traceable power sensor assures absolute power readings.

With its shutter and rugged design, BeamWatch Integrated is a compact and self-contained system that can accommodate different types of welding heads. A variety of interfaces makes it possible to integrate the system into production networks and automated manufacturing lines to facilitate direct transfer of measurement data.

The short measurement times allow the laser beam to be checked automatically during the loading / unloading phase, as frequently as once every produced unit. Additionally, all parameters can be read out using standard interfaces and – as part of the process monitoring – consistently documented for each individual component, as desired. Since they are based on a large amount of measurement data, trend diagrams are highly accurate and can therefore deliver useful insights for predictive maintenance.

Tolerances and limit values can be set up for measured parameters to trigger corrective actions as needed. BeamWatch Integrated operates virtually without maintenance, because contactless measurement exerts no wear on the instrument.



3.8.3.1 Beamwatch Integrated 150

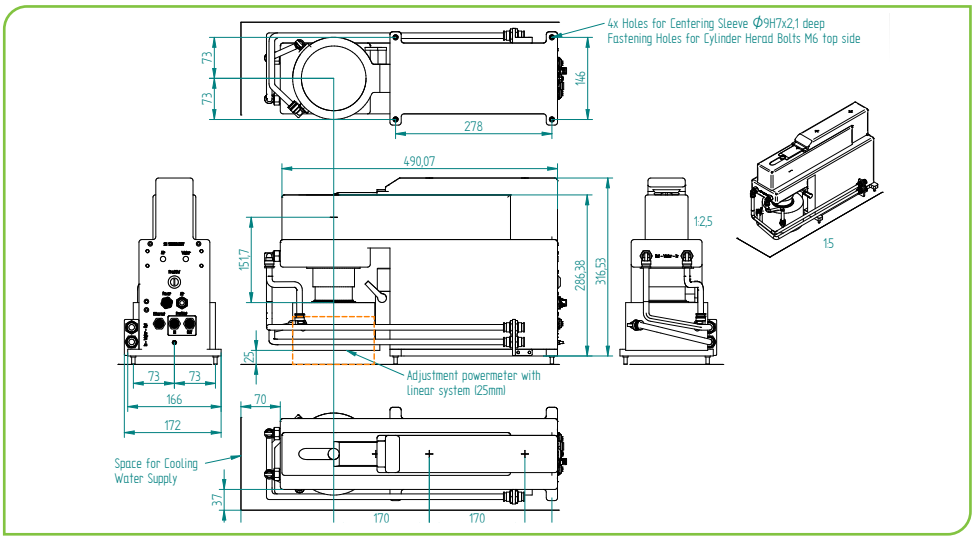
- Automatically measure laser power, caustic and focus shift in real time
- Support multi-mode lasers
- Fully automated operation
- Trend analysis with good/bad signal
- Detailed report with time stamp
- Ability to work with different types of welding heads w/o changes to the measurement system
- Rugged for industrial production environment
- Short measurement time for frequent measurements during shift operation

BeamWatch Integrated with 150-175mm distance between focus position and power meter

Specifications

Model	BW-Integrated-150-NIR-155-Profinet	BW-Integrated-150-NIR-155-Ethernet/IP	BW-Integrated-150-NIR-155-CC-Link
Beam Profiling			
Wavelength	980 - 1080 nm		
Waist width accuracy	±5 %		
Waist location accuracy	±125 µm within the BeamWatch window		
Camera field of view inside the unit	32.17 mm x 8.55 mm		
Maximum entrance/exit beam diameter	12.5 mm		
Focal shift accuracy	±50 µm		
BPP accuracy	±3.5 % RMS		
Divergence accuracy	±3.5 % RMS		
M^2 accuracy	±3.5 % RMS		
Particulate purge	Clean dry gas (Air, Nitrogen, Argon), ~5-10 L/min, 6 bar		
Power Meter			
Power range	500 W - 9999 W (up to 30 kW on request)		
Maximum power density at power meter [1]	Beam diamete / Max power density		
	< 15 mm / 10 kW/cm²		
	15 - 20 mm / 7 kW/cm²		
	20 - 40 mm / 5 kW/cm²		
	40 - 45 mm / 4 kW/cm²		
Power sensor response time	2.7 s max for 9999 W (quicker for less power)		
Backscattered power	< 1 %		
Power noise level	25 W		
Linearity with power	±2 %		
Power accuracy	±5 %		
Software			
BeamWatch Integrated software	PROFINET	EtherNet/IP	CC-Link
	Webinterface or BeamWatch Software		
Output	OK/Warning/NOK values, CSV, PDF and BeamWatch files		
Calibration Certificates			
Power Sensor	NIST traceable		
Camera	Certification		
General			
Communication	PROFINET & GigE	EtherNet/IP & GigE	CC-Link & GigE
Distance between focus and power meter	150-175 mm		
Power supply	24 Volts DC, 5 Amps max		
Water cooling [2]	Clean non-corrosive water, 8 L/min, 18-30 °C, 6 bar, ~2 bar pressure drop		
Weight	~20 kg		
Dimensions	21.78 in x 12.48 in x 6.78 in		
	553 mm x 317 mm x 172 mm		
Compliance	CE, UKCA, China RoHS		
Ordering information			
Part Number	**SP90512**	**SP90528**	**SP90537**

Notes:
(1) For circular beam centered within ¼ of beam diameter. IMPROPERLY CENTERED BEAM CAN CAUSE DAMAGE TO SENSOR. Maximum tilt angle on power sensor ±5 degrees. For rectangular beam please consult MKS Ophir representative
(2) Water temperature rate of change <1°C/min. The recommended flow rate can be lowered proportionately at lower than full power but should not be below 3 liter/min. The response time will be optimum with the recommended flow rate.



3.8.3.2 Beamwatch Integrated 500

- Automatically measure laser power, caustic and focus shift in real time
- Support single-mode lasers
- Fully automated operation
- Trend analysis with good/bad signal
- Detailed report with time stamp
- Ability to work with different types of welding heads w/o changes to the measurement system
- Rugged for industrial production environment
- Short measurement time for frequent measurements during shift operation

BeamWatch Integrated with 500mm distance between focus position and power meter

3.9 Additive Manufacturing Systems

Additive manufacturing (AM) has restructured how prototype, developmental and advanced design mechanical components are made. Direct Laser Melting, Selective Laser Sintering or 3D Metal Printing is quickly becoming the standard for designs that could not be fabricated with traditional metal removing techniques. To create consistent, strong structures using laser-based additive manufacturing processes that meet aviation DOD standards or medical device FDA requirements, the metallurgy must be consistent, and a laser beam of known dimension, power density and focal spot location is required. Quality 3D laser printed processes require a laser delivering the correct amount of power, distributed correctly and focused at the correct location. To insure consistent and structurally sound parts these parameters should be directly measured before and after any critical part is made.

As AM systems have gained in popularity for the mass production of metallic parts, the components produced are becoming larger in size while having finer details.

This requires increasing AM chambers, having larger powder platforms and longer laser focal lengths. Simultaneously, they are equipped with more powerful lasers having smaller focal spots.

Ophir instruments designated for AM systems meet the accuracy requirements of modern AM chambers and lasers, allowing accurate measurement of focal spot size and position, laser profile, and power distribution. They measure how those parameters change with time as well, to assist maintenance of quality and repeatability of the manufactured parts.

Model	BeamPeek™	BeamWatch® AM	BeamCheck™

Beam Profiling and Power Meter for AM Industry

The BeamPeek laser beam profiler and power meter allows simultaneous beam profiling, focal spot analysis, and power measurement of additive manufacturing (AM) lasers.
It integrates both beam profiler, power meter, optical beam sampling system and beam dump.
The electronics, beam splitters, and optics, as well as the SP932U CMOS camera and power meter are safely confined in separate chamber.
The beam dump is integrated into an easily replaceable tray without the need for active cooling using air or water.

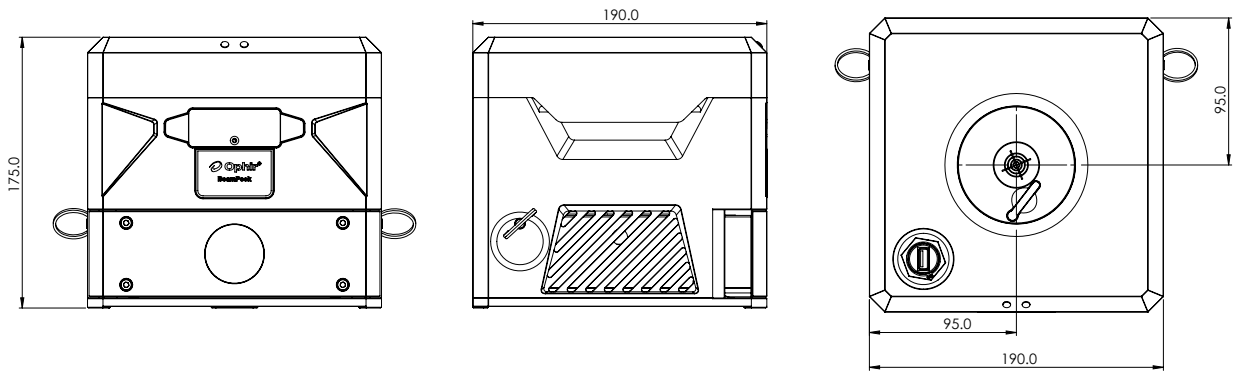
- Focal spot size and position, Laser Beam Profile, and Power
- Multimode and single mode lasers
- Rugged for industrial production environment and metallic powder
- Doesn't require water or air cooling
- Fits AM chambers with 150-800mm focal lengths

BeamPeek

Specifications

Model	BeamPeek
Beam Profiling, Power Meter and Beam Dump	
Wavelengths	532nm, 1030 - 1080 nm
Spot size (min - max)	34.5µm - 2mm
Maximum power	
	Multimode: 1000W
	Single mode: 1000W at 1064nm
	700W at 532nm
Minimum power	10W
Measuring rate	24fps
Maximum spot size at entrance	10mm
Maximum incidence angle	0.5°
Operation time	2 min at 1000W
Camera position from bottom plane (1)	Nominal 76.54mm
Accuracy	±3% at 532nm & 1064nm
	±5% for 1030nm to 1080nm
Response time	<3s
Cooling	Passive
Software	
	BeamGage Professional software
	StarLab, BeamPeek Tools
Calibration Certificates	
Power sensor	NIST traceable
JUNO USB converter	NIST traceable
Camera position from bottom plane (1)	Test Certificate ±100 µm
General	
Communication and power (2)	USB 3.0
Weight	~9.5 kg
Dimensions	190mm x 190mm x 175mm
Compliance	CE, UKCA, China RoHS
Ordering Information	
Part Number	**SP90609**
Notes	(1) Nominal value, may differ from item to item due to assembly and camera tolerances; actual value is on COC, calibration sticker, ± 100µm (2) Comes with 2m cable, 15m active USB 3.0 cable P/N:7E11214 available on request as accessory

BeamPeek Drawing



3.9.2 BeamWatch® AM

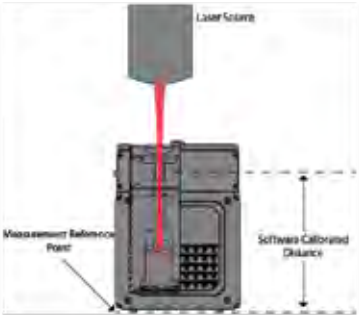
BeamWatch AM provides simultaneous measurements of multiple profiles along the beam caustic in the camera field-of-view (FOV).

Real-time measurements are performed at video rates. They include:

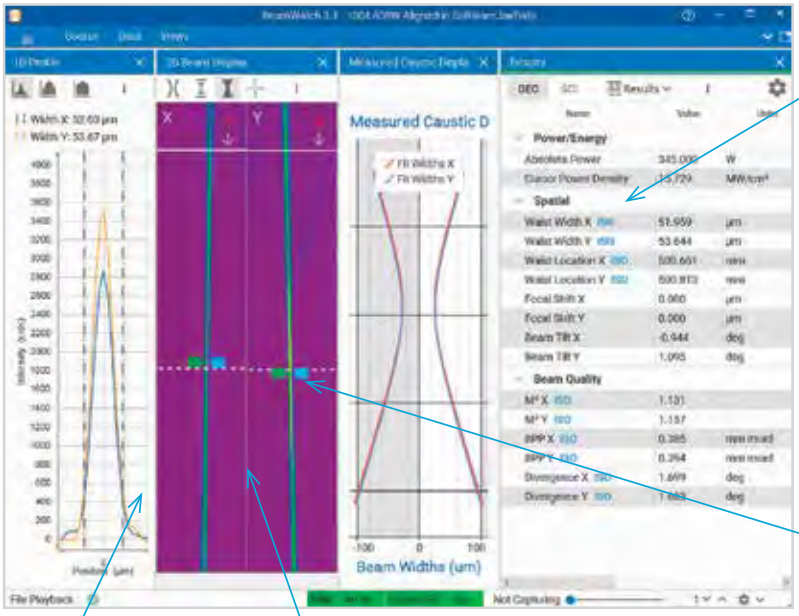
- Waist (focus spot) width and location
- Focal shift
- Centroid
- M^2 or K
- Divergence
- Beam Parameter Product
- Rayleigh length
- Absolute power
- Tilt angle

Real-time performance also allows for measurement of dynamic focal shift during laser startup. BeamWatch AM measurement technique is based on Rayleigh scattering of laser light by oxygen and nitrogen molecules in the air as the beam propagates through the medium. Measurement of this scattered light provides an equivalent slit-scan of the laser beam in the direction of the observed view. The scattered light is measured using a conventional camera and image capture systems. BeamWatch AM includes a camera for spatial measurements and a NIST-traceable power sensor that will provide a complete analysis of the laser power density profile.

The camera is simultaneously, and real-time, viewing the beam caustic including the near/ focus/and far field of the beam. This measurement technique includes Propagation and M2 measurements adhering to the ISO 11146 standards. In addition, and because all measurements are made in real-time, any focal shift occurring during the critical start up seconds is measured and reported. BeamWatch AM has USB connectivity to Windows personal computers for data acquisition, analysis, and display.



Calibrated beam path for precise focus spot location



Industry standard ISO measurements

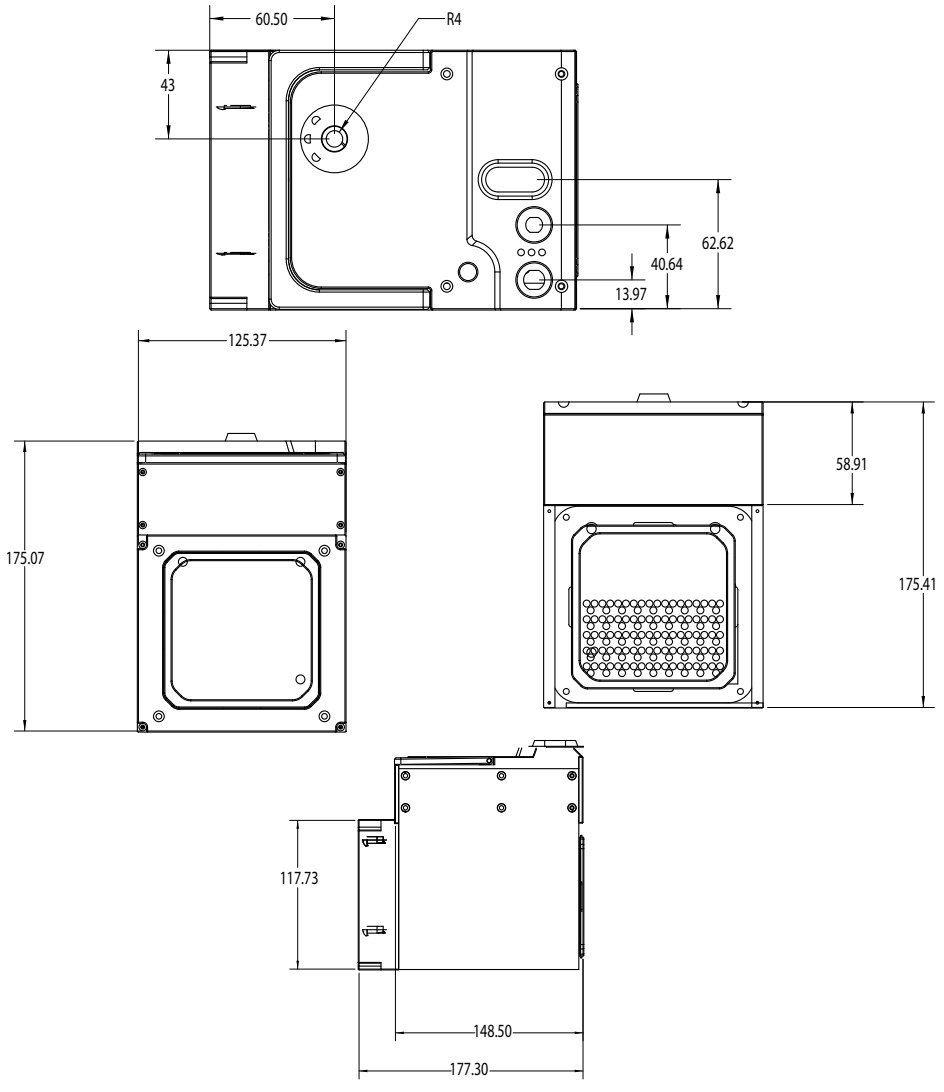
Dynamically measure focus spot shift

Both X & Y views of the beam

1D and 2D representation of spatial distribution of the power within the beam

Specifications

Model	BW-NIR-2-50-AM	
Beam Profiling		
Wavelengths	1060-1080 nm	
Minimum power density	1.5 Megawatts/cm^2	
Minimum focus spot	50 microns	
Maximum beam diameter at entrance/exit	6 mm (4.5 mm using the Halo Aperture)	
ISO 11146 measurements	Self monitoring; will display ISO next to the measurement	
Power Meter/Beam Dump		
Measured power	50 W to 1000 W	
Maximum power exposure	1000 W for 2 minutes	
Precision	NIST traceable calibration, ±3%	
Cool-down time	20 minutes with fan cooling if used to maximum exposure	
Software		
BeamWatch AM software	To run on user supplied PC	
	Data is saved in ASCII and HDF5 formats	
	Print-out of critical measurements and graphics	
Calibration Certificates		
Power sensor	NIST traceable	
JUNO USB converter	NIST traceable	
Camera	Certification	
Distance from bottom of unit to focus location	NIST/National Lab traceable	
General		
Communication to PC	USB 2.0 & USB 3.0	
Power	110 - 220 Volts AC 50/60Hz	
Particulate purge	Clean dry gas	
Weight	17 lbs	
Dimensions	7.03in x 4.96in x 7.16in	
	178.57mm x 126mm x 181.92mm	
Compliance	CE, UKCA, China RoHS	
Ordering Information		
Part Number	**SP90470**	
Accessories		
Turning Cu mirror & springs	Replacement mirror	**SP90611**



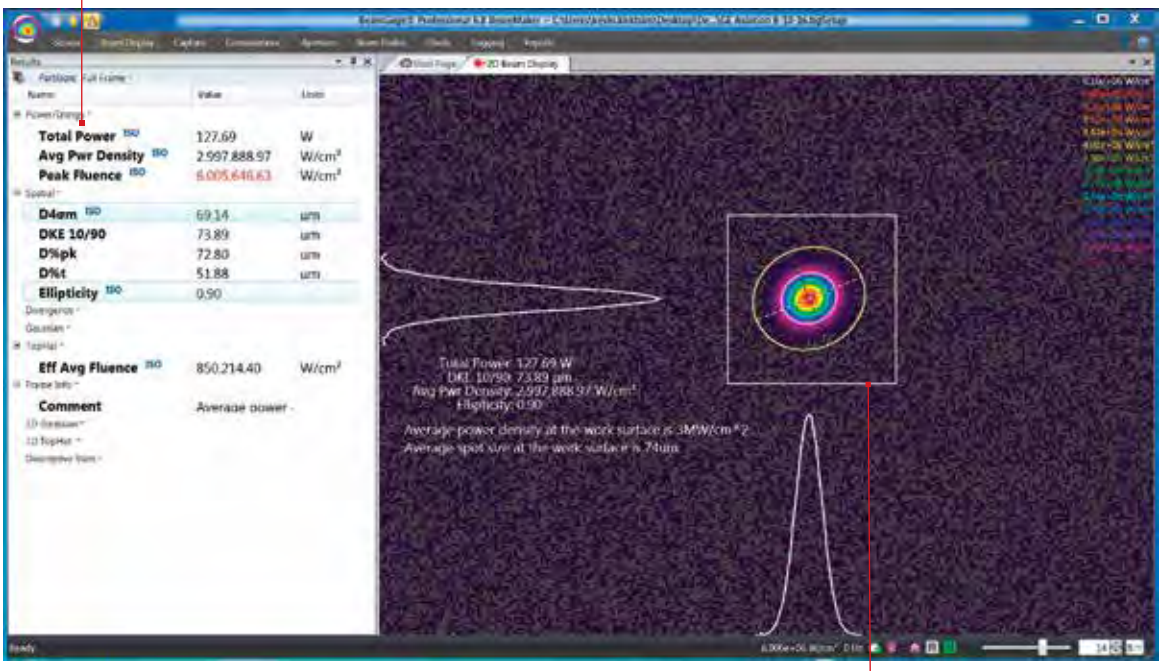
3.9.3 BeamCheck™

- Beam check measures:
  - Focal spot size at the build plane
  - Laser power at the build plane
  - Laser power density at the build plane
  - Changes in spot size & power density over time
- 0.1 to 600 Watt integrated power sensor
- For fiber lasers; 1060 to 1080nm Wavelength
- Power densities to >3MW/cm^2
- Spot sizes – 37um to 3.5mm
- Frame rate – multiple frames per second
- Additive manufacturing system focal length 200mm – >400mm

BeamCheck is an integrated laser measurement system designed to measure critical laser beam parameters for laser-based additive manufacturing systems BeamCheck includes a CCD camera for spatial measurements and a NIST traceable power sensor that will provide a complete analysis of the laser power density profile.

The camera is precisely located at the build plane so that an accurate power density model of the working laser beam can be made. A beam splitter directs a small percentage of the beam to the camera, while the majority of the beam is directed to the integrated power sensor. From these measurements an accurate beam spot size and power density can be derived.

Industry standard ISO measurements



1D and 2D representation of spatial distribution of the power within the beam

BeamCheck Includes

Model	BeamCheck
Beam Profiling	
	SP928 high resolution CCD camera
	• 3.69um square pixel, USB 3.0, multiple frames per second
	CCD is positioned within +/- 50µm of the same distance as the work surface
	LBS-300-NIR laser beam splitter / attenuator
	• Directs the beam to both the camera and power sensor
Power Measurement	
	FL600A-LP2-65 laser power sensor
	• NIST traceable, 600 Watts, fan cooled
	JUNO Smart Sensor to USB Adapter
Software	
	BeamGage Professional Software to run on user supplied PC
	StarLab software to interface power sensor to BeamGage
Data is saved in ASCII and HDF5 formats	
Custom print-out includes;	
	2D False Color Power Density Map
	Total Power
	• NIST/National Lab Traceable certificate
	Beam Diameter (D4sigma, 90/10 Knife Edge, Power-in-a-Bucket)
	Peak Power Density
Calibration Certificates for;	
	FL600A-LP2-65 Power Sensor
	JUNO USB Converter
	SP928 CCD Camera
	Calibration of build plate distance to camera array location
Compliance	CE, UKCA, China RoHS
Ordering Information	
Part Number	**SP90411**
